

2026 Cisco 350-501: Implementing and Operating Cisco Service Provider Network Core Technologies–High Pass-Rate Reliable Exam Testking

P.S. Free 2026 Cisco 350-501 dumps are available on Google Drive shared by FreeCram: <https://drive.google.com/open?id=1wYGfHCQ38eFUOIBL-BJKzn-qmIXveXSF>

Now you don't need to spend too much time and money preparing for the Cisco 350-501 test. Just get the latest 350-501 exam dumps from FreeCram and prepare the 350-501 test in a very short time. These Customer Experience (Cisco) 350-501 updated dumps will eliminate your risk of failing and enhance your chance of success in the FreeCram test. Using Cisco 350-501 Exam study material you will gain the best Cisco 350-501 exam knowledge and you will attempt the final 350-501 certification test with confidence.

Cisco 350-501 Certification Exam is suitable for professionals with at least three to five years of experience working in service provider network environments. It is also recommended that candidates have a good understanding of Cisco IOS XR software and have experience working with Cisco routers and switches.

Valid 350-501 Test Topics, 350-501 Exams Torrent

The most amazing part of our 350-501 exam questions is that your success is 100% guaranteed. As the leader in this career for over ten years, we have enough strength to make our 350-501 study materials advanced in every single detail. On one hand, we have developed our 350-501 learning guide to the most accurate for our worthy customers. As a result, more than 98% of them passed the exam. On the second hand, our services are considered the best and the most professional to give guidance for our customers.

Conclusion

It is clear that the most suitable IT certifications are subjective and the choice of the best one is connected with your desired career path, your current role, and experience level. However, if your aim is to improve your competence in the field of service provider solutions, Cisco 350-501 is a good test to apply for. Choose the most appropriate track from the options it provides, master the topics diligently, get accredited, and become a source of inspiration to your staff.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q75-Q80):

NEW QUESTION # 75

A mid-size service provider uses L2VPN as its standard for connectivity between offices. A small company wants the service provider to connect the company's two sites across the service provider core. To meet service requirements, the service provider must extend the layer 2 domain between the company's two locations. Which configuration must the engineer apply to implement an attachment circuit between the two sites using a VLAN tag of 12?

- **A. Option C**
- B. Option A
- C. Option B
- D. Option D

Answer: A

Explanation:

The correct configuration for extending the layer 2 domain between the company's two locations involves setting up the interface with L2 transport, specifying the encapsulation method as dot1q with the VLAN tag of 12, and applying the appropriate rewrite ingress tag rules. This setup ensures that the VLAN tag is preserved across the service provider's core, maintaining the layer 2 domain continuity.

NEW QUESTION # 76

Refer to the exhibit:

What is significant about the number 2 in the configuration?

- **A. It is the numeric name of the ACL that contains the list of SNMP managers with access to the agent**
- B. It dictates the number of sessions that can be open with the SNMP manager
- C. It represents the version of SNMP running
- D. It indicates two SNMP managers can read and write with the agent using community string cisco test

Answer: A

Explanation:

The number 2 in the configuration "snmp-server community ciscotest ro 2" is significant because it refers to the numeric name of the Access Control List (ACL) that contains the list of SNMP managers with access to the agent. In this context, "ro" stands for read-only, meaning that SNMP managers listed in ACL 2 can only read data from the SNMP agent but cannot modify it. The ACL defines which IP addresses are allowed to access SNMP data. Reference: Implementing and Operating Cisco Service Provider Network Core Technologies source documents or study guide

NEW QUESTION # 77

Refer to the exhibit. While troubleshooting a connectivity issue on router R2, a network engineer with an employee id: 1234:44:876 notices that although it detects three OSPF links from R1, the OSPF prefixes are missing from the routing table. What is the reason for the problem?

- A. The subnet masks on the serial interfaces are mismatched
- **B. Both loopback interfaces on R1 are configured as stub**
- C. The serial interfaces have different MTUs
- D. The R2 Serial1/0 interface is configured with an IP address, but the R1 Serial1/0 interface is unnumbered

Answer: B

Explanation:

Section: Networking

Explanation/Reference:

NEW QUESTION # 78

Refer to the exhibit.

Router R1 is reporting that its BGP neighbor adjacency to router R2 is down, but its state is Active as shown. Which configuration must be applied to routers R1 and R2 to fix the problem?

A)

B)
C)
D)

- A. Option C
- B. Option A
- C. Option B
- D. Option D

Answer: A

NEW QUESTION # 79

A network engineer is configuring RIP as the routing protocol between multiple PEs and CEs. The engineer must avoid advertising the same routes back to their sources. Which action should be performed on the routers to accomplish this task?

- A. Configure a different route distinguisher for each prefix.
- B. Enable bidirectional forwarding detection on each device.
- C. Define the site of origin on each interface.
- D. Define VRFs on each device to separate the traffic.

Answer: D

Explanation:

To avoid advertising the same routes back to their sources when using RIP as the routing protocol between multiple PEs and CEs, the network engineer should define VRFs (Virtual Routing and Forwarding) on each device. VRFs allow for traffic separation by creating separate routing tables for different VPNs or customers.

By using VRFs, each CE-PE link can be associated with a specific VRF, ensuring that routes are not inadvertently advertised back to their sources. Other options (A, B, and D) are not directly related to this specific requirement.
