

Prominent Features of ExamsTorrent CrowdStrike IDP Exam Practice Test Questions

P.S. Free 2026 CrowdStrike IDP dumps are available on Google Drive shared by ExamsTorrent: <https://drive.google.com/open?id=1vfZFBA71krTFfYu2vdmVHs4mTtyUOPZg>

Our CrowdStrike Certified Identity Specialist(CCIS) Exam study questions have a high quality, that mainly reflected in the passing rate. More than 99% students who use our IDP exam material passed the exam and successfully obtained the relating certificate. This undoubtedly means that if you purchased IDP exam guide and followed the information we provided you, you will have a 99% chance of successfully passing the exam. So our IDP study materials are a good choice for you. In order to gain your trust, we will provide you with a full refund commitment. If you failed to pass the exam after you purchase IDP Exam Material, whatever the reason, you just need to submit your transcript to us and we will give you a full refund. We dare to make assurances because we have absolute confidence in the quality of CrowdStrike Certified Identity Specialist(CCIS) Exam study questions. We also hope you can believe that IDP exam guide is definitely the most powerful weapon to help you pass the exam.

CrowdStrike IDP Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> • User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts. |
| Topic 2 | <ul style="list-style-type: none"> • Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation. |
| Topic 3 | <ul style="list-style-type: none"> • Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops. |

| | |
|---------|---|
| Topic 4 | <ul style="list-style-type: none"> • Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation. |
| Topic 5 | <ul style="list-style-type: none"> • Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles. |
| Topic 6 | <ul style="list-style-type: none"> • Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity • likelihood • consequence factors, risk prioritization, score reduction, and configuring security goals and scopes. |
| Topic 7 | <ul style="list-style-type: none"> • Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling. |
| Topic 8 | <ul style="list-style-type: none"> • Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities. |

Valid Braindumps IDP Book | IDP Reliable Test Sample

Professional IDP exam using ExamsTorrent free exam discussions. CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam discussions provide a supportive environment where you can discuss difficult concepts and ask questions of your peers. In a free exam discussions, you'll have the opportunity to learn from a certified IDP instructor who has extensive experience in IDP studies. The instructor can also provide you with tips and best practices for taking the exam.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

When creating an API client, which scope withWritepermissions must be enabled prior to using Identity Protection API?

- **A. Identity Protection GraphQL**
- B. Identity Protection Assessment
- C. There is no need for Write permissions in order to use IDP API
- D. Identity Protection Health

Answer: A

Explanation:

To interact with Falcon Identity Protection using GraphQL, the API client must be created with the appropriate permission scopes. According to the CCIS curriculum, theIdentity Protection GraphQLscope withWrite permissionsmust be enabled prior to using the Identity Protection API.

This scope allows the API client to execute GraphQL queries and mutations related to identity detections, incidents, users, and risk data. Even when performing read-only operations, CrowdStrike requires the GraphQL Write scope to authorize GraphQL query execution within the Falcon platform.

The other options are incorrect because:

* Identity Protection Assessment and Health are read-only data scopes.

* The statement that Write permissions are not required is explicitly false per CCIS documentation.

Because GraphQL access requires theIdentity Protection GraphQL (Write)scope,Option Dis the correct and verified answer.

NEW QUESTION # 21

Which of the following isNOTan available Goal within the Domain Security Overview?

- A. Privileged Users Management
- B. Pen Testing
- C. AD Hygiene
- **D. Business Privileged Users Management**

Answer: D

Explanation:

The Domain Security Overview in Falcon Identity Protection uses Goals to frame identity risks into focused security assessment perspectives. These goals allow organizations to evaluate identity posture based on specific security priorities such as directory hygiene, privilege exposure, or overall attack surface reduction.

According to the CCIS curriculum, the available Goals include Privileged Users Management, AD Hygiene, Pen Testing, and Reduce Attack Surface. These goals are predefined by CrowdStrike and determine how risks are grouped, weighted, and presented in reports.

