Our products will help you get what you want in a short time.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q124-

Q129):

NEW QUESTION # 124

Which of the following is the BEST indication of a highly effective privacy training program?

- A. No privacy incidents have been reported in the last year
- B. Recent audits have no findings or recommendations related to data privacy
- C. HR has made privacy training an annual mandate for the organization
- D. Members of the workforce understand their roles in protecting data privacy

Answer: D

Explanation:
CDPSE emphasizes outcomes of training-measurable role-based understanding and behavior-over mere completion or absence of incidents. HR mandates (B) and clean audits (D) show activity or point-in-time results, not sustained effectiveness. No incidents (A) is not a reliable indicator of program quality.
Key CDPSE-aligned phrasing (short extract): "Effective awareness is role-based and demonstrated in behavior."

NEW QUESTION # 125

Which of the following zones within a data lake requires sensitive data to be encrypted or tokenized?

- A. Clean zone
- B. Temporal zone
- C. Trusted zone
- D. Raw zone

Answer: D

Explanation:
A raw zone is a zone within a data lake that contains unprocessed or unstructured data that is ingested from various sources without any transformation or validation. A raw zone may contain sensitive data that has not been identified or classified yet, such as personal data. Therefore, sensitive data in a raw zone should be encrypted or tokenized to protect its confidentiality and integrity. Encryption is a process of transforming data into an unreadable form using a secret key or algorithm. Tokenization is a process of replacing sensitive data with non-sensitive substitutes called tokens. Both encryption and tokenization help to prevent unauthorized or unlawful access, use, disclosure, or transfer of sensitive data in a raw zone. NEW QUESTION # 126

An organization is concerned with authorized individuals accessing sensitive personal customer information to use for unauthorized purposes. Which of the following technologies is the BEST choice to mitigate this risk?

- A. User behavior analytics
- B. Intrusion monitoring
- C. Mobile device management (MDM)
- D. Email filtering system

Answer: A

Explanation:
Explanation
User behavior analytics is a technology that uses data analysis and machine learning to monitor, detect and respond to anomalous or malicious user activities, such as accessing sensitive personal customer information to use for unauthorized purposes. User behavior analytics is the best choice to mitigate this risk, as it would help to identify and prevent insider threats, data breaches, fraud or misuse of data by authorized individuals.
User behavior analytics can also help to enforce policies and controls, such as access control, audit trail or data loss prevention. The other options are not as effective as user behavior analytics in mitigating this risk. Email filtering system is a technology that scans and blocks incoming or outgoing emails that contain spam, malware or phishing attempts, but it does not address the issue of authorized individuals accessing sensitive personal customer information to use for unauthorized purposes. Intrusion monitoring is a technology that monitors and alerts on unauthorized or malicious attempts to access a system or network, but it does not address the issue of authorized individuals accessing sensitive personal customer information to use for unauthorized purposes. Mobile device

management (MDM) is a technology that manages and secures mobile devices that are used to access or store organizational data, but it does not address the issue of authorized individuals accessing sensitive personal customer information to use for unauthorized purposes1, p. 92 References: 1:

NEW QUESTION # 127

When configuring information systems for the communication and transport of personal data, an organization should:

- A. adopt the default vendor specifications.
- B. implement the least restrictive mode.
- C. enable essential capabilities only.
- D. review configuration settings for compliance.

Answer: D

NEW QUESTION # 128

A software development organization with remote personnel has implemented a third-party virtualized workspace to allow the teams to collaborate. Which of the following should be of GREATEST concern?

- A. Personal data could potentially be exfiltrated through the virtual workspace.
- B. There is a lack of privacy awareness and training among remote personnel.
- C. The third-party workspace is hosted in a highly regulated jurisdiction.
- D. The organization's products are classified as intellectual property.

Answer: A
