Exam SCP-NPM Braindumps & Reliable SCP-NPM Exam Guide

Our company is a professional certificate study materials provider. We have occupied in this field for years, we are in the leading position of providing exam materials. SCP-NPM training materials of us is high-quality and accurate, for we have a profession team to verify and update the SCP-NPM answers and questions. We have received many good feedbacks from our customers for helping pass the exam successfully. Furthermore, we provide you free update for one year after purchasing SCP-NPM exam dumps from us.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

You have two groups of users - one in Sydney and one in Perth. How do you limit the users within the Orion Platform so they only have access to the devices in their location?

- A. Configure the Orion Web Console settings to show only devices in the user's geographical location
- **B. Group devices into geographical Orion groups and use single group Account limitations to limit user access**
- C. Configure Network Atlas to show only devices in their geographical location
- D. Use the Orion Service Manager to limit user access to nodes only in their location

Answer: B

Explanation:

According to the SolarWinds NPM Administrator Guide, you can use Orion groups to organize your network objects based on any criteria, such as location, device type, department, etc. You can then apply account limitations based on Orion groups to restrict user access to only the network objects that belong to a specific group. For example, you can create two Orion groups, one for Sydney and one for Perth, and assign the devices in each location to the corresponding group. Then, you can use the single group Account limitation to limit the users in Sydney to only view the Sydney group, and the users in Perth to only view the Perth group. References: SolarWinds NPM Administrator Guide, page 163-165; Limit users to specific network areas in the SolarWinds Platform

NEW QUESTION # 44

A custom poller has polled some results from nodes. Which of the following is a possible reason for NOT being able to show the polled results as charts on the Orion Web Console?

- A. You did not set the poller to collect historical statistics
- B. The poller is not enabled and assigned to the devices
- C. You must use Device Studio to build the poller
- **D. Charts are only supported by out-of-the-box pollers**

Answer: D

NEW QUESTION # 45

You use NPM to monitor a set of physical servers. The server team decides to virtualize these servers using VMware. Which part of your virtual infrastructure will NPM no longer be able to monitor?

- **A. VM sprawl monitoring**
- B. Virtualization host hardware health
- C. Virtualization host and VM performance metrics
- D. Virtualization environment tree

Answer: A

Explanation:

NEW QUESTION # 46

How many agents does NPM require for Quality of Experience, NetPath, and system monitoring on the same Windows server?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

NEW QUESTION # 47

You can import device-specific MIBs into the SolarWinds MIB Database, but you cannot import UnDP pollers based on OIDs from device-specific MIBs.

- A. True
- **B. False**

Answer: B

Explanation:

You can import device-specific MIBs into the SolarWinds MIB Database, and you can also import UnDP pollers based on OIDs from device-specific MIBs. UnDP stands for Universal Device Poller, which is a tool that allows you to monitor custom statistics based on OIDs with NPM. You can create UnDP pollers by selecting OIDs from the MIB Browser, or by importing them from a file that contains OIDs and poller names.

You can then assign UnDP pollers to devices monitored by NPM and view the results on the web console.