Business Privileged Users Management is not an available Goal within the Domain Security Overview.

While Falcon Identity Protection does support the concept of business privileges and evaluates their impact on users and entities, this concept is handled through risk analysis and configuration—not as a selectable Domain Security Goal.

The CCIS documentation clearly distinguishes between Goals (which control reporting and assessment views) and business privilege modeling (which influences risk scoring). Therefore, Option B is the correct and verified answer.

NEW QUESTION # 22

Which of the following demonstrates a detection is enabled?

- A. The detection has a Disabled tag next to it
- **B. The toggle next to the Detection Enabled is marked in green**
- C. The toggle next to the Detection Enabled is marked in gray
- D. The detection has an Enabled tag next to it

Answer: B

Explanation:

In Falcon Identity Protection, detection status is visually indicated using a toggle control within the detection configuration interface. According to the CCIS documentation, when a detection is enabled, the toggle next to Detection Enabled is displayed in green.

A green toggle indicates that the detection logic is active and that Falcon will generate detections when the defined conditions are met. When the toggle is gray, the detection is disabled and will not generate alerts or contribute to incident formation.

Falcon does not rely on textual "Enabled" or "Disabled" tags to indicate detection status. Instead, the toggle color provides a clear, immediate visual indicator to administrators.

Because a green toggle explicitly represents an enabled detection, Option B is the correct and verified answer.

NEW QUESTION # 23

Any countries or regions included in the _ will trigger a geolocation detection.

- A. Allowlist
- B. Exclusion
- C. Dictionary
- **D. Blocklist**

Answer: D

Explanation:

Falcon Identity Protection supports geolocation-based detections to identify potentially risky authentication activity originating from unexpected or prohibited locations. According to the CCIS curriculum, any countries or regions added to the Blocklist will automatically trigger a geolocation-based detection when authentication traffic is observed from those locations.

The Blocklist is designed to explicitly define disallowed geographic regions. When an authentication attempt originates from a blocklisted country or region, Falcon treats the activity as suspicious and generates a detection or contributes to increased identity risk.

By contrast:

* An Allowlist defines approved locations and suppresses detections.

* A Dictionary is used for password-related analysis.

* An Exclusion suppresses detections rather than generating them.
Because geolocation detections are triggered by blocklisted locations, Option A is the correct answer.

NEW QUESTION # 24

How does CrowdStrike Falcon Identity Protection help customers identify different types of accounts in their domain?

- A. Conducts regular vulnerability assessments on programmatic accounts
- B. Implements advanced encryption algorithms for account metadata
- C. Assigns a human authorizer to each programmatic account for approval
- **D. Analyzes authentication traffic and automatically classifies programmatic and human accounts**

Answer: D

Explanation:

Falcon Identity Protection automatically differentiates human and programmatic accounts by analyzing authentication traffic patterns. According to the CCIS curriculum, the platform uses behavioral analytics to observe how accounts authenticate, including frequency, protocol usage, timing, and access patterns.

Human users typically authenticate interactively and exhibit variable behavior, while programmatic or service accounts authenticate predictably and non-interactively. Falcon leverages these differences to automatically classify account types without requiring manual tagging or administrative input.

This classification is critical for accurate risk scoring, privilege analysis, and detection logic. Programmatic accounts often carry elevated privileges and long-lived credentials, making them attractive targets for attackers. Automatically identifying them allows Falcon to apply appropriate risk models and detections.

Because Falcon uses authentication traffic analysis to classify account types, Option C is the correct and verified answer.

NEW QUESTION # 25

.....

We hope that you can use your time as much as possible for learning on the IDP practice questions. So we have considered every detail of the IDP study guide to remove all unnecessary programs. If you try to download our IDP study materials, you will find that they are so efficient! And even you free download the demos on the website, you can feel the convenience and efficiency. It is simple and easy to study with our IDP learning braindumps.
