## Plat-Dev-301 Exam Blueprint & Valid Plat-Dev-301 Test Duration

With the rapid development of the world economy and frequent contacts between different countries, the talent competition is increasing day by day, and the employment pressure is also increasing day by day. Our company provides three different versions to choice for our customers. The software version of our Plat-Dev-301 exam question has a special function that this version can simulate test-taking conditions for customers. If you feel very nervous about exam, we think it is very necessary for you to use the software version of our Plat-Dev-301 Guide Torrent. The simulated tests are similar to recent actual exams in question types and degree of difficulty. By simulating actual test-taking conditions, we believe that you will relieve your nervousness before examination.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q25-Q30):

### NEW QUESTION # 25

A Salesforce developer is hired by a multi-national company to build a custom Lightning application that shows employees their employment benefits and earned commissions over time. The application must acknowledge and respect the user's locale context for dates, times, numbers, currency, and currency symbols.

When using Aura components, which approach should the developer implement to ensure the Lightning application complies with the user's locale?

- A. Use the `$User` global variable to retrieve the user preferences.
- B. Create a Hierarchical custom setting to store user preferences.
- **C. Use the `$Locale` value provider to retrieve the user preferences.**
- D. Use the `$Label` global value provider.

**Answer: C**

Explanation:

The `$Locale` value provider should be used to ensure the Lightning application respects the user's locale for dates, times, numbers, currency, and currency symbols. This global value provider gives components access to locale formats and labels, which are automatically rendered according to the user's locale settings.

### NEW QUESTION # 26

Which scenario requires a developer to use an Apex callout instead of Outbound Messaging?

- **A. The target system uses a REST API.**
- B. The target system uses a SOAP API.
- C. The callout needs to be asynchronous.
- D. The callout needs to be invoked from a flow.

**Answer: A**

Explanation:

Outbound Messaging in Salesforce provides a way to send notifications from Salesforce to external applications using SOAP-based web service calls. However, when the target system requires interactions with RESTful web services, a developer must use an Apex callout. This is because Outbound Messaging is limited to SOAP and cannot directly interact with REST APIs. Apex callouts provide the flexibility to make HTTP requests to REST endpoints, thus allowing developers to programmatically interact with virtually any web service provided by external systems.

Apex Web Services and Callouts

Outbound Messaging

### NEW QUESTION # 27

Universal Containers (UC) has an ERP system that stores customer information. When an Account is created in Salesforce, the ERP system's REST endpoint for creating new customers must automatically be called with the Account information. If the call to the ERP system fails, the Account should still be created. Accounts in the UC org are only created, one at a time, by users in the UC customer on-boarding department.

What should a developer implement to make the call to the ERP system's REST endpoint?

- **A. Call a Queueable from a Trigger**
- B. REST call from JavaScript
- C. Apex Continuation
- D. Headless Quick Action

**Answer: A**

Explanation:

Since the requirement is to make a callout to an external ERP system when an Account is created and still allow for the Account creation even if the call fails, a Queueable class called from a trigger is the best solution. Queueable Apex allows you to submit jobs for asynchronous processing similar to future methods but with additional benefits such as chaining jobs and monitoring the job status.

By using a Queueable, the callout can be made after the Account is created, which respects the Salesforce order of execution and avoids the limitation of callouts not being allowed after DML operations in the same transaction. This approach also does not block the user interface or the creation of the Account record if the callout to the ERP system takes a long time or fails.

Salesforce Developer Guide on Asynchronous Apex: Queueable Apex

### NEW QUESTION # 28

Instead of waiting to send emails to support personnel directly from the finish method of a batch Apex process, Universal Containers wants to notify an external system in the event that an unhandled exception occurs. What is the appropriate publish/subscribe logic to meet this requirement?

- A. Publish the error event with a Flow.
- **B. No publishing is necessary. Have the external system subscribe to the BatchApexErrorEvent.**
- C. Publish the error event using the EventBus. publish () method.
- D. Publish the error event using the addError method.

**Answer: B**

Explanation:

Use BatchApexErrorEvent for notifications. It's automatically triggered for unhandled exceptions in batch Apex. No need for manual publishing. External systems can subscribe to this event to receive notifications.

### NEW QUESTION # 29

A developer is responsible for formulating the deployment process for a Salesforce project. The project follows a source-driven development approach, and the developer wants to ensure efficient deployment and version control of the metadata changes. Which tool or mechanism should be utilized for managing the source-driven deployment process?

- A. Force.com IDE
- B. Change Sets
- **C. Salesforce CLI with Salesforce DX**
- D. Metadata API

**Answer: C**

Explanation:

Salesforce CLI with Salesforce DX is the best tool for managing a source-driven deployment process. It facilitates version control, scriptable deployment, and rollback, and is optimized for collaboration and continuous integration.

### NEW QUESTION # 30

.....

Plat-Dev-301 exam preparation also provide you a deep insight knowledge about the Salesforce Plat-Dev-301 exam topics. This knowledge will help you in Salesforce Plat-Dev-301 exam success and career. The Salesforce Plat-Dev-301 Exam Questions require some of your attention. You may use our Salesforce Plat-Dev-301 exam dumps to help you get ready for the real Salesforce Plat-Dev-301 exam.

**Plat-Dev-301 Exam Blueprint:** <https://www.freepdfdump.top/Plat-Dev-301-valid-torrent.html>

Salesforce Plat-Dev-301 Pass Test We release three versions of test questions for each exam: PDF version, Soft version and Test online version, After further practice with Plat-Dev-301 original questions dumps, you will complete your Plat-Dev-301 exam preparation in a short time and attend the actual test with comfortable mood, Salesforce Plat-Dev-301 Pass Test Our payment system will not randomly charge extra money from your accounts.

Defined Benefit Pension Plans, Each server Plat-Dev-301 Test Lab Questions or workstation is configured independently and locally for all security and administration settings, We release three versions Plat-Dev-301 of test questions for each exam: PDF version, Soft version and Test online version.
