# Pass Guaranteed Accurate Splunk - SPLK-3002 - Flexible Splunk IT Service Intelligence Certified Admin Testing Engine

2026 Latest ExamCost SPLK-3002 PDF Dumps and SPLK-3002 Exam Engine Free Share: https://drive.google.com/open?id=1bLuNYjKLeMGvMJSAH-BsjupmPO410N7D

If you cannot fully believe our SPLK-3002 exam prep, you can refer to the real comments from our customers on our official website before making a decision. There are some real feelings after they have bought our study materials. Almost all of our customers have highly praised our SPLK-3002 exam guide because they have successfully obtained the certificate. What's more, all contents are designed carefully according to the exam outline. As you can see, the quality of our SPLK-3002 Exam Torrent can stand up to the test. Your learning will be a pleasant process.

Splunk SPLK-3002: Splunk IT Service Intelligence Certified Admin exam is a certification exam that aims to test the skills and knowledge of IT professionals in using Splunk IT Service Intelligence (ITSI) to manage and monitor their IT services. SPLK-3002 Exam is designed to test the candidate's ability to configure and deploy ITSI, create service models, set up KPIs, and build dashboards to monitor the performance of IT services.

## SPLK-3002 Valid Exam Tips | Cert SPLK-3002 Guide

Our company's staff conducted a rigorous analysis of the user's characteristics, so our staff created these three versions of our SPLK-3002 study guide for you to choose: the PDF, Software and APP online. The PDF verson can be printable. And the Software version of our SPLK-3002 Practice Engine can simulate the real exam and apply in Windows system. App online version can apply to all kinds of the eletronic devices. Our SPLK-3002 exam questions are always thinking about customers and hopes that you can be satisfied in all aspects.

Splunk SPLK-3002 certification exam is designed to test the knowledge and skills of individuals who work with Splunk IT Service Intelligence (ITSI). Splunk ITSI is a powerful monitoring and analytics platform that helps organizations gain insights into their IT operations and improve service delivery. By earning the SPLK-3002 certification, IT professionals can demonstrate their expertise in using Splunk ITSI to solve complex IT problems and optimize service performance.

To pass the SPLK-3002 Exam, candidates must demonstrate their knowledge of ITSI features and functionalities, such as service insights, entity analytics, notable events, and glass tables. They must also be able to configure ITSI components, such as services, KPIs, and service-level agreements (SLAs), and use advanced search techniques to identify and resolve IT issues.

## Splunk IT Service Intelligence Certified Admin Sample Questions (Q43-Q48):

**NEW QUESTION # 43**

ITSI Saved Search Scheduling is configured to use realtime_schedule = 0. Which statement is accurate about this configuration?

- A. If this value is set to 0, the scheduler bases its determination of the next scheduled search on the last search execution time.
- B. If this value is set to 0, the scheduler bases its determination of the next scheduled search execution time on the current time.
- C. If this value is set to 0, the scheduler may skip scheduled execution periods.
- D. If this value is set to 0, the scheduler might skip some execution periods to make sure that the scheduler is executing the searches running over the most recent time range.

**Answer: A**

Explanation:

ITSI Saved Search Scheduling is a feature that allows you to schedule searches that run periodically to populate the data for your KPIs. You can configure various settings for your scheduled searches, such as the search frequency, the time range, the cron expression, and so on. One of the settings is realtime_schedule, which controls the way the scheduler computes the next execution time of a scheduled search. The statement that is accurate about this configuration is:

* B. If this value is set to 0, the scheduler bases its determination of the next scheduled search on the last search execution time. This is called continuous scheduling. If set to 0, the scheduler never skips scheduled execution periods. However, the execution of the saved search might fall behind depending on the scheduler's load. Use continuous scheduling whenever you enable the summary index option.

The other statements are not accurate because:

* A. If this value is set to 0, the scheduler bases its determination of the next scheduled search execution time on the current time. This is not true because this is what happens when the value is set to 1, not 0.

* C. If this value is set to 0, the scheduler may skip scheduled execution periods. This is not true because this is what happens when the value is set to 1, not 0.

* D. If this value is set to 0, the scheduler might skip some execution periods to make sure that the scheduler is executing the searches running over the most recent time range. This is not true because this is what happens when the value is set to 1, not 0.

**NEW QUESTION # 44**

For which ITSI function is it a best practice to use a 15-30 minute time buffer?

- A. Anomaly detection.
- B. Correlation searches.
- C. Adaptive thresholding.
- D. Maintenance windows

**Answer: C**

Explanation:

B is the correct answer because adaptive thresholding is a feature of ITSI that allows you to dynamically adjust KPI thresholds based on historical patterns and trends. Adaptive thresholding requires a time buffer of at least 15 minutes to calculate the thresholds based on the previous data points. The time buffer ensures that there is enough data to perform the calculations and avoid false positives or negatives. Reference: Configure adaptive thresholding for a KPI in ITSI

**NEW QUESTION # 45**

Which of the following is a good use case for creating a custom module?

- A. Modules are required to create entity and service import searches.
- B. Making it easy to migrate KPI base searches and related visualizations to other ITSI installations.
- C. Creating a service template to make it easy to automatically create new services during service and entity import.
- D. Modules are required to be able to create custom visualizations for deep dives.

**Answer: B**

Explanation:

Creating a custom module in Splunk IT Service Intelligence (ITSI) is particularly beneficial for the purpose of migrating KPI base searches and related visualizations to other ITSI installations. Custom modules can encapsulate a set of configurations, searches, and

visualizations that are tailored to specific monitoring needs or environments. By packaging these elements into a module, it becomes easier to transfer, deploy, and maintain consistency across different ITSI instances. This modularity supports the reuse of developed components, simplifying the process of scaling and replicating monitoring setups in diverse operational contexts. The ability to migrate these components seamlessly enhances operational efficiency and ensures that best practices and custom configurations can be shared across an organization's ITSI deployments.

## NEW QUESTION # 46

There are two departments using ITSI. Finance and Sales. Analysts in each department should not be allowed to see each other's services. What are the role configuration steps required to accomplish this?

- A. itoa_finance_admin, inherited from itoa_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_team_analyst; itoa_sales_analyst, inherited from itoa_team_analyst.
- B. itoa_finance_admin, inherited from itoa_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_analyst; itoa_sales_analyst, inherited from itoa_analyst.
- C. itoa_finance_admin, inherited from itoa_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_analyst; itoa_sales_analyst, inherited from itoa_team_analyst.
- D. itoa_finance_admin, inherited from itoa_team_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_analyst; itoa_sales_analyst, inherited from itoa_analyst.

**Answer: C**

## NEW QUESTION # 47

Which of the following is a characteristic of notable event groups?

- A. Notable event groups are created in the itsi_tracked_alerts index.
- B. Notable event groups combine independent notable events.
- C. Notable event groups allow users to adjust threshold settings.
- D. All of the above.

**Answer: B**

Explanation:
In Splunk IT Service Intelligence (ITSI), notable event groups are used to logically group related notable events, which enhances the manageability and analysis of events:
A) Notable event groups combine independent notable events: This characteristic allows for the aggregation of related events into a single group, making it easier for users to manage and investigate related issues. By grouping events, users can focus on the broader context of an issue rather than getting lost in the details of individual events.
While notable event groups play a critical role in organizing and managing events in ITSI, they do not inherently allow users to adjust threshold settings, which is typically handled at the KPI or service level. Additionally, while notable event groups are utilized within the ITSI framework, the statement that they are created in the 'itsi_tracked_alerts' index might not fully capture the complexity of how event groups are managed and stored within the ITSI architecture.
