## Get Updated ISTQB ISTQB-CTAL-TA Exam Questions with 1 year Free Updates

Do you worry about not having a long-term fixed study time? Do you worry about not having a reasonable plan for yourself? ISTQB-CTAL-TA exam dumps will solve this problem for you. Based on your situation, including the available time, your current level of knowledge, our study materials will develop appropriate plans and learning materials. Whatever you want to choose, you want to learn from which stage. In our study materials, you can find the right one for you. At the same time, the ISTQB-CTAL-TA Exam Prep is constantly updated. After you have finished learning a part, you can choose a new method according to your own situation. Our study materials are so easy to understand that no matter who you are, you can find what you want here.

ISTQB CTAL-TA Exam covers a wide range of topics, including test analysis and design, testing techniques, test management, and defect management. It is a comprehensive program that aims to equip test analysts with the necessary skills to identify and resolve issues in software products effectively. ISTQB-CTAL-TA Exam is conducted in a multiple-choice format and consists of 60 questions that have to be answered within three hours. The passing score for ISTQB-CTAL-TA exam is 65%.

## ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q31-Q36):

### NEW QUESTION # 31

Consider the following decision table:

	1	2	3	4	5	6	7	8
C1	1	1	1	1	0	0	0	0
C2	1	1	0	0	1	1	0	0
C3	1	0	1	0	1	0	1	0
A1	X	X						
A2	X							

This decision table has been created to test the following specification: Persons that study at a university (C1) and have parents whose total annual income is less than € 30.000 (C2), receive a scholarship In in addition to these qualifications, if they also live away from home (C3), they receive an addition to their scholarship (A2) How many cases are left when this decision table is collapsed?

- A. 0
- B. 1
- **C. 2**
- D. 3

**Answer: C**

Explanation:

Two cases are left when this decision table is collapsed. A decision table is a technique that shows the combinations of conditions and actions for a given scenario. A decision table that is collapsed eliminates the combinations that are invalid or impossible, such as having a scholarship without meeting the qualifications.

The two valid cases for this scenario are:

\* C1 = Y, C2 = Y, C3 = Y, A1 = Y, A2 = Y

\* C1 = Y, C2 = Y, C3 = N, A1 = Y, A2 = N

### NEW QUESTION # 32

Which of the following software development lifecycle models requires the earliest involvement from the Test Analyst?

- A. Embedded iterative model
- B. V-model
- C. Maintenance lifecycle
- **D. Agile development model**

**Answer: D**

Explanation:

The agile development model requires the earliest involvement from the Test Analyst because testing is integrated into every iteration and the Test Analyst needs to collaborate closely with the developers and the business stakeholders throughout the project. The other models have more distinct phases and testing activities are usually performed after the development activities are completed.

### NEW QUESTION # 33

You are testing an ATM based on the following use

ATM start screen is showing

1. The user inserts card
2. The user types in PIN
- 3 The user selects cash with receipt'
4. The user selects €50
5. The user selects no further service' Expected results

- The ATM provides €50 to the user
- The ATM returns the card and balance slip
- The ATM clears the screen
- The ATM returns to start menu

You are asked to review this use case.

You are asked to review this use case.

What is the most important information that is missing from this use case?

- **A. The use case should also include alternative behaviour.**
- B. Nothing has been defined for expected response times.
- C. More test cases are needed to achieve the minimum acceptable level of coverage.
- D. Expected results not clearly defined

**Answer: A**

Explanation:

The most important information that is missing from this use case is the alternative behaviour, which describes the exceptional or error flows of events that may occur during the execution of the use case. For example, the use case should specify what happens if the user enters an invalid PIN, if the ATM runs out of cash, if the user cancels the transaction, etc. The alternative behaviour is essential to test the robustness and reliability of the system under test. #### NEW QUESTION # 34

To enhance both the effectiveness and efficiency of the test design phase, the purchase of a test design tool is being considered. Which one of these statements best characterizes a test design tool?

- A. A test design tool validates models of the software.
- **B. A test design tool generates test inputs from requirements**
- C. A test design tool enables tests to be executed automatic ally.
- D. A test design tool enables individual tests to be traced to requirements

**Answer: B**

Explanation:

The statement that best characterizes a test design tool is that a test design tool generates test inputs from requirements. A test design tool is a tool that supports the test design activity by generating test inputs or test cases from a specified source, such as requirements, models, or code. A test design tool can use various techniques, such as equivalence partitioning, boundary value analysis, decision tables, state transition diagrams, etc., to generate test inputs or test cases. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 6.2.1, page 77.

#### NEW QUESTION # 35

Although usability is an important aspect for a new planning system, due to availability constraints, the usability evaluation shall be performed without Which of the following is a usability technique that can be applied in this situation?

- A. Usability prototyping
- B. Usability survey
- **C. Usability review, e.g., heuristic evaluation**
- D. Usability lab sessions

**Answer: C**

Explanation:

The usability technique that can be applied in this situation is usability review, e.g., heuristic evaluation.

Usability review is a technique that evaluates the usability of a system or component based on a set of criteria or guidelines, such as heuristics, standards, or checklists. Usability review can be performed without users, as it relies on the expertise and judgment of the reviewers. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 5.2.1, page 63.

#### NEW QUESTION # 36
