From your first contact with our GitHub-Advanced-Security practice guide, you can enjoy our excellent service. Before you purchase GitHub-Advanced-Security exam questions, you can consult our online customer service. Even if you choose to use our trial version of our GitHub-Advanced-Security Study Materials first, we will not give you any differential treatment. As long as you have questions on the GitHub-Advanced-Security learning guide, we will give you the professional suggestions.

GitHub GitHub-Advanced-Security Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configure and use dependency management: This section of the exam measures skills of a DevSecOps Engineer and covers configuring dependency management workflows to identify and remediate vulnerable or outdated packages. Candidates will show how to enable Dependabot for version updates, review dependency alerts, and integrate these tools into automated CI• CD pipelines to maintain secure software supply chains.
Topic 2	<ul style="list-style-type: none">• Configure and use code scanning: This section of the exam measures skills of a DevSecOps Engineer and covers enabling and customizing GitHub code scanning with built-in or marketplace rulesets. Examinees must know how to interpret scan results, triage findings, and configure exclusion or override settings to reduce noise and focus on high-priority vulnerabilities.
Topic 3	<ul style="list-style-type: none">• Configure and use secret scanning: This section of the exam measures skills of a DevSecOps Engineer and covers setting up and managing secret scanning in organizations and repositories. Test-takers must demonstrate how to enable secret scanning, interpret the alerts generated when sensitive data is exposed, and implement policies to prevent and remediate credential leaks.

Pass Guaranteed Quiz 2026 Perfect GitHub GitHub-Advanced-Security Reliable Exam Sims

Generally speaking, a satisfactory practice material should include the following traits. High quality and accuracy rate with reliable services from beginning to end. As the most professional group to compile the content according to the newest information, our GitHub-Advanced-Security practice materials contain them all, and in order to generate a concrete transaction between us we take pleasure in making you a detailed introduction of our GitHub-Advanced-Security practice materials. We would like to take this opportunity and offer you a best GitHub-Advanced-Security practice material as our strongest items as follows.

GitHub Advanced Security GHAS Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

When configuring code scanning with CodeQL, what are your options for specifying additional queries?
(Each answer presents part of the solution. Choose two.)

- A. Scope
- B. github/codeql
- C. Packs
- D. Queries

Answer: C,D

Explanation:

You can customize CodeQL scanning by including additional query packs or by specifying individual queries:

* Packs: These are reusable collections of CodeQL queries bundled into a single package.

* Queries: You can point to specific files or directories containing .ql queries to include in the analysis.

github/codeql refers to a pack by name but is not a method or field. Scope is not a valid field used for configuration in this context.

NEW QUESTION # 53

Who can fix a code scanning alert on a private repository?

- A. Users who have the Triage role within the repository
- B. Users who have Write access to the repository
- C. Users who have Read permissions within the repository
- D. Users who have the security manager role within the repository

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

In private repositories, users with write access can fix code scanning alerts. They can do this by committing changes that address the issues identified by the code scanning tools. This level of access ensures that only trusted contributors can modify the code to resolve potential security vulnerabilities.

GitHub Docs

Users with read or triage roles do not have the necessary permissions to make code changes, and the security manager role is primarily focused on managing security settings rather than directly modifying code.

NEW QUESTION # 54

When using CodeQL, what extension stores query suite definitions?

- A. .qll
- B. .qls
- C. .yaml
- D. .ql

Answer: B

Explanation:

Query suite definitions in CodeQL are stored using the .qls file extension. A query suite defines a collection of queries to be run during an analysis and allows for grouping them based on categories like language, security relevance, or custom filters.

In contrast:

- * .ql files are individual queries.
- * .qll files are libraries used by .ql queries.
- * .yaml is used for workflows, not query suites.

NEW QUESTION # 55

What filter or sort settings can be used to prioritize the secret scanning alerts that present the most risk?

- A. Sort to display the newest first
- **B. Filter to display active secrets**
- C. Select only the custom patterns
- D. Sort to display the oldest first

Answer: B

Explanation:

The best way to prioritize secret scanning alerts is to filter by active secrets- these are secrets GitHub has confirmed are still valid and could be exploited. This allows security teams to focus on high-risk exposures that require immediate attention.

Sorting by time or filtering by custom patterns won't help with risk prioritization directly.

NEW QUESTION # 56

Which patterns are secret scanning validity checks available to?

- A. High entropy strings
- B. Push protection patterns
- **C. Partner patterns**
- D. Custom patterns

Answer: C

Explanation:

Validity checks- where GitHub verifies if a secret is still active - are available for partner patterns only.

These are secrets issued by GitHub's trusted partners (like AWS, Slack, etc.) and have APIs for GitHub to validate token activity status.

Custom patterns and high entropy patterns do not support automated validity checks.

NEW QUESTION # 57

.....

The prominent benefits of GitHub GitHub-Advanced-Security certification exam are more career opportunities, updated skills and knowledge, recognition of expertise, and instant rise in salary and promotion in new job roles. To do this you just need to pass the GitHub GitHub-Advanced-Security Exam. However, to get success in the GitHub-Advanced-Security exam is not an easy task, it is a challenging GitHub-Advanced-Security exam.
