Are you still feeling uncomfortable about giving up a lot of time to entertain, work or accompany your family and friends in preparation for the exam? Using FCP\_FMG\_AD-7.6 quiz torrent, you can spend less time and effort reviewing and preparing, which will help you save a lot of time and energy. Whether you are a worker or student, you will save much time to do something whatever you want. It only needs 5-10 minutes after you pay for our FCP\_FMG\_AD-7.6 learn torrent that you can learn it to prepare for your exam. Actually, if you can guarantee that your effective learning time with FCP\_FMG\_AD-7.6 test preps are up to 20-30 hours, you can pass the exam.

## Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Refer to the exhibit. Which two statements about the configuration shown in the exhibit are true?

(Choose two.)

- A. The FortiManager is in workflow mode.
- B. The administrator created a snapshot of the Remote-FortiGate policy package.
- C. The FortiManager ADOM workspace mode is set to normal.
- D. An administrator can lock the Local-FortiGate\_root policy package.

**Answer: C,D**

Explanation:

The lock icon next to the Remote-FortiGate policy package indicates it is currently locked by an administrator. This confirms that policy packages like Local-FortiGate\_root can also be locked, meaning an administrator can lock them.

The presence of individual locks and the lack of workflow-specific icons or steps indicate that FortiManager is operating in Normal Mode, not Workflow Mode.

### NEW QUESTION # 53

An administrator must create a policy and install it on a FortiGate device within an ADOM in backup mode.

How can the administrator perform this task?

- A. Use a FortiManager script to apply the configuration changes.
- B. Use the Install Wizard located on the device manager.
- C. Enable workflow mode to allow policy creation and approval.
- D. Make sure the ADOM and FortiGate firmware versions match and use the ADOM policy package.

**Answer: A**

Explanation:

To make configuration changes from FortiManager to managed devices while in backup mode, you must use the script feature..

### NEW QUESTION # 54

Refer to the exhibit.

Create New Script
0/225

Type: CLI Script

Run script on: Device Database

Validate on change:

Validation device platform: FortiGate-VM64

Script details: Search...

```

1 config router prefix-list
2 edit public
3 config rule
4 edit 1
5 set prefix 0.0.0.0/0
6 set action permit
7 next
8 edit 2
9 set prefix 8.8.8.8/32
10 set action deny
11 end

```

Advanced Device Filters >

Which two results occur if you run the script using the Device Database option? (Choose two.)

- A. The successful execution of a script on the Device Database creates a new revision history.
- B. The device Config Status is tagged as Modified.
- C. The administrator must install these changes on a managed device using the Install Wizard.
- D. The script history shows the successful installation of the script on the remote FortiGate.

**Answer: B,C**

Explanation:

Running a script on the Device Database marks the configuration as modified but does not immediately apply changes to the device. The administrator must use the Install Wizard to push and install these changes from the Device Database onto the managed device.

#### NEW QUESTION # 55

Refer to the exhibit. What are two results from the configuration shown in the exhibit? (Choose two.)

```

FortiManager # config system global
(global)# set workspace-mode normal
(global)# end
FortiManager #

```

- A. Ungraceful closed sessions will keep the ADOM in a locked state until the administrator session times out.
- B. The administrator must have access to the ADOM to approve changes.
- C. The administrator can lock policy blocks and FortiManager global ADOM.
- D. The same administrator can lock more than one ADOM at the same time.

**Answer: A,D**

Explanation:

If an administrator locks an ADOM (checks it out) and then closes their session ungracefully (e.g., browser crash, network disconnect) without explicitly checking the configuration back in, the ADOM remains in a locked state. FortiManager relies on the

configured session timeout to automatically release the lock. This prevents other administrators from editing the configuration until the lock expires.

The lock is applied on a per-ADOM basis. A single administrator can log into FortiManager and check out (lock) multiple different ADOMs simultaneously, provided those ADOMs are not currently locked by another administrator.

#### NEW QUESTION # 56

Push updates are failing on a FortiGate device located behind a network address translation (NAT) device?

Which two settings should the administrator check to correct this problem? (Choose two.)

- **A. Make sure the NAT device IP address and the correct ports are configured on FortiManager.**
- B. Make sure FortiGuard updates and web service are enabled on the FortiGuard service interface.
- **C. Make sure the virtual IP address and the correct ports are configured on the NAT device.**
- D. Make sure the Bind to IP address option on the FortiGuard service interface is set to the virtual IP address from the NAT device.

**Answer: A,C**

Explanation:

FortiManager must have the NAT device's IP address and correct ports configured to communicate properly with the FortiGate behind NAT.

The NAT device must have the correct virtual IP address and ports configured to allow push updates to reach the FortiGate device.

#### NEW QUESTION # 57
