

C-BCBTP-2502 Prüfungsfragen

Prüfungsvorbereitungen, C-BCBTP-2502 Fragen und Antworten, SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite

Übrigens, Sie können die vollständige Version der ZertPruefung C-BCBTP-2502 Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=1Yr4vdMlpyIbMRR1fR8fMcHhPjV5iCC0X>

Viele Kandidaten wissen einfach nicht, wie sie sich auf die Prüfung vorbereiten können und hilflos sind. Aber mit den Schulungsunterlagen zur SAP C-BCBTP-2502 Zertifizierungsprüfung von ZertPruefung ist alles ganz anders geworden. Mit ihr können Sie sich ganz selbstsicher auf Ihre Prüfung vorbereiten. Sie haben kein Risiko, in der Prüfung durchzufallen, mehr zu tragen. Das ist nicht nur seelische Hilfe. Am wichtigsten ist es, dass Sie die Prüfung bestehen und eine glänzende Zukunft haben können.

SAP C-BCBTP-2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
Thema 2	<ul style="list-style-type: none"> Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

Die seit kurzem aktuellsten SAP C-BCBTP-2502 Prüfungsunterlagen, 100% Garantie für Ihen Erfolg in der SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Prüfungen!

Mit der Entwicklung des Zeitalters machen nicht nur die Zivilisation, sondern auch ZertPruefung Fortschritt. Damit Sie so schnell wie

möglich das SAP C-BCBTP-2502 Zertifikat erhalten und erhöhtes Gehalt erhalten können, strengen wir uns ZertPruefung immer an. Nach mehrjährigen Bemühungen beträgt die Erfolgsquote der SAP C-BCBTP-2502 Zertifizierungsprüfung von ZertPruefung bereits 100%. Wählen Sie ZertPruefung, dann wählen Sie Erfolg.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite C-BCBTP-2502 Prüfungsfragen mit Lösungen (Q10-Q15):

10. Frage

Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP Business Network
- B. SAP Concur
- C. SAP AI Core
- D. SAP Business Process Intelligence

Antwort: C,D

Begründung:

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models-from training to deployment- at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

11. Frage

Which SAP BTP service supports real-time financial data analysis for banking and finance industries?

- A. SAP Business Network
- B. SAP Fieldglass
- C. SAP HANA Cloud
- D. SAP Conversational AI

Antwort: C

Begründung:

For the banking and finance industries, the ability to process and analyze data in real-time is not just an advantage-it is a regulatory and operational necessity. SAP HANA Cloud is the foundational BTP service that supports this requirement. Due to its advanced in-memory computing architecture, HANA Cloud allows financial institutions to perform complex risk assessments, liquidity monitoring, and fraud detection on live transactional data.

In the context of the SAP Business Suite for Finance, HANA Cloud eliminates the latency associated with traditional data warehousing. Financial analysts can run "what-if" simulations and "instant closes" directly on the production data set. This real-time capability is essential for managing market volatility and meeting stringent reporting deadlines. Furthermore, HANA Cloud's multi-model processing allows it to handle not just standard relational data, but also spatial and graph data, which are increasingly used in modern financial services for relationship mapping and anti-money laundering (AML) initiatives. By positioning HANA Cloud as the central data engine, SAP BTP provides the high-performance infrastructure needed to power the next generation of digital banking services.

12. Frage

Which SAP BTP service enables businesses to orchestrate and monitor enterprise-wide workflows?

- A. SAP Business Network

- B. SAP Workflow Management
- C. SAP Conversational AI
- D. SAP Ariba

Antwort: B

Begründung:

In the context of the Intelligent Enterprise, business processes often span multiple departments and different software systems. SAP Workflow Management (now largely integrated into the SAP Build Process Automation suite) is the specific BTP service designed to bridge these gaps. It allows organizations to digitize, manage, and operate business processes with high levels of transparency. The service provides a centralized platform to define process flows, set approval limits, and ensure that tasks are routed to the correct stakeholders in a timely manner.

The importance of this service lies in its ability to provide "live process visibility." Unlike traditional siloed workflows, SAP Workflow Management on BTP can pull data from various SAP Business Suite components-like Finance, Procurement, or HR-to create an end-to-end view of a business operation. This orchestration is critical for identifying bottlenecks and improving operational efficiency. While SAP Business Network and SAP Ariba facilitate external collaboration and procurement respectively, they do not provide the underlying technical framework for custom workflow orchestration across the entire enterprise landscape.

By utilizing BTP's workflow capabilities, companies can achieve a higher level of automation and governance, ensuring that business rules are consistently applied across all digital touchpoints, whether the underlying systems are cloud-based or on-premise.

13. Frage

Which SAP BTP component supports microservices-based application development?

- A. SAP Business Network
- B. SAP Concur
- C. SAP Kyma Runtime
- D. SAP SuccessFactors

Antwort: C

Begründung:

As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services-such as a custom loyalty engine or a unique logistics tracker-using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core, allowing for rapid updates and deployments without risking the stability of the primary business processes.

14. Frage

Which of the following are key products of SAP Business Technology Platform (SAP BTP)? (Choose two).

- A. SAP HANA Cloud
- B. SAP SuccessFactors
- C. SAP Integration Suite
- D. SAP Ariba

Antwort: A,C

Begründung:

SAP Business Technology Platform (SAP BTP) is organized into four primary functional pillars: Database and Data Management, Analytics, Application Development and Integration, and Intelligent Technologies.

SAP HANA Cloud serves as the foundation of the Database and Data Management pillar, providing a single, integrated powerhouse for all enterprise data. It offers the speed of in-memory processing combined with the scalability of the cloud, allowing businesses to manage large volumes of data while providing a "single source of truth." On the other hand, SAP Integration Suite is the cornerstone of the Integration pillar. It is an integration platform-as-a-service (iPaaS) that allows organizations to seamlessly
