

# Microsoft AZ-104 Practice Test Online & Valid Dumps

## AZ-104 Ebook

### Microsoft AZ-104 practice test questions fully solved & updated 2024

You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups. Another administrator plans to create several network security groups (NSGs) in the subscription. You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks.

Solution: From the Resource providers blade, you unregister the Microsoft.ClassicNetwork provider. Does this meet the goal?

No

You have a Microsoft 365 tenant and an Azure Active Directory (Azure AD) tenant named contoso.com. You plan to grant three users named User1, User2, and User3 access to a temporary Microsoft SharePoint document library named Library1. You need to create groups for the users. The solution must ensure that the groups are deleted automatically after 180 days. Which two groups should you create? Each correct answer presents a complete solution.

Multiple answers

- 1) An office 365 group that uses the Assigned membership type.
- 2) An office 365 group that uses the Dynamic User membership type.

You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

Name	Type	Member of
User1	Member	Group1
User2	Guest	Group1
User3	Member	None
UserA	Member	Group2
UserB	Guest	Group2

User3 is the owner of Group1.

Group2 is a member of Group1.

You configure an access review named Review1 as shown in the following exhibit:

Statements: **Yes or No answer**

User3 can perform an access review of User1: Yes

User3 can perform an access review of UserA: Yes

User3 can perform an access review of UserB: Yes

After paying our AZ-104 exam torrent successfully, buyers will receive the mails sent by our system in 5-10 minutes. Then candidates can open the links to log in and use our AZ-104 test torrent to learn immediately. Because the time is of paramount importance to the examinee, everyone hope they can learn efficiently. So candidates can use our AZ-104 Guide questions immediately after their purchase is the great advantage of our product. It is convenient for candidates to master our AZ-104 test torrent and better prepare for the AZ-104 exam.

The Microsoft AZ-104 exam is intended for administrators who work with Azure and want to demonstrate their expertise in managing and monitoring various Azure services. Microsoft Azure Administrator certification exam covers a broad range of topics, including Azure identity and governance, Azure compute, Azure storage, Azure networking, and Azure monitoring and backup. These topics are crucial for any professional looking to become an Azure administrator.

## Introduction of Microsoft Azure Administrator Exam

Microsoft Certified Solutions Associate (MCSA): Microsoft Azure Administrator is an exam that is used to test your knowledge of designing solutions with Microsoft Azure. Your understanding of the various Azure services and how they work is important if you want to pass this exam. Proficiency with all the Azure services is required. Assessment, App Service, API Management, and Blob Storage are all important for this exam. Proficiency with all of the Azure services is required. The Microsoft AZ-104 test will

measure your knowledge of implementing these different solutions. **Microsoft AZ-104 Exam Dumps** are an important part of obtaining your certification. Mastery of Azure is important in order to achieve the Microsoft AZ-104 certification. Exam preparation is an important part of the test. Rewarding career opportunities and an increase in pay are only a few of the benefits of achieving this certification.

Paths and Domains and Solution and Subscription and Usage and Virtual Machines and Websites all require you to know each of the Azure services. Additionally, Node Manager, Key Vault, Log Analytics, Machine Learning Studio, Network Watcher Replication, OMS Workspace Portal, and Operations Management Suite Workload are all included in this practice exam. Head to head Azure exam prep with these free materials is still the best option. Reach your goal with the certification exam. Workers with this certification are more likely to receive high-paying jobs. Applicants with a Microsoft AZ-104 certification stand out from the crowd. Incredible career opportunities await applicants with the Microsoft AZ-104 certification.

## **Valid Dumps AZ-104 Ebook & AZ-104 Latest Exam Answers**

We aim to provide the best service for our customers, and we demand our after sale service staffs to the highest ethical standard, and our AZ-104 study guide and compiling processes will be of the highest quality. We play an active role in making every country and community in which we selling our AZ-104 practice test a better place to live and work. Therefore, our responsible after sale service staffs are available in twenty four hours a day, seven days a week. That is to say, if you have any problem after AZ-104 Exam Materials purchasing, you can contact our after sale service staffs anywhere at any time.

