

# Valid ClaimCenter-Business-Analysts - ClaimCenter Business Analyst - Mammoth Proctored Exam Pass4sure Study Materials

## Professional Proctored Exam Guide

### ClaimCenter Business Analysts

This exam guide is designed to help you evaluate your readiness to successfully complete the Professional certification exam for ClaimCenter business analysts. It includes information about the target audience, required prerequisites, recommended training, and test topics. Guidewire recommends a mix of training, hands-on product experience, and knowledge of best practices to maximize your chances of success on this exam.

#### Target Audience

The Professional Certification - ClaimCenter Business Analyst - Jasper Proctored Exam is recommended for any business analyst who works with ClaimCenter as part of Guidewire InsuranceSuite or Digital implementations. This exam validates that business analysts can interpret a variety of ClaimCenter requirements effectively and efficiently. Those who pass this exam will become a *Certified Professional*, one of two certifications required for business analysts to earn the esteemed *Certified Ace* designation.

#### Why Certify?

Guidewire certifications allow learners to demonstrate increasing competency in their role. The *Certified Professional* designation is a coveted achievement that will help elevate you from the crowd. *Certified Professionals* are more productive, more self-sufficient, and more prepared to capture high-quality requirements that maximize product capabilities.

#### Certification Dependencies

##### Prerequisite Certifications

Business analysts do not need an existing Guidewire certification before they pursue the *Certified Professional* designation. Those who pass the Professional Certification - ClaimCenter Business Analyst - Jasper Proctored Exam will become a *Certified Professional* in the ClaimCenter business analyst track.

ClaimCenter Business Analyst - Mammoth Proctored Exam (ClaimCenter-Business-Analysts) practice test is very customizable and you can adjust its time and number of questions.

## Guidewire ClaimCenter Business Analyst - Mammoth Proctored Exam Sample Questions (Q20-Q25):

### NEW QUESTION # 20

When creating a new Personal Auto claim, Succeed Insurance would like to identify when Rideshare is the primary use for a vehicle. A Business Analyst (BA) thinks that Primary Use already exists as a typekey on the Vehicle Details screen. What are two ways the BA can confirm whether this field is configured in ClaimCenter and, if it is, which values are available in the typelist? (Choose two.)

- A. Access the Guidewire ClaimCenter Application Guide > Go to section on Personal Auto Object Model which lists available entities.
- **B. Open Guidewire Studio for ClaimCenter > Navigate to the Vehicle Details screen > Locate the Primary Use field to view its typelist.**
- C. Log in to ClaimCenter > Create a new Personal Auto claim > Navigate to Vehicle Details > Use keyboard shortcut CTRL + F to find information about the fields on the screen.
- **D. Access the Data Dictionary > Click the Data Entities link > Open the PrimaryUse entity from left-hand pane to view field details on the right pane.**

**Answer: B,D**

Explanation:

To verify the configuration of a specific field and its available values (typelist) within a specific implementation (like Succeed Insurance), a Business Analyst must consult the sources that reflect the current, actual system configuration, not just the out-of-the-box documentation.

\* Option A (Data Dictionary): The Data Dictionary is the definitive, generated documentation of the running application's data model. It lists all entities (such as Vehicle) and their typekeys (such as PrimaryUse). By navigating to the Data Dictionary, a BA can confirm if the field exists in the database schema and view the specific typelist values (e.g., "Rideshare", "Commuting", "Pleasure") associated with it. This is a primary tool for BAs to understand the data structure.

\* Option D (Guidewire Studio): Guidewire Studio is the Integrated Development Environment (IDE) used to configure the application. It contains the "Source of Truth" for all configuration files. A BA (or a developer assisting them) can open the Page Configuration (PCF) files to see the Vehicle Details screen definition or open the typelist files (.tti/.txt) directly to see exactly which values are defined and active.

Why other options are incorrect:

\* Option B (Application Guide): The Application Guide documents the Base (Out-of-the-Box) product features. It does not contain customer-specific customizations or extensions. If "Primary Use" or "Rideshare" were added or modified by Succeed Insurance, the Application Guide would not reflect this.

