

JN0-460 Valid Braindumps Ebook - Your Sharpest Sword to Pass Mist AI Wired, Specialist (JNCIS-MistAI-Wired)

P.S. Free & New JN0-460 dumps are available on Google Drive shared by PDFTorrent: <https://drive.google.com/open?id=1tog-Xcm3MftGa1Y3CVkxWZMyUF2p175v>

We believe that every customer pays most attention to quality when he is shopping. Only high-quality goods can meet the needs of every customer better. And our JN0-460 study materials have such high quality, because its hit rate of test questions is extremely high. Perhaps you will find in the examination that a lot of questions you have seen many times in our JN0-460 Study Materials. In addition, the passing rate is the best test for quality of study materials. And we can be very proud to tell you that the passing rate of our JN0-460 study materials is almost 100 %.

Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Wired Assurance Fundamentals: This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the MistAI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how MistAI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.
Topic 2	<ul style="list-style-type: none">Wired Assurance Management or Operations: This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.
Topic 3	<ul style="list-style-type: none">Campus Fabric Architecture: This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.

Topic 4	<ul style="list-style-type: none"> • Wired Assurance Provisioning or Deployment: This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.
Topic 5	<ul style="list-style-type: none"> • Campus EVPN-VXLAN: This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.

JN0-460 Valid Braindumps Ebook & Free PDF Quiz 2026 Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Realistic Valid Test Syllabus

Are you interested in PDFTorrent JN0-460 pdf torrent? You know, most of IT candidates choose Juniper JN0-460 for preparation for their exam test. Yes, we provide you with the comprehensive and most valid JN0-460 study material. We say valid because we check the update every day, so as to ensure the JN0-460 Exam Dump offered to you is the latest and best. With JN0-460 updated training pdf, you can pass your JN0-460 actual exam at first attempt.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q79-Q84):

NEW QUESTION # 79

You are asked to forward event messages from Mist to an external log collector. In this scenario, which feature would enable this capability?

- A. **syslog**
- B. SNMP traps
- C. NETCONF
- D. webhooks

Answer: A

Explanation:

In Juniper Mist, the **syslog** feature allows administrators to forward event messages and alerts from the Mist cloud to an external syslog server.

This is often used for centralized event monitoring, compliance, and correlation with tools like Splunk or SIEM systems.

Syslog operates over UDP or TCP and can capture switch events, system logs, and Marvis actions for both Wired and Wireless networks.

NEW QUESTION # 80

Which of the following is a feature of using MistAI for Wired Assurance?

- A. Manual data analysis requirements
- B. **Real-time analytics and proactive troubleshooting**
- C. Decreased visibility into client experiences
- D. Increased network downtime

Answer: B

NEW QUESTION # 81

Service level expectations (SLEs) in Wired Assurance are used to: (Select two)

- A. Reduce network security
- B. Increase network downtime
- C. Define network performance metrics
- D. Monitor and ensure network quality

Answer: C,D

NEW QUESTION # 82

What is a limitation of Layer 2 network segmentation?

- A. There is no support for networks larger than a /24 network.
- B. Layer 2 cannot span multiple geographical locations.
- C. There is support for only 4094 VLANs.
- D. There is loop protection.

Answer: C

Explanation:

According to Juniper Networks technical documentation regarding "Bridging and VLANs," Layer 2 network segmentation is primarily achieved through the implementation of Virtual Local Area Networks (VLANs).

While VLANs provide critical segmentation services by grouping related devices into independent logical networks and containing broadcasts within specific domains, they are bound by the architectural constraints of the IEEE 802.1Q standard.

A fundamental limitation of this traditional Layer 2 approach is the address space of the VLAN identifier. The 802.1Q header allocates exactly 12 bits for the VLAN ID (VID). This mathematical constraint limits the total number of possible VLANs to 4,096 (\$2
