Once you use our 3V0-24.25 exam materials, you don't have to worry about consuming too much time, because high efficiency is our great advantage. You only need to spend 20 to 30 hours on practicing and consolidating of our 3V0-24.25 learning material, you will have a good result. After years of development practice, our 3V0-24.25 test torrent is absolutely the best. You will embrace a better future if you choose our 3V0-24.25 exam materials.

Under the tremendous stress of fast pace in modern life, this version of our 3V0-24.25 test prep suits office workers perfectly. It can match your office software and as well as help you spare time practicing the 3V0-24.25 exam. As for its shining points, the PDF version can be readily downloaded and printed out so as to be read by you. It's really a convenient way for those who are fond of paper learning. With this kind of version, you can flip through the pages at liberty and quickly finish the check-up 3V0-24.25 Test Prep. And you can take notes on this version of our 3V0-24.25 exam questions.

## TOP Test 3V0-24.25 Dumps - Trustable VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service - 3V0-24.25 Exam Questions Fee

When they will be giving their final examination to get VMware 3V0-24.25 certification they don't struggle much and do it easily. The results of the customizable 3V0-24.25 exam dumps can then be used to identify areas of strength and weakness and to create a personalized study plan that focuses on improving in the areas that need the most work. Taking 3V0-24.25 Practice Tests regularly could help individuals build their confidence, reduce test anxiety, and improve their overall performance.

### VMware 3V0-24.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>VMware Products and Solutions: Focuses on configuring vSphere Supervisor capabilities, networking, storage, identity, and access for Kubernetes clusters. It also covers managing Kubernetes releases, CNIs, NSX networking objects, TLS certificates, and securing VKS clusters.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Troubleshoot and optimize the VMware Solution: Focuses on diagnosing and resolving provisioning, connectivity, namespace, VM class, storage, networking, container, registry, and CA errors. It also includes recovering failed upgrades and optimizing cluster performance using monitoring and scaling tools.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Install, Configure, Administrate the VMware Solution: Includes creating and managing Supervisor clusters, namespaces, zones, workloads, and add-on services. Also covers provisioning, scaling, updating VKS clusters, autoscalers, storage strategies, workload deployments, backup</li> <li>• restore, and editing YAML configurations.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• IT Architectures, Technologies, Standards: This section covers the differentiation between VMs and containers, helping determine the appropriate compute model. It also includes understanding Kubernetes architecture, networking, storage, service mesh, Helm, and reference architectures for VKS deployments.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Plan and Design the VMware Solution: Covers evaluating the impact of load balancer sizing, namespace network options, and vSphere namespace architecture. It includes planning processes for enabling Supervisor clusters and implementing service mesh.</li> </ul>

## VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q68-Q73):

### NEW QUESTION # 68

A VI Administrator needs to configure a Supervisor Cluster to download the latest supported Tanzu Kubernetes releases automatically from VMware over the internet.

Review the configuration steps:

1. Navigate to vSphere Client > Content Libraries.
2. Click Create New Content Library.
3. Name: Tanzu-Kubernetes-Lib.

Which specific settings must be applied in the subsequent configuration screens to meet the requirement?

- A. Select Local content library and enable "Optimize for syncing".
- B. Select Subscribed content library and choose the option "Enable publishing".
- **C. Select Subscribed content library and provide the official VMware TKG subscription URL.**
- D. Select Local content library and manually upload the OVAs downloaded from Customer Connect.

**Answer: C**

### NEW QUESTION # 69

What open-source project enables automated lifecycle management of VMware vSphere Kubernetes Service (VKS) clusters?

- A. Grafana
- **B. Cluster API**
- C. kubeadm
- D. Contour

**Answer: B**

Explanation:

VCF 9.0 describes VKS as providing self-service, declarative lifecycle management for Kubernetes clusters and explicitly identifies Cluster API as the mechanism that enables Kubernetes-style lifecycle automation. The documentation states that "The Cluster API provides declarative, Kubernetes-style APIs for cluster creation, configuration, and management," and that its inputs include resources describing "the virtual machines that make up the cluster" plus "cluster add-ons." This directly maps to automated lifecycle management: a desired-state YAML is reconciled by controllers that create, update, and maintain the control plane and worker node resources without manual, imperative procedures.

