問題 #77

You have a container in an Azure Cosmos DB Core (SQL) API account.

You need to use the Azure Cosmos DB SDK to replace a document by using optimistic concurrency.

What should you include in the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案：

解題說明：

Explanation:

Box 1: ConsistencyLevel

The `ItemRequestOptions` Class `ConsistencyLevel` property gets or sets the consistency level required for the request in the Azure Cosmos DB service.

Azure Cosmos DB offers 5 different consistency levels. Strong, Bounded Staleness, Session, Consistent Prefix and Eventual - in order of strongest to weakest consistency.

Box 2: `_etag`

The `ItemRequestOptions` class helped us implement optimistic concurrency by specifying that we wanted the SDK to use the `If-Match` header to allow the server to decide whether a resource should be updated. The `If-Match` value is the `ETag` value to be checked against. If the `ETag` value matches the server `ETag` value, the resource is updated.
