なぜ我々社は試験に合格しないなら、全額での返金を承諾するのは大勢の客様が弊社のUiPath UiPath-ABAv1問題集を使用して試験に合格するのは我々に自信を与えるからです。UiPath UiPath-ABAv1試験はIT業界での人にとって、とても重要な能力証明である一方で、大変難しいことです。それで、弊社の専門家たちは多くの時間と精力を尽くし、UiPath UiPath-ABAv1試験資料を研究開発されます。

UiPath UiPath-ABAv1 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Implementation Methodology: Understanding project implementation stages, interpreting PDDs and SDDs, and conducting peer reviews are discussed here.
トピック 2	<ul style="list-style-type: none">Business Knowledge: This topic focuses on understanding business process automation (BPA) and its value proposition, as well as exploring key concepts related to business processes.
トピック 3	<ul style="list-style-type: none">Integration Service: This topic explains Integration Service, use of integration service connectors, triggers, and the Integration Service Connector Builder.
トピック 4	<ul style="list-style-type: none">Control Flow: Control Flow activities, workflow types, and Flowchart layouts are discussed here, along with the usage of IF, Flow Decision, Switch activities, While, Do While, and For Each.
トピック 5	<ul style="list-style-type: none">UI Automation: UI Automation principles, including modern and classic design experiences, are discussed alongside utilizing modern recorder and inputoutput activities.
トピック 6	<ul style="list-style-type: none">Exception Handling: This topic covers using Try Catch, Throw, Rethrow, and Retry Scope activities.
トピック 7	<ul style="list-style-type: none">Studio Interface: Here, the topic covers installing Studio Community Edition, connecting to Orchestrator, and navigating the Studio interface. It also includes explanations of different Studio profiles, management of packages, use of activity project settings, and the use of options in the Studio Backstage view.
トピック 8	<ul style="list-style-type: none">Version Control Integration: It focuses on utilizing Git integration in Studio to add a project, clone a repository is explained, including common Git operations.
トピック 9	<ul style="list-style-type: none">Data Manipulation: String manipulation, array operations, list initialization, dictionary usage, and DataTable operations are discussed in this topic.

トピック 10	<ul style="list-style-type: none"> Excel Automation: It explains Excel Automation principles and modern Excel integration including reading, writing, and manipulating Excel files. Additionally, the topic focuses on the usage of the Excel Workbook activities.
トピック 11	<ul style="list-style-type: none"> Debugging: Debugging modes, actions, breakpoints, and debugging panels are explained in this topic, along with using Profile Execution features to improve project execution performance.
トピック 12	<ul style="list-style-type: none"> Variables and Arguments: This topic explores data types and how they're utilized, along with creating, managing, and using variables and arguments. It also addresses the differences between variables, arguments, global constants, and global variables.
トピック 13	<ul style="list-style-type: none"> Logging: This topic addresses interpreting robot execution logs and implementing logging best practices during development for effective debugging and analysis.

なぜ我々社は試験に合格しないなら、全額での返金を承諾するのは大勢の客様が弊社のUiPath UiPath-ABAv1問題集を使用して試験に合格するのは我々に自信を与えるからです。UiPath UiPath-ABAv1試験はIT業界での人にとって、とても重要な能力証明である一方で、大変難しいことです。それで、弊社の専門家たちは多くの時間と精力を尽くし、UiPath UiPath-ABAv1試験資料を研究開発されます。

UiPath Certified Professional Automation Business Analyst Professional v1.0 認定 UiPath-ABAv1 試験問題 (Q35-Q40):

質問 # 35

Which of the following factors most influences the complexity of a process proposed for automation?

- A. The number of people involved
- B. The level of automation
- C. The speed of the process
- **D. The number of steps involved**

正解: D

解説:

The complexity of a process proposed for automation is most influenced by the number of steps involved. A higher number of steps typically indicates a more complex process, as it may involve multiple decision points, variations, and interactions with different systems or applications. Complexity can be defined by factors such as the number of applications/systems, the frequency of human intervention, or the number of steps required to execute the task¹. Processes with fewer steps are generally easier to automate because they are simpler and have fewer variables to manage during the automation.

References: The explanation is based on the UiPath blog post discussing factors that influence the complexity of processes for automation¹.

質問 # 36

What is the role of the UiPath Automation Hub?

- **A. Manages and tracks the progress of automation projects.**
- B. Estimates the amount of data needed during the automation lifecycle.
- C. Manages the robots and resources used in the automation project.
- D. Estimates the duration of the development of the automation project.

正解: A

解説:

UiPath Automation Hub is a collaborative platform where automation ideas are submitted, assessed, prioritized, and tracked through their lifecycle. It manages the entire automation pipeline from idea intake to implementation.

UiPath's official description:

"Automation Hub centralizes the automation pipeline, managing the progress of automation opportunities, providing analytics, and fostering collaboration across teams." It's used by business users, CoE members, developers, and others to ensure transparency and governance in automation programs.

質問 # 37

Which of the following is a valid reason for defining a system exception?

- A. Input data does not pass validation criteria
- B. Application login failure because of incorrect credentials
- C. Internet connection failure in case of a web application usage
- D. Email attachment not available

正解: C

解説:

A valid reason for defining a system exception includes scenarios like an Internet connection failure in the case of a web application usage. System exceptions refer to errors that are caused by external factors unrelated to the business logic, such as technical failures or connectivity issues, which disrupt the normal functioning of an application. References: UiPath Documentation on Exception Handling at <https://docs.uipath.com/>.

質問 # 38

What is an unattended automation process?

- A. Unattended Automations are automations that are intended for more complex and highly repetitive tasks.
- B. Unattended Automations are automations that are intended to run on the same machine as the human uses.
- C. Unattended Automations are automations that run under human supervision.
- D. Unattended Automations are automations that are best suited for use with smaller, more fragmented tasks.

正解: A

解説:

Understanding Unattended Automation:

Unattended automations are designed to execute without human intervention, making them ideal for handling complex, highly repetitive, and time-consuming tasks.

Why Option A is Correct:

These automations typically run on dedicated machines and handle back-office tasks.

Why Other Options Are Incorrect:

Option B: Smaller tasks are more suitable for attended automations.

Option C/D: Unattended automations do not depend on human presence or interaction.

質問 # 39

What is the recommended way to extract data from an Invoice?

- A. Using the RegEx extractor
- B. Using the ML Extractor with the Invoices out-of-the-box ML model
- C. Using FormsAI
- D. Using the Form Extractor

正解: B

解説:

The recommended way to extract data from an Invoice is using the ML Extractor with the Invoices out-of-the-box ML model. This approach utilizes machine learning to automatically identify and extract relevant data fields from invoices, which are typically structured but vary in format, enhancing accuracy and efficiency in data extraction.
