As you know, there are many users of Identity-and-Access-Management-Architect exam preparation. But we work high-efficiently 24/7 to give you guidance.

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q19-Q24):

### NEW QUESTION # 19

Universal Containers (UC) has implemented a multi-org architecture in their company. Many users have licences across multiple orgs, and they are complaining about remembering which org and credentials are tied to which business process. Which two recommendations should the Architect make to address the Complaints? Choose 2 answers

- A. Activate My Domain to Brand each org to the specific business use case.
- B. Implement Delegated Authentication from each org to the LDAP provider.

- C. Implement IdP-Initiated Single Sign-on flows to allow deep linking.
- D. Implement SP-Initiated Single Sign-on flows to allow deep linking.

**Answer: A,D**

Explanation:

Activating My Domain allows each org to have a unique domain name that can be branded to the specific business use case<sup>2</sup>. This can help users identify which org they are logging into and avoid confusion. Implementing SP-Initiated Single Sign-on flows enables users to start from a service provider (such as Salesforce) and be redirected to an identity provider (such as Active Directory) for authentication<sup>3</sup>. This can also allow deep linking, which means users can access specific resources within the service provider after logging in<sup>4</sup>. These two recommendations can address the complaints of the users who have licenses across multiple orgs.

#### NEW QUESTION # 20

A multinational company is looking to rollout Salesforce globally. The company has a Microsoft Active Directory Federation Services (ADFS) implementation for the Americas, Europe and APAC. The company plans to have a single org and they would like to have all of its users access Salesforce using the ADFS. The company would like to limit its investments and prefer not to procure additional applications to satisfy the requirements.

What is recommended to ensure these requirements are met?

- A. Configure Each ADFS system under single sign-on settings and allow users to choose the system to authenticate during sign on to Salesforce.
- B. Add a central identity system that facilitates between the ADFS systems and integrate with Salesforce for single sign-on.
- C. Use connected apps for each ADFS implementation and implement Salesforce site to authenticate users across the ADFS system applicable to their geo.
- D. Implement Identity Connect to provide single sign-on to Salesforce and federated across multiple ADFS systems.

**Answer: A**

Explanation:

If an organization has multiple regional ADFS systems and wants one Salesforce org without buying an additional federation broker, Salesforce can be configured with multiple SAML SSO settings so users choose the appropriate identity provider at sign-in. That satisfies the "no additional application investment" constraint more directly than introducing a new central identity broker. Identity Connect is not the solution here because it focuses on AD user synchronization, not on federating multiple ADFS realms into Salesforce login. The architectural compromise is user choice at the login screen, but it keeps the design standards-based and avoids extra infrastructure. For a single-org deployment with multiple existing enterprise IdPs, exposing multiple SSO configurations is the practical native approach. This is why option B is the best answer in Salesforce terms.

#### NEW QUESTION # 21

Universal Containers (UC) has multiple Salesforce orgs and would like to use a single identity provider to access all of their orgs. How should UC's architect enable this behavior?

- A. Ensure that users have the same alias value in their user records in all of UC's Salesforce orgs.
- B. Ensure the same username is allowed in multiple orgs by contacting Salesforce support.
- C. Ensure that users have the same Federation ID value in their user records in all of UC's Salesforce orgs.
- D. Ensure that users have the same email value in their user records in all of UC's Salesforce orgs.

**Answer: C**

#### NEW QUESTION # 22

Universal Containers is implementing a new Experience Cloud site and the identity architect wants to use dynamic branding features as of the login process.

Which two options should the identity architect recommend to support dynamic branding for the site?

Choose 2 answers

- A. An external content management system (CMS) must be used for dynamic branding on Experience Cloud sites.
- B. An experience ID (expid) or placeholder parameter must be used in the URL to represent the brand.
- C. To use dynamic branding, the community must be built with the Visualforce + Salesforce Tabs template.
- D. To use dynamic branding, the community must be built with the Customer Account Portal template.

**Answer: B,D**

**NEW QUESTION # 23**

Universal Containers (UC) wants to provide single sign-on (SSO) for a business-to-consumer (B2C) application using Salesforce Identity.

Which Salesforce license should UC utilize to implement this use case?

- **A. External Identity**
- B. Identity Only
- C. Salesforce Platform
- D. Partner Community

**Answer: A**

**NEW QUESTION # 24**

.....

To help our customer know our Identity-and-Access-Management-Architect exam questions better, we have carried out many regulations which concern service most. You can ask what you want to know about our Identity-and-Access-Management-Architect study guide. Once you submit your questions, we will soon give you detailed explanations.
