Salesforce Certified Administrator Sample Questions (Q29-Q34):

NEW QUESTION # 29

What is the click path to enable Enhance Profile Management?

- A. Setup | Profiles | Customize
- B. Setup | Manage Users | Profiles
- C. Setup | Customize | User Interface

Answer: C

Explanation:

Section: Volume C

NEW QUESTION # 30

DreamHouse Realty has an approval process. A manager attempts to approve a record but receives an error. What should a Platform Administrator do to troubleshoot this issue?

- A. Review the page layout to ensure the fields updated in the process are visible.
- B. Update the field-level security to view on fields that are updated in the process.
- **C. Check if the user in the next approver is inactive or missing.**
- D. Add a delegated approver for the next approver in the process.

Answer: C

Explanation:

A common cause of errors in an Approval Process is a breakdown in the "Approver" chain. If an approval step is configured to route to a specific user or a manager who has been deactivated, Salesforce will throw an error when the current step tries to advance. The Platform Administrator should check the "Next Approver" field on the record or the step definition in Setup to ensure the target user is active and has a valid Salesforce license. While field visibility (Options B and C) is important for the user experience, missing field access typically doesn't "error out" the approval engine itself; it just prevents the user from seeing the data. Checking for inactive users is the first step in troubleshooting runtime errors in automated routing processes.

NEW QUESTION # 31

Cloud Kicks is introducing a new shoe model and wants to advertise on TV, radio, print, and social under the banner of a called New Runners. In addition, total statistics for this marketing effort need to be aggregated and visible. Which feature should the administrator use to implement this functionality?

- A. Master-detail relationship
- B. Lookup relationship
- **C. Parent campaign field**
- D. Junction object

Answer: C

Explanation:

To advertise on TV, radio, print, and social under one banner called New Runners and aggregate total statistics for this marketing effort, an administrator should use Parent campaign field on Campaign object. This field allows creating hierarchical relationships between campaigns by specifying one campaign as parent of another campaign. Parent campaigns roll up statistics from child campaigns such as number of leads generated, amount of revenue won etc. For example, an administrator can create four child campaigns for TV, radio, print and social ads respectively and link them to one parent campaign called New Runners using Parent campaign field. Junction object, lookup relationship, and master-detail relationship are not features related to Campaign object or hierarchy. References:
