

CNX-001인증덤프샘플체험 - CNX-001시험패스인증덤프문제

인기자격증 C-C4H450-04인증덤프 샘플문제 시험덤프 최신자료

ITDumpsKR의 엘리트는 다년간 IT업계에 종사한 노하우로 높은 적중율을 자랑하는 SAP C-C4H450-04덤프를 연구제작하였습니다. 한국어 온라인서비스가 가능하기에 SAP C-C4H450-04덤프에 관하여 궁금한 점이 있으신 분은 구매전 문의하시면 됩니다. SAP C-C4H450-04덤프로 시험에서 좋은 성적 받고 자격증 취득하시길 바랍니다.

최신 SAP Certified Integration Associate C-C4H450-04 무료샘플문제 (Q54-Q59):

질문 #54

How can you determine if a field in the message mapping in SAP Cloud Platform Integration is an extension field?

- A. By the WSDL naming convention
- B. By the mapping functions
- C. By the used namespace
- D. By the mapping icon

정답C

질문 #55

Which transaction codes do you use to register and activate the IDoc service on SAP ERP?

- A. SICF and IDoc, respectively
- B. IDoc and RBDMIDOC, respectively
- C. SRTIDOC and SICF, respectively
- D. SICF and RBDMIDOC, respectively

정답C

질문 #56

Which of the following business functions are supported by SAP S/4HANA Settlement Management? Note: There are 3 correct Answers to this question

- A. Calendar-based settlement
- B. Evaluated receipt settlement
- C. Advance payments
- D. Business-volume-related rebates
- E. Accrual conditions

정답A,B,C

질문 #57

Which of the following views can be maintained for a material with material type SERV (Service

C-C4H450-04인증덤프샘플문제 & C-C4H450-04시험덤프자료

그 외, KoreaDumps CNX-001 시험 문제집 일부가 지금은 무료입니다: https://drive.google.com/open?id=1pr5TlkKcjOQS6yObQMnx_rfJvt36-3Lw

만약 아직도CompTIA CNX-001시험패스를 위하여 고군분투하고 있다면 바로 우리 KoreaDumps를 선택함으로 여러분의 고민을 날려버릴 수 있습니다, 우리 KoreaDumps에서는 최고의 최신의 덤프자료를 제공 함으로 여러분을 도와 CompTIA CNX-001인증자격증을 쉽게 취득할 수 있게 해드립니다. 만약CompTIA CNX-001인증시험으로 한층 업그레이드된 자신을 만나고 싶다면 우리KoreaDumps선택을 후회하지 않을 것입니다, 우리KoreaDumps과의 만남으로 여러분은 한번에 아주 간편하게CompTIA CNX-001시험을 패스하실 수 있으며,CompTIA CNX-001자격증으로 완벽한 스펙을 쌓으실 수 있습니다,

IT업계에 종사하시는 분은 국제공인 IT인증자격증 취득이 얼마나 힘든지 알고 계실것입니다. 특히 시험이 영어로 되어있어 부담을 느끼시는 분도 계시는데 KoreaDumps를 알게 된 이상 이런 고민은 버리셔도 됩니다. KoreaDumps의CompTIA CNX-001덤프는 모두 영어버전으로 되어있어CompTIA CNX-001시험의 가장 최근 기출문제를 분석하여 정답까지 작성해두었기에 문제와 답만 외우시면 시험합격가능합니다.

CNX-001시험패스 인증덤프문제, CNX-001 100% 시험패스 공부자료

KoreaDumps 의 IT전문가들이 자신만의 경험과 끊임없는 노력으로 최고의 CompTIA CNX-001 학습자료를 작성해 여러분들이 CompTIA CNX-001 시험에서 패스하도록 최선을 다하고 있습니다. 덤프는 최신 시험문제를 커버하고 있어 시험패스율이 높습니다. CompTIA CNX-001 시험을 보기로 결심한 분은 가장 안전하고 가장 최신인 적응율 100%에 달하는 CompTIA CNX-001 시험대비덤프를 KoreaDumps에서 받을 수 있습니다.

최신 CloudNetX CNX-001 무료샘플문제 (Q79-Q84):

질문 # 79

A network administrator needs to resolve connectivity issues in a hybrid cloud setup. Workstations and VMs are not able to access Application A. Workstations are able to access Server B.

INSTRUCTIONS

Click on workstations, VMs, firewalls, and NSGs to troubleshoot and gather information. Type help in the terminal to view a list of available commands.

Select the appropriate device(s) requiring remediation and identify the associated issue(s).

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

정답:

설명:

See explanation below.