\* Option C (UI Inspection with CTRL+F): While logging into the application allows a user to see the dropdown on the screen, the shortcut CTRL + F is merely the browser's "Find" function. It searches visible text on the page but does not provide configuration metadata, hidden values, or definitive proof of the underlying data model structure. The correct shortcut for inspecting widget properties in Guidewire is Alt + Shift + I (Location Info), but even that is less efficient for viewing a full typelist than the Data Dictionary or Studio.

### NEW QUESTION # 21

A commercial auto claims group at Succeed Insurance has a large number of overdue activities related to service requests.

Reviewing the distribution of these activities across the team, the supervisor sees that one Adjuster on the team owns only one of these activities, while the other Adjusters own five or six.

To expedite completion of these activities, the Supervisor decides that the Adjuster with one service request activity will handle all of the overdue service activities for the team.

Which screen can the Supervisor use to most efficiently reassign these service request activities?

- A. Search Activities
- **B. Team tab Activities**

- C. Queued Activities
- D. Desktop Activities

**Answer: B**

Explanation:

The Team Tab is the dedicated workspace in ClaimCenter designed for Supervisors and Managers to oversee the workload and performance of their direct reports (groups).

- \* Efficiency: From the Team Activities screen, a supervisor can view all activities assigned to users within their group in a single list.
- \* Functionality: This screen provides built-in filtering (e.g., "Overdue" or "Due Today") and bulk processing capabilities. The Supervisor can select multiple activities currently owned by different adjusters (the ones with five or six items), click the Assign button, and reassign them all to the target Adjuster (the one with only one item) in a single action.
- \* Why it fits: This meets the requirement to "review the distribution" (viewing the team's load) and "reassign" efficiently from one central location.

Why other options are incorrect:

- \* Queued Activities (A) displays items that are sitting in a queue waiting to be picked up; it does not display activities already owned by individual users.
- \* Search Activities (B) allows finding activities but is less efficient because it requires setting up complex search criteria to find the specific group's items, whereas the Team tab is pre-filtered to the supervisor's hierarchy.
- \* Desktop Activities (C) displays the activities assigned to the current user (the Supervisor themselves), not the activities owned by their subordinates.

Here are the 100% verified answers for Question 14 and Question 15 based on Guidewire ClaimCenter Business Analyst documentation.

#### NEW QUESTION # 22

Succeed Insurance has a requirement to add a new high-risk indicator to the Claim Status screen for property claims that have a lien on the property. A new icon will be added to the configuration to provide a visual indicator making it easier for Adjusters and other ClaimCenter users to determine that a claim has a lien.

Which two common areas of the user interface (UI) can display the new lien icon? (Choose two.)

- A. Workspace
- B. Tab Bar
- C. Sidebar
- **D. Screen Area**
- **E. Info Bar**

**Answer: D,E**

Explanation:

In the standard Guidewire ClaimCenter User Interface architecture, high-priority alerts and claim indicators are displayed in two primary locations to ensure visibility:

- \* The Info Bar (Option D): This is the persistent strip located at the top of the claim file (just below the Tab Bar). It remains visible regardless of which specific claim sub-screen (Medical, Financials, Notes) the user is navigating. It is designed specifically to host "High Risk Indicators" such as Litigation, Fatalities, Coverage issues, and in this scenario, a "Lien" indicator. This ensures the adjuster is aware of the critical status immediately upon opening the claim.
- \* The Screen Area (Option A): Specifically, the Claim Status (or Summary) screen—which resides in the main Screen Area—contains a dedicated section for "Claim Indicators." Here, the icon is displayed along with a text description and potential toggle status (On/Off). The prompt explicitly mentions the requirement to "add a new high-risk indicator to the Claim Status screen," confirming the Screen Area as the second location.

