In order to get timely assistance when you encounter problems, our staff will be online 24 hours a day. Regardless of the problem you encountered during the use of GH-200 guide materials, you can send us an email or contact our online customer service. As for the technical issues you are worried about on the GH-200 Exam Questions, we will also provide professional personnel to assist you remotely. And if you have any problem on our GH-200 learning guide, you can contact with us via email or online.

Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.
Topic 2	<ul style="list-style-type: none"> • Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.

Topic 3	<ul style="list-style-type: none"> • Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.
Topic 4	<ul style="list-style-type: none"> • Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.

Save Money and Time with VCE4Dumps Microsoft GH-200 Exam Dumps

The quality of our Microsoft GH-200 training material is excellent. After all, we have undergone about ten years' development. Never has our practice test let customers down. Although we also face many challenges and troubles, our company get over them successfully. If you are determined to learn some useful skills, our Microsoft GH-200 Real Dumps will be your good assistant. Then you will seize the good chance rather than others.

Microsoft GitHub Actions Sample Questions (Q69-Q74):

NEW QUESTION # 69

As a developer, you need to integrate a GitHub Actions workflow with a third-party code quality provider that uses the Checks API. How should you trigger a follow-up workflow?

- A. Add the `check_run` webhook event as a trigger for the workflow when the code quality integration is completed
- B. Add the `workflow_run` webhook event as a trigger for the workflow for the code quality integration name
- C. Add the `deployment` webhook event as a trigger for the workflow when the code quality integration is completed
- D. Add the `pull_request` webhook event as a trigger for the workflow when the code quality integration is synchronized

Answer: A

Explanation:

The `check_run` event is triggered when a check (such as a code quality check) completes, including when the status of a check changes. By adding this event as a trigger, you can initiate a follow-up workflow when the code quality integration finishes its checks.

Reference:

<https://docs.github.com/en/actions/reference/workflows-and-actions/events-that-trigger-workflows>

NEW QUESTION # 70

Which syntax correctly accesses a job output (`output1`) of an upstream job (`job1`) from a dependent job within a workflow?

- A. `${{depends.job1.output1}}`
- B. `${{needs.job1.output1}}`
- C. `${{needs.job1.outputs.output1}}`
- D. `${{job1.outputs.output1}}`

Answer: C

Explanation:

The `needs` context is used to reference the outputs of jobs that are dependencies of the current job. In this case, `needs.job1.outputs.output1` correctly accesses the output of `output1` from the job `job1` in the dependent job.

NEW QUESTION # 71

You need to make a script to retrieve workflow run logs via the API. Which is the correct API to download a workflow run log?

- A. GET /repos/owner/repo/actions/runs/run_id/logs
- B. GET /repos/owner/repo/actions/artifacts/logs
- C. POST /repos/owner/repo/actions/runs/run_id/logs
- D. POST /repos/owner/repo/actions/runs/run_id

Answer: A

Explanation:

REST API endpoints for workflow jobs

You can use the REST API to view logs and workflow jobs in GitHub Actions.

Download job logs for a workflow run

Gets a redirect URL to download a plain text file of logs for a workflow job.

Code samples for "Download job logs for a workflow run"

Request example

Get /repos/{owner}/{repo}/actions/jobs/{job_id}/logs

Reference:

<https://docs.github.com/en/rest/actions/workflow-jobs>

NEW QUESTION # 72

Which repository files are required for a Docker container action and for a JavaScript action to run correctly? (Choose 3)

- A. package.json
- B. Container action Dockerfile
- C. Action metadata file action.yml or action.yaml
- D. JavaScript entry file such as main.js or index.js

Answer: B,C,D

Explanation:

The correct options are JavaScript entry file such as main.js or index.js, Action metadata file action.yml or action.yaml, and Container action Dockerfile.

The Action metadata file action.yml or action.yaml is mandatory because it declares inputs and outputs and it instructs GitHub how to run the action. Both JavaScript and container actions rely on this metadata to execute correctly.

For a JavaScript action the JavaScript entry file such as main.js or index.js is the script that the runner executes as directed by the metadata. GitHub expects a committed distributable script, so the entry file must be present in the repository.

For a container action the Container action Dockerfile defines how to build the image and what command to run, which makes the Dockerfile required for the action to work.

NEW QUESTION # 73

GitHub-hosted runners support which capabilities? (Each correct answer presents a complete solution. Choose two.)

- A. requiring a payment mechanism (e.g., credit card) to use for private repositories
- B. automatic file-system caching between workflow runs
- C. automatic patching of both the runner and the underlying OS
- D. support for a variety of Linux variations including CentOS, Fedora, and Debian
- E. support for Linux, Windows, and macOS

Answer: C,E

Explanation:

[A, not B] Each GitHub-hosted runner is a new virtual machine (VM) hosted by GitHub with the runner application and other tools preinstalled, and is available with Ubuntu Linux, Windows, or macOS operating systems.

[E] When you use a GitHub-hosted runner, machine maintenance and upgrades are taken care of for you.
