Top Features of Oracle 1z0-1075-25 Exam Practice Questions

With the rapid development of the world economy, it has been universally accepted that a growing number of people have longed to become the social elite. The 1z0-1075-25 latest study guide materials will be a shortcut for a lot of people who desire to be the

social elite. If you try your best to prepare for the 1z0-1075-25 Exam and get the related certification in a short time, it will be easier for you to receive the attention from many leaders of the big company like us, and it also will be very easy for many people to get a decent job in the labor market with the help of our 1z0-1075-25 learning guide.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which three can you set as Overcompletion Tolerance Type and its value for a subcomponent yield, so that the job order can report the excess production completion?

- A. Overcompletion Tolerance Type = Percentage; value = 100
- B. Overcompletion Tolerance Type = Percentage; value = 0
- C. Overcompletion Tolerance Type = Amount; value = 0
- D. Overcompletion Tolerance Type = Amount; value > 0
- E. Overcompletion Tolerance Type = Percentage; value > 0

Answer: A,D,E

Explanation:

In Oracle Manufacturing Cloud, overcompletion tolerance allows for the reporting of excess production completion beyond the planned amount. The overcompletion tolerance type and value determine how much extra production can be reported:

- * Percentage, value = 100 allows the system to accept overcompletion of up to 100% more than the planned quantity.
- * Amount, value > 0 specifies a fixed amount by which overproduction can be tolerated.
- * Percentage, value > 0 allows overproduction by a percentage greater than 0 but less than 100.

Incorrect settings:

- * A : Setting the percentage to 0 means no overcompletion is allowed.
- * C : An amount of 0 also means no excess production can be reported.

Oracle Cloud ' s work order management guide explains how to configure overcompletion tolerance types and values for accurate reporting of production.

NEW QUESTION # 42

You are defining a standard operation for visual inspection. You want the completion of this standard operation to be reported in all work orders that reference it.

Which setup task must you perform to achieve this?

- A. Select the Automatically Transact check box while defining the standard operation.
- B. Select the Count Point check box while defining the standard operation.
- C. Deselect the Count Point check box while defining the standard operation.
- D. Ensure that the Charge Type of the resource is Automatic.

Answer: B

NEW QUESTION # 43

Which statement is NOT true about cumulative lead time?

- A. It updates the item ' s lead time attributes at the end of the calculation process: cumulative manufacturing and cumulative total lead times.
- B. It updates lead time percent at the operation level in the work definition.
- C. It calculates cumulative manufacturing lead times by rolling up manufacturing lead times of make items.
- D. It calculates cumulative total lead times by rolling up lead times of make items and adding up lead time values of buy items.

Answer: B

Explanation:

Cumulative lead time is a key concept in Oracle Manufacturing Cloud, where it calculates the total time required to manufacture an item. The following points clarify the calculations:

* Statement D is incorrect because cumulative lead time does not update the lead time percent at the operation level in the work definition. Instead, cumulative lead time focuses on rolling up the lead times of both make and buy items to provide an overall lead

time for the entire production process.

Correct Statements:

* Statement A : The system calculates cumulative manufacturing lead time by summing up the lead times of all make items in the production process.

* Statement B : At the end of the cumulative lead time calculation process, it updates the lead time attributes of the item, specifically cumulative manufacturing and cumulative total lead times.

* Statement C : Cumulative total lead time includes both make and buy item lead times, representing the complete production cycle from procurement to manufacturing.

Oracle Cloud SCM guide on "Lead Time Calculations " explains how cumulative lead times are calculated and updated but does not mention lead time percent at the operation level.

NEW QUESTION # 44

Your customer needs to add additional information to their work order traveler. Which statement is NOT true about the Extensible Work Order Traveler?

- A. It is a critical document that travels with the physical material during production.
- B. You use Page Composer to display only the required actions.
- C. Operators can invoke it by using the Generate Extensible Work Order Traveler Report task.
- **D. You can generate the Extensible Work Order Traveler report only from the Review Dispatch List and Manage Supplier Operations pages.**
- E. The production operator can invoke It from the Manage Work Orders, Review Dispatch ust. and Manage Supplier Operations pages.

Answer: D

Explanation:

The Extensible Work Order Traveler is a customizable report that contains detailed information about a work order and travels with the physical material during production. The statement that is not true is:

* Statement A is incorrect because the Extensible Work Order Traveler report can be generated from multiple locations within Oracle Manufacturing Cloud, including the Manage Work Orders, Review Dispatch List , and Manage Supplier Operations pages. It is not limited to only the Review Dispatch List and Manage Supplier Operations pages.

Correct statements:

* Statement B : The Extensible Work Order Traveler is a critical document used to communicate work order details during the production process.

* Statement C : Production operators can invoke the traveler from several key pages like Manage Work Orders and Review Dispatch List.

* Statement D : Operators can use the task "Generate Extensible Work Order Traveler Report " to invoke the report.

* Statement E : You can use Page Composer to customize the Extensible Work Order Traveler and display only the required actions, allowing flexibility in what information is presented.

Oracle Cloud documentation on the Extensible Work Order Traveler explains how the report can be invoked from various areas within the application and how it can be customized using Page Composer.

NEW QUESTION # 45

Your customer runs two daily shifts in their plant: morning shift and evening shift. A resource, LATHE, is assigned to the work center W1. There are five units of LATHE available, of which three units are available for the morning shift and the remaining units for the evening shift.

Which two actions must the customer perform to associate LATHE with W1?

- A. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter 40% against LATHE In the Evening Shift column.
- **B. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter ~z against LATHE in the Evening Shift column,**
- **C. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter 3 against LATHE in the Morning Shift column.**
- D. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter 60% against LATHE in the Morning Shift column.
- E. Select the Available 24 Hours check box and, in the Resource Availability region, enter 3 against LATHE In the Morning Shift column.

- F. Select the Available 24 Hours check box and, in the Resource Availability region, enter 2 against LATHE in the Evening Shift column.

Answer: B,C

Explanation:

To allocate specific units of the LATHE resource to morning and evening shifts in Oracle Manufacturing Cloud, you need to configure the resource availability per shift as follows:

- * Deselect the Available 24 Hours check box - This ensures that the resource availability is limited to specific shifts instead of being available 24/7.
- * Enter 3 in the Morning Shift column - Assigning 3 units of LATHE to the morning shift allocates those units for use only during the morning.
- * Enter 2 in the Evening Shift column - Assigning 2 units to the evening shift ensures that the remaining LATHE units are available for the evening shift.

Oracle Cloud SCM documentation details how to manage Resource Availability for specific shifts by configuring the number of units assigned to different shifts in a work center.

NEW QUESTION # 46

.....

Under the tremendous stress of fast pace in modern life, this version of our 1z0-1075-25 test prep suits office workers perfectly. It can match your office software and as well as help you spare time practicing the 1z0-1075-25 exam. As for its shining points, the PDF version can be readily downloaded and printed out so as to be read by you. It's really a convenient way for those who are fond of paper learning. With this kind of version, you can flip through the pages at liberty and quickly finish the check-up 1z0-1075-25 Test Prep. What's more, a sticky note can be used on your paper materials, which help your further understanding the knowledge and review what you have grasped from the notes. While you are learning with our 1z0-1075-25 quiz guide, we hope to help you make out what obstacles you have actually encountered during your approach for 1z0-1075-25 exam torrent through our PDF version, only in this way can we help you win the 1z0-1075-25 certification in your first attempt.