Explanation:

Firewalls # VPN tunnel down

The IPsec tunnel between on-prem Firewall 1 and cloud Firewall 2 (pip0/pip2) is down, so no traffic can traverse to the cloud.

Application NSG # Misconfigured rule

There's a "block" rule for 10.3.9.0/24 # 192.2.1.0/24, preventing legitimate on-prem clients from reaching Application A.

질문 # 80

A company is replacing reserved public IP addresses with dynamic IP addresses. The network architect creates a list of assets with some dependencies to these reserved IPs:

(Refer to image: Reserved IPs are in use by NSGs, VMs, load balancers, and one is unallocated.) Which of the following issues may begin to affect cloud assets after the replacement is made?

- A. IP spoofing
- B. IP exhaustion
- C. IP reuse
- D. IP asymmetric routing

정답: C

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Replacing reserved IPs with dynamic ones can lead to IP reuse issues. Dynamic public IPs can be reallocated to other customers once released. If DNS entries or firewall rules still refer to the original IP, this can lead to data leakage or incorrect routing. Also, some services (e.g., NSGs, load balancers) may require persistent IPs.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Public IP Management in Cloud Environments":

"Dynamic public IPs are subject to reuse after release. Services that rely on IP persistence, such as security groups or load balancers, may encounter unexpected behavior or security risks if replaced with dynamically assigned IPs." Other options:

- * A. Asymmetric routing involves traffic leaving and returning via different paths.
- * B. IP spoofing is a malicious attack, not related to address reassignment.
- * C. IP exhaustion relates to resource limits, not dynamic reuse.

질문 # 81

A company's IT department is expected to grow from 100 to 200 employees, and the sales department is expected to grow from 1,000 to a maximum of 2,000 employees. Each employee owns a single laptop with a single IP allocated. The network architect wants to deploy network segmentation using the IP range 10.0.0.0

/8. Which of the following is the best solution?

- A. Allocate 10.1.0.0/16 to the IT department. Allocate 10.2.1.0/24 to the sales department.
- B. Allocate 10.1.0.0/30 to the IT department. Allocate 10.2.0.0/16 to the sales department.
- **C. Allocate 10.1.0.0/22 to the IT department. Allocate 10.2.0.0/15 to the sales department.**
- D. Allocate 10.1.0.0/16 to the IT department. Allocate 10.2.1.0/25 to the sales department.

정답: C

설명:

A /22 gives you 1,022 usable addresses, ample headroom for 200 IT laptops, while a /15 yields 32,766 addresses, covering up to 2,000 sales laptops with room to grow, all within the 10.0.0.0/8 space.

질문 # 82

After a company migrated all services to the cloud, the security auditor discovers many users have administrator roles on different services. The company needs a solution that:

- * Protects the services on the cloud
- * Limits access to administrative roles
- * Creates a policy to approve requests for administrative roles on critical services within a limited time
- * Forces password rotation for administrative roles
- * Audits usage of administrative roles

Which of the following is the best way to meet the company's requirements?

- A. Access control list
- B. Conditional access
- C. Session-based token
- **D. Privileged access management**

정답: D

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Privileged Access Management (PAM) is the optimal solution to control, audit, and secure administrative access to systems and services. PAM enables role-based approval workflows, time-limited access, auditing, and credential rotation, fully aligning with the requirements.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Identity and Access Controls":

"Privileged Access Management allows fine-grained control over administrator-level access, supports just-in-time access provisioning, password rotation, and audit logging." Other options:

- * B. Session-based tokens allow temporary access but do not enforce policies or auditing.
- * C. Conditional access provides policy enforcement based on context but lacks full PAM features.
- * D. ACLs control access to resources but don't manage privilege workflows or audits.

질문 # 83

A company deployed new applications in the cloud and configured a site-to-site VPN to connect the internal data center with the cloud. The IT team wants the internal servers to connect to those applications without using public IP addresses. Which of the following is the best solution?

- A. Configure a NAT server on the cloud to allow internal servers to connect to the applications through the NAT server.
- B. Register applications on the cloud with a public DNS server and configure internal servers to connect to them using their public DNS names.
- **C. Create a DNS server in the cloud. Configure the DNS server in the customer data center to forward DNS requests for cloud resources to the cloud DNS server.**
- D. Configure proxy service in the site-to-site VPN to allow internal servers to access applications through the proxy.

정답: C

설명:

By forwarding only the cloud application DNS queries to a cloud-hosted DNS zone that returns private IP addresses, your internal servers will resolve and connect over the site-to-site VPN without ever touching public IPs.
