NCP-MCA Latest Study Materials & NCP-MCA PDF Cram Exam

With the development of information and communications technology, we are now living in a globalized world. NCP-MCA information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. In current situation, enterprises and institutions require their candidates not only to have great education background, but also acquired professional NCP-MCA Certification. Considering that, it is no doubt that an appropriate certification would help candidates achieve higher salaries and get promotion.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q59-Q64):

NEW QUESTION # 59

When creating a blueprint, which Pre-create and Post-delete tasks are valid?

- **A. Execute, Set variable, HTTP, Delay**
- B. Create, Start, Stop, Delete
- C. Create, Start, Stop, Soft Delete
- D. Execute, Set variable, API, Delay

Answer: A

Explanation:

Pre-create and Post-delete tasks are actions that can be performed before creating or after deleting a blueprint deployment. They can be used to integrate with external systems, set variables, or add delays. The valid tasks are Execute, Set variable, HTTP, and Delay. Create, Start, Stop, and Delete are not valid tasks, as they are part of the deployment lifecycle, not the pre-create or post-delete actions. Reference: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 10; Nutanix Multicloud Automation Administration (NMCAA) Course, Module 5: Blueprints.

NEW QUESTION # 60

An administrator needs to create a Playbook to be notified when VMs are deleted.
Which X-Play Trigger would satisfy this task?

- A. Alert
- **B. Event**
- C. Time
- D. Audit

Answer: B

Explanation:

An X-Play Trigger is a condition that initiates a Playbook. There are four types of X-Play Triggers: Alert, Audit, Event, and Time1. An Alert Trigger is based on a Prism alert, such as a VM power state change or a disk failure. An Audit Trigger is based on a Prism audit entry, such as a user login or a cluster operation. An Event Trigger is based on a Prism event, such as a VM creation or deletion. A Time Trigger is based on a schedule, such as daily, weekly, or monthly2. In this scenario, the administrator needs to create a Playbook to be notified when VMs are deleted. Therefore, the appropriate X-Play Trigger would be an Event Trigger, since VM deletion is a Prism event. NEW QUESTION # 61

An administrator needs to notify the on-call pager after hours using their PagerDuty incident management platform.
How should the administrator integrate notifications via PagerDuty in a Playbook using the least number of configurations possible?

- A. Create an action to notify PagerDuty via IP address.
- **B. Send Alert to Webhook which will use APIs to send notification to PagerDuty.**
- C. Send Alert to Nutanix v3 API which will use APIs to send notification to PagerDuty.
- D. Create an action to send an alert to PagerDuty'.

Answer: B

Explanation:

The Send Alert to Webhook action allows the administrator to send an HTTP request to a specified URL, which can be used to trigger a PagerDuty incident via its REST API1. This action requires the least number of configurations compared to the other options, as it only needs the webhook URL, the HTTP method, and the payload. The other options would require additional steps, such as creating a custom action, configuring the IP address, or using the Nutanix v3 API, which is not designed for integrating with third-party services.

NEW QUESTION # 62

A customer is trying to deploy an application with Calm and receives this error for a Linux VM:

```
script execution has failed with error dial tcp: lookup
dummy on <dns_ip_in_pc>:53: server misbehaving
```

What is the cause of this error within the blueprint?

- A. Connection section has no network adapters selected for the Address box in Connection section.
- B. Connection section has a network adapter selected for the Address box in Connection section.
- C. Connection Type has no protocol selected.
- D. Connection Type has a protocol selected.

Answer: A

Explanation:

In the context of deploying an application with Calm, if a customer receives an error for a Linux VM, it could be due to the absence of network adapters selected for the Address box in the Connection section within the blueprint. This means that there is no specified network connection for the VM, leading to a failure in script execution.

* Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide: This is the official exam blueprint guide that covers the objectives, topics, and skills required for the certification. It also provides some sample questions and answers. The question you asked is similar to the one in section 3.1.1.

* Nutanix Multicloud Automation Administration (NMCAA): This is a training course that teaches you the skills needed to install, configure, operate, and manage Nutanix X-Play and Nutanix Calm. It

* includes topics such as blueprint creation, connection configuration, and script execution.

* Nutanix Calm User Guide: This is a user guide that explains how to use Nutanix Calm to automate the deployment and management of applications across different environments. It includes topics such as connection settings, blueprint validation, and error handling.

NEW QUESTION # 63

Which Prism Central setting must first be configured in order to add users to a Project?

- A. Local User Role Mapping
- B. HTTP Proxy
- C. Pulse
- D. Authentication Directory

Answer: B
