2026 100% Free Mule-Dev-202 –High Pass-Rate 100% Free Download Pdf | Salesforce Certified MuleSoft Hyperautomation Developer Test Tutorials

After using our Mule-Dev-202 learning materials, you will find that things that have been difficult before have become simple. Of course, that's because you are better. Opportunities are for those who are prepared. And our Mule-Dev-202 exam questions are the right tool to help you get prepared. With the most up-to-date knowledge and information of the Mule-Dev-202 Practice Braindumps, you can be capable to deal with all of the conditions in your job. Believe it, good people will be better!

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q14-Q19):

NEW QUESTION # 14
What is the difference between Run and Debug modes in Flow Builder?

- A. Run mode is only available for active flows.
- B. Debug mode displays details for debugging the flow.
- C. Run mode uses the latest version of the flow.
- D. Debug mode uses Al to fix any bugs in the flow.

Answer: B

Explanation:
In Flow Builder, Run and Debug modes have distinct functionalities:
Run Mode:
Executes the flow as it is, allowing you to see the end-to-end execution based on the latest saved version.
Typically used to verify that the flow works as expected under normal conditions.
Debug Mode:
Provides detailed information for each step of the flow, including input and output data, and any errors encountered.
Useful for troubleshooting and identifying issues within the flow, allowing developers to understand how the flow executes and where problems may arise.
Debug mode is specifically designed to aid in diagnosing and fixing issues by providing a granular view of the flow's execution.

NEW QUESTION # 15
Northern Trail Outfitters (NTO) is building a hyperautomation solution using Salesforce and MuleSoft. Their Salesforce admin needs to automate a comprehensive, multi-step process that a single user will execute after a case record is created.
How should the Salesforce Flow solution be structured to meet this requirement?

- A. A single flow Orchestration that uses Stages and Steps to organize automated actions and process user inputs
- B. An autolaunched flow that will process user inputs and conditional logic to automate the process in Salesforce
- C. A screen flow to process user inputs and an autolaunched flow to process backend steps automatically
- D. A parent flow with subflows to help organize automated actions and generate reusable components

Answer: A

Explanation:
To address the comprehensive, multi-step process automation requirement at Northern Trail Outfitters (NTO), a single flow orchestration that uses Stages and Steps is the best solution.
Flow Orchestration in Salesforce:
Stages and Steps:Flow Orchestration allows Salesforce admins to build sophisticated automations by structuring the flow into Stages (representing different parts of the process) and Steps (individual actions within each Stage).
User Inputs and Automated Actions:By leveraging Stages and Steps, Salesforce Flow Orchestration can handle both user inputs and backend automated steps seamlessly, ensuring the entire process is automated and organized efficiently.
Error Handling and Conditional Logic:It also allows for conditional logic and error handling, ensuring that the flow can adapt to various scenarios that may arise during the automation process.
Comprehensive Process Automation:
Single User Execution:Given that the requirement specifies that a single user will execute the process after a case record is created, Flow Orchestration is ideal as it can manage the end-to-end process in a structured manner, without requiring multiple flows or complex configurations.
References:
Salesforce documentation on Flow Orchestration provides detailed insights on how to design and implement such solutions.

NEW QUESTION # 16
Which Connected App scope should be used to connect RPA Manager with an Anypoint Platform account?

- A. RPA Integrator
- B. API Catalog Contributor
- C. Application Creator
- D. Exchange Administrator

Answer: A

Explanation:
To connect RPA Manager with an Anypoint Platform account, the appropriate Connected App scope isRPA Integrator:
RPA Integrator Scope:
The RPA Integrator scope is designed to provide the necessary permissions for integrating RPA Manager with Anypoint Platform. This scope allows the connected app to interact with the RPA Manager and manage RPA processes.
Connected App Configuration:
When setting up a connected app in Anypoint Platform, select the RPA Integrator scope to ensure that the integration can access and manage the RPA processes as required.

MuleSoft RPA Documentation
Anypoint Platform Connected Apps Documentation

NEW QUESTION # 17
AnyAirlines selected AWS Cloud services as their infrastructure platform. They need to implement Anypoint Platform as the integration solution along with existing cloud capabilities like vertical/horizontal scalability and zero downtime redeployments.
Which type of deployment strategy is needed?

- A. Private Cloud Edition
- B. Hybrid
- C. Runtime Fabric
- D. Cloudhub

Answer: C

Explanation:
Anypoint Runtime Fabric:Anypoint Runtime Fabric (RTF) is designed for deploying Mule applications on any cloud infrastructure, including AWS. It supports vertical and horizontal scalability and enables zero- downtime deployments, which aligns with AnyAirlines' requirements.
Reference:Anypoint Runtime Fabric Overview
Vertical/Horizontal Scalability:RTF allows scaling applications both vertically (adding more resources to existing nodes) and horizontally (adding more nodes to the cluster). This ensures high availability and performance.
Reference:Runtime Fabric Scalability
Zero Downtime Deployments:RTF supports zero-downtime deployments by utilizing rolling updates and canary deployments, ensuring that updates do not disrupt ongoing operations.
Reference:Zero Downtime Deployment with RTF
AWS Integration:RTF can be deployed on AWS, leveraging existing cloud infrastructure capabilities and providing a seamless integration experience.
Reference:Deploying RTF on AWS

NEW QUESTION # 18
An AnyAirlines employee determines that an RPA process is a strong candidate for automation. When approving the process, the employee needs to specify a group of potential users to manage the RPA process throughout its lifecycle.
According to best practices, which group should the employee choose?

- A. Scrum team
- B. Multiple project managers
- C. Center of Excellence

- D. Center for Enablement

Answer: C

Explanation:
When approving an RPA process and specifying a group of potential users to manage it throughout its lifecycle, the best practice is to choose the Center of Excellence (CoE):
Center of Excellence (CoE):
The CoE is a team of experts who are responsible for overseeing the implementation, governance, and management of RPA processes within the organization.
They ensure that best practices are followed, provide guidance and support to project teams, and manage the overall RPA strategy and roadmap.
Lifecycle Management:
The CoE is well-equipped to manage the RPA process from initial development through deployment and ongoing maintenance. They have the expertise to handle any issues that arise and ensure the process remains efficient and effective.
Best Practices:
By involving the CoE, the organization ensures that the RPA process adheres to established best practices, maintains high quality, and delivers the expected benefits.
