At the same time, CT-UT test guide involve hundreds of professional qualification examinations. No matter which industry you are in, CT-UT practice materials can meet you.

ISTQB Certified Tester Usability Tester Sample Questions (Q20-Q25):

NEW QUESTION # 20
In the last project, the usability tests substantially exceeded the budget of the test plan. Which quality control task could have been used to avoid this?

- A. Check that the usability test plan has been properly reviewed
- B. Check whether the usability test report conforms to the best practices
- C. Check consumed resources regularly and compare with the estimates
- D. Check that findings are communicated to the stakeholders

Answer: C

Explanation:
To prevent usability testing from exceeding budget, active monitoring and control of project resources are critical. The best practice is to regularly check consumed time, costs, and effort against the original estimates, allowing timely adjustments to scope or resources. This is a classic quality control practice aligned with ISO
9001 principles and standard project management methodologies. Option A relates to test preparation, option C concerns reporting and communication, and option D applies after test execution. Only option B deals directly with budget control during the test.

###

NEW QUESTION # 21
You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.
Which of the following is a valid approach for evaluating the usability in this case?

- A. Usability Review
- B. User surveys
- C. Accessibility Evaluation
- D. Usability testing

Answer: A

Explanation:
When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method. Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.
Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.

ISO 9241-110 - Usability Principles

NEW QUESTION # 22
A "usability test participant" ...

- A. ... helps to set up the system used for the usability test.
- B. ... is a representative user who solves typical tasks in a usability test.
- C. ... can be the organizer of a usability test.
- D. ... is a person who observes a usability test.

Answer: B

Explanation:
A usability test participant is a person selected to represent the target user group and asked to perform specific tasks in a usability test. Their actions, reactions, and feedback help identify usability issues and evaluate the system's effectiveness, efficiency, and user satisfaction. This role is strictly observational and does not involve organizing, observing, or setting up the test. Options A, B, and C describe other roles (e.g., technical support, observers, or moderators). Only option D accurately reflects the definition of a usability test participant.
References:
ISO 9241-210:2019 - Human-Centered Design
Usability.gov: Roles in a Usability Test

###

NEW QUESTION # 23
Which of the following statements about usability test scripts is wrong?

- A. It contains answers to the test questions.
- B. It contains post-session interview questions.
- C. It contains pre-session interview questions.
- D. It is a checklist used by the moderator of a usability test.

Answer: A

Explanation:
A usability test script is a structured document used by the moderator to ensure consistency across test sessions. It typically includes pre-session briefing text, pre- and post-session interview questions, and the specific usability tasks to be performed. However, it does not include answers to the test questions, as usability tests focus on observing user behavior and performance-not testing users' knowledge. Providing answers would bias results and invalidate findings. Thus, option D is incorrect and the best choice.

##

NEW QUESTION # 24
As an expert for usability, you're in charge of the usability part of the development of a business application for a large customer. You have worked as a usability expert with the development team for two years and are operating well together; the developers value your feedback and give their bests implementing your suggestions. The product is in an early stage, so there's only a rudimentary prototype available.
Given this information, what is the best approach to verify the usability at the current stage?

- A. Usability test in the lab
- B. Unmoderated usability test
- C. Usability maturity assessment
- D. Usability review

Answer: D

Explanation:
At an early development stage where only a rudimentary prototype exists, a usability review (e.g., expert or heuristic review) is the most effective method. It allows usability specialists to identify potential usability issues without the need for a fully functioning product. Reviews can provide immediate, actionable feedback to guide design improvements before moving into more resource-intensive usability testing. An unmoderated usability test (B) or lab test (D) may be impractical at this stage due to limited interactivity. A usability maturity assessment (C) evaluates organizational processes and is not applicable to evaluating a specific prototype.
