Die Prüfungsfragen und Antworten von DeutschPrüfung Salesforce Plat-Admn-202 bieten Ihnen alles, was Sie zur Prüfungsvorbereitung brauchen. Für Salesforce Plat-Admn-202 Prüfung können Sie auch Lernhilfe aus anderen Websites oder Büchern finden. Aber Hauptsache ist es, sie müssen logisch verbinden. Unsere Salesforce Plat-Admn-202 Zertifizierungsantworten ermöglichen es Ihnen, mühelos die Prüfung zum ersten Mal zu bestehen. Zugleich können Sie auch viele wertvolle Zeit sparen.

Salesforce Plat-Admn-202 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> • Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Thema 2	<ul style="list-style-type: none"> • Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.

Thema 3	<ul style="list-style-type: none"> • Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Thema 4	<ul style="list-style-type: none"> • App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Thema 5	<ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.

Plat-Admn-202 Prüfungsfragen - Plat-Admn-202 Lernhilfe

Sie haben einen großen Traum. Sie können viele Materialien zur Vorbereitung finden. Unsere Fragenkataloge zur Salesforce Plat-Admn-202 Zertifizierungsprüfung können Ihren Traum verwirklichen. Die Fragen und Antworten zur Salesforce Plat-Admn-202 Zertifizierungsprüfung von DeutschPrüfung werden von den erfahrungsreichen IT-Fachleuten bearbeitet. Mit unseren Produkten können Sie alle Probleme versuchen. Wir würden Ihnen versprechen, dass die Kandidaten die realen Antworten 100% bekommen.

Salesforce Certified Platform App Builder Plat-Admn-202 Prüfungsfragen mit Lösungen (Q130-Q135):

130. Frage

Universal Containers is piloting new features in an existing sandbox and wants to prevent outbound email sends during testing. What should the app builder do to meet the requirement?

- A. Email relay to the configured host enabled.
- B. Email configured for SMTP authentication.
- C. Email deliverability set to system email only.
- **D. Email deliverability set to no access.**

Antwort: D

Begründung:

Setting email deliverability to no access would prevent outbound email sends during testing in a sandbox. This would ensure that no emails are sent to any users or external email addresses from the sandbox. Setting email deliverability to system email only would still allow some emails to be sent, such as password reset emails or new user emails. Configuring SMTP authentication or email relay would not affect email deliverability in a sandbox

131. Frage

An app Builder creates an Account validation rule on the Industry field that will throw an error if the length of the field is longer than 6 characters. Another App Builder creates a workflow rule with a field update that sets the Industry field to Technology whenever the Billing City field is set to San Francisco. What will happen the next time a sales person saves an Account with a Billing City of San Francisco?

- A. The record will save and the Industry field will change to Technology
- B. The record will not save and no error message will be displayed
- C. The record will save but the Industry field will not change to Technology
- **D. The record will not save and the validation rule's error message will be displayed**

Antwort: D

Begründung:

The record will not save and the validation rule's error message will be displayed because the field update will violate the validation rule. The validation rule will prevent the record from being saved if the Industry field is longer than 6 characters, and Technology is 10 characters long.

132. Frage

The marketing team at UVC has a list of 400 leads it wants to upload to Salesforce. The team needs to avoid creating duplicate records. Which two actions should be taken to meet this requirement? Choose 2 answers

- A. Use Data Loader's update function to import lead and match to existing records based on e-mail address.
- B. Enable Duplicate Matching in the Data Management section in Setup and activate the Lead-to_Lead scenario.
- **C. Upload the lead list using the import wizard and select a Matching type to prevent duplicate lead creation.**
- **D. Utilize a Lead Matching Rule and corresponding Duplicate Rule to block newly created duplicate leads.**

Antwort: C,D

Begründung:

The best actions to take to avoid creating duplicate leads when uploading a list of 400 leads are to utilize a Lead Matching Rule and corresponding Duplicate Rule to block newly created duplicate leads, and to upload the lead list using the import wizard and select a Matching type to prevent duplicate lead creation. The Lead Matching Rule defines the criteria for identifying duplicate leads, and the Duplicate Rule defines the actions to take when a duplicate is detected. The import wizard allows users to choose a Matching type based on the Lead Matching Rule and block or allow duplicates. Using Data Loader's update function or enabling Duplicate Matching in the Data Management section will not prevent duplicate lead creation.

133. Frage

An app builder installs an unmanaged package in a full copy sandbox that is an exact match for production, and now they are ready to install it in production. The app builder attempts to install the package in production, and it fails. Why did the package fail to install?

- A. Object items exceeded
- **B. Apex unit test failures**
- C. Internet license types
- D. Package features set compatible

Antwort: B

Begründung:

The correct answer is B. Apex unit test failures.

When installing a package that contains Apex in a production org, Salesforce runs Apex tests as part of the installation/deployment validation. Salesforce documentation states that package installs or upgrades can fail when Apex test requirements are not met. Even though the unmanaged package was tested in a Full Copy sandbox, production installation can still fail if Apex tests fail during production validation.

Why others are incorrect:

A, C, and D are not the best answer because the package already installed successfully in a Full Copy sandbox that matched production. The most certification-relevant reason for production failure is Apex unit test failure.

134. Frage

An app builder just added a lookup field to Account from the existing custom object, Box. Which report type is automatically created?

- A. Boxes with or without Accounts