Why other options are incorrect:

- \* Sidebar (B): The sidebar (left panel) is used for the "Actions" menu and navigation links (steps) to move between screens. It does not typically host status icons for the claim object itself.
- \* Workspace (C): While "Workspace" can refer to the application frame, in UI terminology, it often refers to the specific worksheets (bottom pane) or the container, not the specific UI element for indicators.
- \* Tab Bar (E): The Tab Bar is for high-level navigation (Claim, Desktop, Administration, Search) and does not display claim-specific data icons.

#### NEW QUESTION # 23

Succeed Insurance has plans to expand operations in Greeley, Colorado. Due to a history of hailstorm related damage in the area,

the company plans to offer reimbursement for hail damage as an option.

Which two actions should the Business Analyst (BA) take to determine the requirements for the project? (Choose two.)

- A. Identify changes to the line of business typelists and determine the correct data mapping.
- B. Author user stories following the elaboration workshops and identify acceptance criteria.
- C. Lead an elaboration workshop with the customer and follow up to identify next steps.
- D. Recommend existing base product features and functionality to expedite the implementation.

**Answer: C,D**

Explanation:

In the Guidewire delivery methodology, the "Determine Requirements" phase (often part of Inception or Elaboration) focuses on understanding the business need and mapping it to the software capabilities.

\* Lead an Elaboration Workshop (A): The Elaboration Workshop is the primary forum where BAs engage with stakeholders (like the Greeley operations team) to discuss the specific needs for the new

"hail damage" product. This is where the raw requirements are gathered, discussed, and refined.

\* Recommend Base Product Features (B): A critical responsibility of the Guidewire BA is to maximize product value by reducing unnecessary customization. When determining requirements for

"reimbursement" and "hail damage," the BA should immediately demonstrate and recommend how ClaimCenter's out-of-the-box Coverage, Exposure, and Incident features can handle this scenario. This aligns the customer's expectations with the standard software capabilities, expediting the implementation.

\* Why not C or D? Authoring user stories (C) and defining typelists (D) are outputs or tasks that occur after the requirements have been determined and the solution approach (Standard vs. Custom) has been agreed upon.

#### NEW QUESTION # 24

Under the Travel loss type, Succeed Insurance offers personal travel policies as part of its travel line of business.

Which two pieces of information in the user interface (UI) will be different for a personal travel claim than for a personal auto or homeowners claim? (Choose two.)

- A. The values displayed in the list of fault ratings
- B. Contact information collected for the insured
- C. The format of the Financial Summary screen
- D. The values displayed in the list of loss causes
- E. Incident types available for recording damage

**Answer: D,E**

Explanation:

Guidewire ClaimCenter is designed to support multiple Lines of Business (LOB), and the User Interface adapts dynamically based on the policy type associated with the claim.

\* Incident Types (Option B): The "Incident" is the object that describes what was damaged or lost.

\* For Auto, the UI displays Vehicle Incidents (describing cars).

\* For Homeowners, the UI displays Dwelling or Fixed Property Incidents.

\* For Travel, the UI will display distinct incident types such as Baggage Incident (for lost luggage) or Trip Cancellation Incident. These are fundamentally different data objects with different fields.

\* Loss Causes (Option C): The Loss Cause typelist is filtered by the Line of Business.

\* Auto claims show causes like "Collision," "Rear-end," or "Theft of Vehicle."

\* Travel claims will show completely different values such as "Trip Delay," "Lost Baggage,"

"Medical Emergency," or "Cancellation."

Why other options are incorrect:

\* Financial Summary (A): The structural format of the Financial Summary screen (displaying Reserve Lines, Payments, and Remaining Reserves) is a core system framework that remains consistent across all lines of business.

\* Contact Information (E): The Contact entity (Name, Address, Phone) is a shared entity. The fields used to capture a person's details are generally the same whether they are a driver, a homeowner, or a traveler.

#### NEW QUESTION # 25

.....

About the oncoming ClaimCenter-Business-Analysts exam, every exam candidates are wishing to utilize all intellectual and technical skills to solve the obstacles ahead of them to go as well as it possibly could. So the pending exam causes a panic among the exam candidates.