Passing the Microsoft AZ-104 Exam demonstrates that a candidate has the necessary skills and knowledge to manage Azure services and resources effectively. Additionally, it validates that the candidate has a solid understanding of the Azure platform, including its infrastructure, security, and management tools. With this certification, professionals can prove to their employers that they have the skills and expertise to manage Azure resources and services, which can lead to better career opportunities and higher salaries.

## **Microsoft Azure Administrator Sample Questions (Q405-Q410):**

### **NEW QUESTION # 405**

You have an Azure subscription that contains the resources shown in the following table:

You assign a policy to RG6 as shown in the following table:

To RG6, you apply the tag: RGroup: RG6.

You deploy a virtual network named VNET2 to RG6.

Which tags apply to VNET1 and VNET2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### **Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/tag-policies>

### **NEW QUESTION # 406**

You have a Recovery Services vault named RSV1. RSV1 has a backup policy that retains instant snapshots for five days and daily backup for 14 days.

RSV1 performs daily backups of VM1. VM1 hosts a static website that was updated eight days ago.

You need to recover VM1 to a point eight days ago. The solution must minimize downtime.

What should you do first?

- A. Restore VM1 by using the Replace existing restore configuration option.
- B. Deallocate VM1.
- C. Delete VM1.
- **D. Restore VM1 by using the Create new restore configuration option.**

**Answer: D**

Explanation:

<https://learn.microsoft.com/en-us/azure/backup/backup-azure-arm-restore-vm#restore-options> To recover VM1 to a point eight days ago, you need to use the Azure Backup service to restore the VM from a recovery point. A recovery point is a snapshot of the VM data at a specific point in time. Azure Backup creates recovery points according to the backup policy that you configure for the Recovery Services vault 1.

In this case, the Recovery Services vault named RSV1 has a backup policy that retains instant snapshots for five days and daily backup for 14 days. This means that you can restore the VM from any point in the last 14 days, as long as there is a recovery point available. Since you need to recover VM1 to a point eight days ago, you can use the daily backup recovery point that was created on that day 2.

To restore the VM from a recovery point, you have two options: Replace existing or Create new. The Replace existing option overwrites the existing VM with the restored data, while the Create new option creates a new VM with the restored data. The Replace existing option requires you to deallocate or delete the existing VM before restoring it, which can cause downtime and data loss. The Create new option allows you to restore the VM without affecting the existing VM, which minimizes downtime and data loss 3.

Therefore, the best option is to restore VM1 by using the Create new restore configuration option. This will create a new VM with the same name as VM1 and append a suffix to it, such as -Restored. You can then verify that the new VM has the correct data and configuration, and switch over to it when you are ready. You can also delete the original VM if you don't need it anymore 3.

### NEW QUESTION # 407

You have peering configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: vNET6 only

Box 2: Modify the address space

The virtual networks you peer must have non-overlapping IP address spaces.

References:

<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-manage-peering#requirements-and-const>

### NEW QUESTION # 408

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure virtual machine named VM1 that runs Windows Server 2016.

You need to create an alert in Azure when more than two error events are logged to the System event log on VM1 within an hour.

Solution: You create an event subscription on VM1. You create an alert in Azure Monitor and specify VM1 as the source.

Does this meet the goal?

- A. No
- B. Yes

#### Answer: A

Explanation:

You need to specify Log Analytics as the source for this alert, and not the VM as source for the alert.

1. You create an Azure Log Analytics workspace and configure the data settings.
2. You install the Microsoft Monitoring Agent on VM1.
3. You create an alert in Azure Monitor and specify the Log Analytics workspace as the source.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/platform/agents-overview>

### NEW QUESTION # 409

You have an Azure subscription that contains the virtual machines shown in the following table:

VM1 and VM2 use public IP addresses. From Windows Server 2019 on VM1 and VM2, you allow inbound Remote Desktop connections.

Subnet1 and Subnet2 are in a virtual network named VNET1.

The subscription contains two network security groups (NSGs) named NSG1 and NSG2. NSG1 uses only the default rules.

NSG2 uses the default rules and the following custom incoming rule:

\* Priority: 100

\* Name: Rule1

\* Port: 3389

\* Protocol: TCP

\* Source: Any

\* Destination: Any

\* Action: Allow

NSG1 is associated to Subnet1. NSG2 is associated to the network interface of VM2.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Explanation
