## New SAP C\_CPI\_2506 Dumps Ebook | C\_CPI\_2506 Practice Exam Pdf

These SAP C\_CPI\_2506 exam practice tests identify your mistakes and generate your result report on the spot. To make your success a certainty, TestInsides offers free updates on our SAP C\_CPI\_2506 real dumps for up to three months. It means all users

get the latest and updated SAP C\_CPI\_2506 practice material to clear the SAP Certified Associate - Integration Developer C\_CPI\_2506 certification test on the first try. We are a genuine brand working to smoothen up your C\_CPI\_2506 exam preparation.

## SAP Certified Associate - Integration Developer Sample Questions (Q28-Q33):

### NEW QUESTION # 28

What minimum user permission is required to create a queue within the emis-s4hana message client?

- A. Eemis-s4hana message client administrators group membership
- **B. Role collections for Event Mesh**
- C. Sufficient authorization within the emis-s4hana system
- D. Administrator privileges on the Event Mesh

**Answer: B**

Explanation:

In SAP Integration Suite, Event Mesh (EMIS), queue creation and management requires specific role collections assigned to the user in SAP BTP:

EventMeshAdmin # Provides full administration rights (create, delete, configure queues, topics, subscriptions).

EventMeshDeveloper # Allows development tasks, including working with queues and topic subscriptions.

Other options are not correct:

Message client administrators group membership # Not a BTP role collection concept.

Administrator privileges on Event Mesh # Too generic; the system enforces access through role collections.

Sufficient authorization within emis-s4hana system # S/4HANA authorizations do not govern Event Mesh capabilities.

Thus, the minimum permission required is assignment of the Event Mesh role collections in BTP.

### NEW QUESTION # 29

Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Subaccount ID
- B. Connector ID
- **C. Location ID**
- D. Host

**Answer: C**

Explanation:

To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. Reference: Cloud Connector Connectivity Tests | SAP Help Portal, Cloud Connector Configuration | SAP Help Portal

### NEW QUESTION # 30

Which expression language can you use to access the content of a message in an integration flow?

- **A. Simple expression language**
- B. XML expression language
- C. JavaScript expression language
- D. Spring expression language

**Answer: A**

Explanation:

In SAP Cloud Integration, the runtime message content, headers, and properties can be accessed using the Camel Simple Expression Language.

Examples:

`${body}` # Accesses the message payload.

`${header.<headerName>}` # Accesses message headers.

`${property.<propertyName>}` # Accesses integration properties.

Other options:

XML expression language # Not supported directly.

Spring expression language # Used in Spring apps, not in SAP CPI.

JavaScript expression language # Not used; JavaScript/Groovy scripts exist, but not for message expressions.

Thus, the correct language is Simple expression language.

### NEW QUESTION # 31

You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401. What could be a reason?

- A. In the AssignMessage policy, the Assign To tag has the type="postFlow"
- B. In the AssignMessage policy, the Assign To tag has the type="preFlow"
- C. In the AssignMessage policy, the Assign To tag has the type="response"
- **D. In the AssignMessage policy, the Assign To tag has the type="request"**

**Answer: D**

Explanation:

In API Management (SAP Integration Suite), when implementing Basic Authentication policies:

If the AssignMessage policy does not correctly assign credentials to the request message, authentication will fail.

This results in HTTP 401 Unauthorized.

Other tags like preFlow, postFlow, response are policy flow phases, but the credentials must be applied to the request for proper authentication.

Thus, the root cause is when the Assign To = request is missing/misconfigured.

### NEW QUESTION # 32

You want to set up Exchange Properties in an integration flow. Besides a Content Modifier, what can you use?

- A. Batch scripting
- B. Python scripting
- **C. Groovy SDK scripting**
- D. XML scripting

**Answer: C**

Explanation:

In SAP Cloud Integration, Exchange Properties can be created and set using:

Content Modifier # Standard way to configure properties.

Groovy Scripting # Via the SAP CPI Groovy SDK, you can dynamically add or update exchange properties at runtime.

Other options:

Batch scripting, XML scripting, Python scripting # Not supported in SAP CPI.

Thus, besides Content Modifier, you use Groovy SDK scripting.

### NEW QUESTION # 33

.....

One of features of C\_CPI\_2506 training materials of us is that we can help you pass the exam just one time, and we also pass guarantee and money back guarantee for you fail to pass the exam. You just need to send your failure scanned to us, and we will give you full refund. In addition, C\_CPI\_2506 exam dumps contain both questions and answers, which can help you have a quickly check after you finish your practice. We also have online and offline chat service stuff, they possess the professional knowledge about the C\_CPI\_2506 Training Materials, if you have any questions just contact us.
