Plat-Dev-210 Exam Registration, Plat-Dev-210 Mock Exams

All these three PracticeMaterial Plat-Dev-210 exam questions formats contain valid, updated, and real Salesforce Certified Omnistudio Developer exam questions. The Salesforce Plat-Dev-210 exam questions offered by the PracticeMaterial will assist you in Plat-Dev-210 Exam Preparation and boost your confidence to pass the final Salesforce Plat-Dev-210 exam easily.

Salesforce Certified Omnistudio Developer Sample Questions (Q31-Q36):

NEW QUESTION # 31
An Integration Procedure uses an HTTP action to make a REST API call. The response from the REST API must be converted into a specific XML structure before sending it as an input to another external web service.
How should the developer configure the Integration Procedure to meet this requirement?

- A. Use a Data Mapper Extract and check the XML checkbox on the Output JSON Path.
- B. Use a Data Mapper Transform to convert JSON to XML.
- C. Use a Remote Action that calls the XMLStreamReader class.
- D. Use a Remote Action that calls the XMLStreamWriter class.

Answer: D

Explanation:
OmniStudio does not natively support direct JSON-to-XML transformation using DataRaptors. When a transformation to specific XML formats is needed for integration with external web services, it is recommended to use Remote Actions that invoke custom Apex classes.
* A. Use a Remote Action that calls the XMLStreamWriter class - Correct. The XMLStreamWriter Apex class provides precise control over XML structure and is the Salesforce-recommended way to programmatically generate XML from data within a Remote Action step in an Integration Procedure.
Incorrect Options:
* B. The XML checkbox in DataRaptor does not convert JSON to XML; it defines output data format for display or API serialization.
* C. XMLStreamReader is used for parsing XML, not for generating it.
* D. DataRaptor Transforms only manipulate JSON structure; they do not support converting JSON into XML format.
:
Salesforce Developer Guide # Apex XMLStreamWriter Class
OmniStudio Integration Procedures # Using Remote Actions with Custom Apex

NEW QUESTION # 32
In an OmnoScript, a developer needs to configure a Disclosure element to require user input only if the user already checked a Non-Disclosure Agreement Checkbox.
How should the developer configure the conditional view to meet this requirement?

- A. Disable read only if true
- B. Set element to require if true
- C. Show element if true
- D. Set element to optional if false

Answer: B

Explanation:
Setting the element to require if true allows the developer to configure a Disclosure element to require user input only if a condition is met. In this case, the condition is that the user already checked a Non-Disclosure Agreement Checkbox. The other options are either incorrect or irrelevant for this requirement.

NEW QUESTION # 33
...... configure Additional input to send exactly the same data? Assume that the develop checkedSend Only Additional input.

- A.
- B.
- C.
- D.

Answer: D

Explanation:
Option D is the correct way to configure Additional input to send exactly the same data as Input Data. The Additional input should have the same key/value pairs as Input Data, and the value should be set to
{{InputData.key}} for each key. This will pass the value of Input Data for each key to Additional input.

NEW QUESTION # 34
A developer needs to retrieve data from an external system that stores policy data. The external system supports REST APIs to access and update thepolicies. Due to the volume of the policy data and peak hours of business, calls to the REST APIs sometimes take longer than expected to respond.
The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.
Given theexternal system's known performance issues, which two configurations should be used to implement the call to the external system?

Choose 2 answers

- A. Configure a Remote action with timeout settings of 120000
- B. Check the Chain On Step checkbox on the HTTP Action in the Integration Procedure
- C. Set the Timeout property on the HTTP Action in the Integration Procedure
- D. Check the Chainable checkbox on the Integration Procedure Action in the OmniScript

Answer: B,C

Explanation:
The Timeout property on the HTTP Action in the Integration Procedure specifies how long to wait for a response from the external system before throwing an error. The Chain On Step checkbox on the HTTP Action in the Integration Procedure indicates that the next action should be executed only if the current action is successful. These two configurations should be used to implement the call to the external system given its known performance issues.

NEW QUESTION # 35

Which two of these options can a developer use to retrieve data from a Salesforce object?
Choose 2 answers

- A. Lookup Input Element
- B. Data Mapper Load Action
- C. Data Mapper Extract Action
- D. Data Mapper Post Action

Answer: A,C

Explanation:
To retrieve (read) data from Salesforce objects:
* A. Data Mapper Extract Action - Correct. A DataRaptor Extract is specifically used to retrieve data from Salesforce, based on input parameters or context.
* C. Lookup Input Element - Correct. This is used within OmniScripts to look up a record by matching input data, essentially performing a read operation.
Incorrect Options:
* B. DataRaptor Post is not a valid DataRaptor type.
* D. DataRaptor Load Action is used for writing/updating data, not retrieving it.