The same VCF 9.0 content also notes VKS exposes "three layers of controllers" for lifecycle management and lists Cluster API as one of those layers, reinforcing that Cluster API is foundational for ongoing cluster operations (create, scale, upgrade, reconcile). Contour is an ingress controller (traffic routing), kubeadm is a Kubernetes bootstrap tool (not the VKS lifecycle controller framework), and Grafana is observability/visualization (not cluster lifecycle).

### NEW QUESTION # 70

A VI Administrator is managing the lifecycle of VM images used by the VM Service. A new corporate standard requires that all Linux VMs deployed via kubectl must use the hardened image corp-linux- v2.ova. The administrator has uploaded the new OVA to the Corporate-Images Content Library. How can the administrator ensure that developers can immediately begin deploying VMs using this new image name in their YAML? (Select all that apply.)

- A. Ensure the Corporate-Images Content Library is assigned to the developers' vSphere Namespace.
- B. The developers must change the kind in their YAML to VirtualMachineImage.
- C. The administrator must manually restart the wcp-vmop-controller pod on the Supervisor to recognize the new image.
- D. The VM Service automatically syncs and discovers new images in assigned libraries; the developers can reference corp-linux-v2 in the spec.imageName field once the sync completes.
- E. The administrator must create a "VM Image" custom resource object in Kubernetes mapping the OVA UUID to a name.

Answer: A,D

#### NEW QUESTION # 71

What statement describes the vSphere Supervisor in VMware Cloud Foundation (VCF)?

- A. vSphere Supervisor delivers a consistent Service consumption experience with an embedded Declarative Kubernetes API.
- B. vSphere Supervisor runs a proprietary version of the Kubernetes scheduler.
- C. vSphere Supervisor supports running Kubernetes pods on any hyperscaler.
- D. vSphere Supervisor provides vSphere services to a platform administrator.

Answer: A

Explanation:

In the architecture of VMware Cloud Foundation (VCF) 9.0, the vSphere Supervisor represents the evolution of the vSphere control plane into a Kubernetes-native platform. The Supervisor is not simply a management tool; it is a specialized Kubernetes cluster that runs directly on the ESXi hypervisor layer. Its primary function is to deliver a consistent Service consumption experience by embedding a declarative Kubernetes API into the infrastructure. This allows both platform administrators and developers to provision and manage resources- such as Tanzu Kubernetes clusters, Virtual Machines, and vSphere Pods-using standard Kubernetes manifests and tools.

By leveraging a declarative model, the vSphere Supervisor ensures that the actual state of the environment always matches the "desired state" defined by the user. This "infrastructure-as-code" approach is central to VCF 9.0, as it bridges the gap between traditional IT operations and modern DevOps workflows. Unlike Option B, the Supervisor is specifically designed for vSphere environments and is not a multi-cloud hyperscaler abstraction. Furthermore, while it integrates deeply with vSphere's Distributed Resource Scheduler (DRS) for optimal placement, it adheres to Kubernetes API standards rather than operating a completely proprietary, non-standard scheduler. This integration enables VCF to provide a robust, enterprise-grade platform that treats infrastructure services as first-class Kubernetes objects, simplifying the deployment and scaling of complex, modern applications.

#### NEW QUESTION # 72

A VKS Administrator manages a fleet of TKG clusters running the tanzu-standard package repository version v1.6.0. A critical CVE has been identified in the installed version of Fluent Bit, which is resolved in package repository version v2.0.0.

What is the correct procedure to update the available packages on a target cluster to the new version? (Choose 2.)

- A. Delete the PackageRepository object and recreate it with the same name but the new URL; this will automatically upgrade all installed packages immediately.
- B. Manually uninstall the old Fluent Bit package and reinstall it using helm install from a local chart.
- C. Wait for the kapp-controller to reconcile the change. Once the repository status is ReconcileSucceeded, the new package versions (e.g., Fluent Bit 2.x) will be listed in kubectl get packages.
- D. Use kubectl to update the PackageRepository CR named tanzu-standard in the cluster, changing the spec.fetch.imagepkgBundle.image tag to the new version (v2.0.0).
- E. Update the vSphere Supervisor version; package repositories are immutable and tied strictly to the Supervisor release.

Answer: C,D
