NEW QUESTION # 15
An administrator is scheduling to upgrade Files from version 3.8.1.3 to 4.1.0.2 for all the dark sites.
After transferring the dark site bundle to the internal web server, the administrator performs an LCM inventory but cannot check off the Files upgrade to be performed.
Which component needs to be upgraded along side of the core Files components?

- A. File Analytics
- B. File Server Module
- C. Files Sender

- D. Files Manager

Answer: B

Explanation:
When upgrading Files from version 3.8.1.3 to 4.1.0.2 for all dark sites, the File Server Module component needs to be upgraded alongside the core Files components. This is because the File Server Module is a core component of Files and is responsible for file-level data services, including access control, auditing, and file sharing.
If the File Server Module is not upgraded alongside the core Files components, it can result in compatibility issues and potentially cause the upgrade to fail.
Therefore, it is recommended to upgrade the File Server Module together with the core Files components when upgrading Files.
