## Salesforce Plat-Dev-301 Online Tests - Plat-Dev-301 Latest Real Test

Our Plat-Dev-301 guide question dumps are suitable for all age groups. Even if you have no basic knowledge about the relevant knowledge, you still can pass the Plat-Dev-301 exam. We sincerely encourage you to challenge yourself as long as you have the determination to study new knowledge. Our Plat-Dev-301 test prep will not occupy too much time. You might think that it is impossible to memorize well all knowledge. We can tell you that our Plat-Dev-301 Test Prep concentrate on systematic study,

which means all your study is logic. Why not give us a chance to prove? Our Plat-Dev-301 guide question dumps will never let you down.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q28-Q33):

### NEW QUESTION # 28

A developer gets an error saying 'Maximum Trigger Depth Exceeded.'

What is a possible reason to get this error message?

- A. A trigger is recursively invoked more than 16 times.
- B. A flow trigger was included too many times.
- C. The SOQL governor limits are being hit.
- D. There are numerous DML operations in the trigger logic.

**Answer: A**

Explanation:

The "Maximum Trigger Depth Exceeded" error message is typically caused by a trigger being recursively invoked too many times. Salesforce has a limit on the depth of trigger recursion to prevent infinite loops, which is 16 times.

### NEW QUESTION # 29

A company has a custom object, Order\_c, that has a custom picklist field, Status\_c, with values of "New", "In Progress", or "Fulfilled" and a lookup field, Contact\_c, to Contact.

Which SOQL query will return a unique list of all the Contact records that have no "Fulfilled" Orders?

- A. SELECT Id FROM Contact WHERE Id NOT IN (SELECT Contact\_c FROM Order\_c WHERE Status\_c = 'Fulfilled')
- B. SELECT Contact\_c FROM Order\_c WHERE Id NOT IN (SELECT Id FROM Order\_c Where Status\_c = 'Fulfilled')
- C. SELECT Contact\_c FROM Order\_c WHERE Status\_c <> 'Fulfilled'
- D. SELECT Id FROM Contact WHERE Id NOT IN (SELECT Id FROM Order\_c WHERE Status\_c = 'Fulfilled')

**Answer: A**

Explanation:

The correct SOQL query to return a unique list of Contact records that have no 'Fulfilled' Orders is one that selects Ids from the Contact object where the Contact Id is not in the set of Contact Ids related to 'Fulfilled' Orders. This is done by a subquery that selects the Contact\_c field from the Order\_c records where the Status\_c is 'Fulfilled'.

### NEW QUESTION # 30

When developing a Lightning web component, which setting displays lightninglayout-items in one column on small devices, such as mobile phones, and in two columns on tablet-size and desktop-size screens?

- A. Set size="6" small-device-size="12"
- B. Set size="12" medium-device-size="6"
- C. Set size="6" mobile-device-size="12"
- D. Set size="12" tablet-device-size="6"

**Answer: B**

Explanation:

To display lightning-layout-items in one column on small devices and in two columns on larger devices, you should set the size attribute to "12" for small devices and the medium-device-size attribute to "6". This ensures that on small devices each item takes the full width, and on medium or larger devices, items take up half the width.

### NEW QUESTION # 31

Refer to the exhibit

□ Users of this Visualforce page complain that the page does a full refresh every time the Search button is pressed. What should the developer do to ensure that a partial refresh is made so that only the section identified with opportunityList is re-drawn on the screen?

- A. Enclose the DATA table within the `<apex:actionRegion>` tag.
- B. Ensure the action method search returns null.
- C. Implement the `<apex:actionfunction>` tag with `immediate = true`.
- D. **Implement the `render` attribute on the `<apex:commandButton>` tag.**

**Answer: D**

Explanation:

To ensure that only a part of the Visualforce page is refreshed, developers can use the `reRender` attribute of the `<apex:commandButton>` tag. This attribute specifies the IDs of the components that should be re-rendered as a result of the action method being completed. In this case, setting the `reRender` attribute to the ID of the `<apex:pageBlockSection>` that contains the opportunity list will cause only that section to be updated on the page, resulting in a partial page refresh.

The correct answer is B because it uses the `reRender` attribute correctly to update only the specific part of the page (opportunityList) without a full page refresh.

Salesforce Developer Documentation on Visualforce AJAX Components: Visualforce Developer Guide - CommandButton

### NEW QUESTION # 32

Given the following code:

□ Assuming there were 10 Contacts and five Accounts created today, what is the expected result?

- A. SystemQueryException: Too many DML Statement errors on Contact
- B. SystemLimitException: Too many SOQL Queries on Contact
- C. SystemLimitException: Too many SOQL Queries on Account
- D. **SystemQueryException: List has more than one row for Assignment on Account**

**Answer: D**

Explanation:

The loop contains a SOQL query inside, causing it to run multiple times. This will throw a QueryException because the Account query returns more than one row.

### NEW QUESTION # 33

.....

We have three formats of Plat-Dev-301 study materials for your leaning as convenient as possible. Our Salesforce Developer question torrent can simulate the real operation test environment to help you pass this test. You just need to choose suitable version of our Plat-Dev-301 guide question you want, fill right email then pay by credit card. It only needs several minutes later that you will receive products via email. After your purchase, 7\*24\*365 Day Online Intimate Service of Plat-Dev-301 question torrent is waiting for you. We believe that you don't encounter failures anytime you want to learn our Plat-Dev-301 guide torrent.
