We have a professional team to collect the first-hand information for the IDP study materials. We can ensure you that what you receive is the latest version for the IDP exam dumps. We are strict with quality and answers of exam dumps. Besides, we offer you free update for one year, and you can get the latest information about IDP Exam Dumps. We also have online and offline chat service stuff to answer all the questions. If you have any questions about IDP exam materials, just contact us, we will give you reply as soon as we can.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 2	<ul style="list-style-type: none">Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.
Topic 3	<ul style="list-style-type: none">Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 4	<ul style="list-style-type: none">Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 5	<ul style="list-style-type: none">Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.

Topic 6	<ul style="list-style-type: none"> • Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 7	<ul style="list-style-type: none"> • User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts.
Topic 8	<ul style="list-style-type: none"> • Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.

Latest CrowdStrike IDP Exam Labs | Test IDP Answers

Our IDP exam braindump is revised and updated according to the change of the syllabus and the latest development situation in the theory and the practice. The IDP exam torrent is compiled elaborately by the experienced professionals and of high quality. The contents of IDP guide questions are easy to master and simplify the important information. It conveys more important information with less answers and questions, thus the learning is easy and efficient. The language is easy to be understood makes any learners have no obstacles to study and pass the IDP Exam.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

An account without a phone number, operating system, or role of CEO would typically be defined as:

- A. Enterprise
- B. Corporate
- C. Programmatic
- D. Human

Answer: C

Explanation:

Falcon Identity Protection classifies accounts based on observed authentication behavior and associated identity attributes, not solely on naming conventions. According to the CCIS curriculum, programmatic accounts (such as service accounts or application accounts) typically lack human-centric attributes like a phone number, assigned operating system, job title, or executive role (for example, CEO).

Human accounts generally have enriched identity context sourced from directory services and identity providers, including user profile details, interactive login behavior, and endpoint associations. In contrast, programmatic accounts authenticate non-interactively, often on predictable schedules, and do not require personal attributes to function.

Falcon analyzes authentication traffic to automatically identify these characteristics and classify the account accordingly. An account missing human identity signals—such as a phone number or endpoint ownership—strongly aligns with programmatic behavior.

Because the absence of personal attributes and interactive context is a defining indicator of a programmatic account, Option C is the correct and verified answer.

NEW QUESTION # 40

By using compromised credentials, threat actors are able to bypass the Execution phase of the MITRE ATT&CK framework and move directly into:

- A. Weaponization
- B. Initial Access
- C. Discovery
- D. Lateral Movement

Answer: C

Explanation:

The CCIS curriculum highlights a critical identity-security concept: when attackers use compromised credentials, they often bypass traditional malware-based attack phases, including the Execution phase of the MITRE ATT&CK framework. Because no malicious code needs to be executed, attackers can immediately begin interacting with the environment as a legitimate user.

As a result, threat actors move directly into the Discovery phase. During Discovery, attackers enumerate users, groups, privileges, systems, domain relationships, and trust paths to understand the environment and plan further actions. This behavior is commonly observed in identity-based attacks and living-off-the-land techniques.

Falcon Identity Protection is specifically designed to detect this behavior by monitoring authentication traffic, privilege usage, and anomalous identity activity—areas where traditional EDR tools may have limited visibility.

The other options are incorrect:

- * Initial Access has already occurred via credential compromise.
- * Weaponization and Execution are not required.
- * Lateral Movement typically follows Discovery.

Because compromised credentials allow attackers to jump straight into Discovery, Option C is the correct and verified answer.

NEW QUESTION # 41

Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. Azure NPS
- B. SAML
- C. Okta SSO
- D. ADFS

Answer: C

Explanation:

Falcon Identity Protection integrates with Identity-as-a-Service (IDaaS) providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum, Okta SSO is a supported IDaaS connector that enables Falcon to ingest cloud authentication events while also applying Single Sign-On (SSO) policies.

Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.

The other options are incorrect:

- * ADFS is an on-premises federation service, not a cloud IDaaS.
- * Azure NPS is used for RADIUS-based MFA, not SSO ingestion.
- * SAML is a protocol, not an IDaaS connector.

Because Okta SSO provides both cloud activity ingestion and SSO enforcement, Option C is the correct and verified answer.

NEW QUESTION # 42

For false positives, the Detection details can be set to new "Actions" using:

- A. remediations
- B. recommendations
- C. exits
- D. exceptions

Answer: D

Explanation:

When an identity-based detection is determined to be a false positive, Falcon Identity Protection allows administrators to take corrective action using exceptions. According to the CCIS curriculum, exceptions are the mechanism by which detections can be suppressed for specific entities or conditions without disabling the detection entirely.

Exceptions are configured from the Detection details view and are intended to handle known, acceptable behavior that would otherwise continue to trigger detections. This allows security teams to reduce noise while maintaining visibility into true threats.

Exceptions are especially valuable in environments with complex authentication patterns or legacy configurations.

The other options are incorrect:

- * Exits are not a detection control mechanism.

* Remediations refer to corrective actions, not suppression logic.

* Recommendations provide guidance but do not change detection behavior.

By using exceptions, Falcon ensures that false positives are handled in a controlled and auditable way, aligning with best practices outlined in the CCIS material. Therefore, Option C is the correct answer.

NEW QUESTION # 43

Describe the difference between a Human account and a Programmatic account.

- A. A human account is often used interactively
- B. A human account is an Administrator
- C. A programmatic account is never authorized for multi-factor authentication
- D. A programmatic account is only used interactively

Answer: A

Explanation:

Falcon Identity Protection differentiates human accounts and programmatic accounts based on authentication behavior, not naming conventions or assigned roles. According to the CCIS curriculum, human accounts are often used interactively, meaning they authenticate through direct user actions such as workstation logins, VPN access, or application access.

Programmatic accounts (such as service accounts) typically authenticate non-interactively, often on a predictable schedule or in response to automated processes. Falcon analyzes authentication frequency, protocol usage, timing, and access patterns to classify account types automatically.

The incorrect options reflect common misconceptions:

* Human accounts are not always administrators.

* Programmatic accounts can support MFA in some architectures.

* Programmatic accounts are not used interactively.

Because interactive authentication behavior is the defining characteristic of human accounts, Option D is the correct and verified answer.
