

Real And Valid CISM Exam Questions & Answers

CISM EXAM QUESTIONS AND ANSWERS 100% CORRECT

What would be the BEST security measure we could use to prevent data disclosure and data exfiltration?

- A) User authentication in all applications.
- B) Use very strong encryption.
- C) Use very strong key storage.
- D) Use very complex firewall rules. - ANSWER-C) Use very strong key storage.

Explanation

We would want a very strong key storage, if the attackers can get to our encryption keys, most of the other security measures are irrelevant. Most encryption today is strong enough to not be breakable with current technologies, making it stronger does often not make it significantly more secure. Complex firewall rules do not mean more secure, and in this example is a distractor. We would want user authentication in all applications, but not relevant for this question.

What is the MOST important reason we have Information Security review our contracts throughout the enterprise?

- A) To ensure that both parties can perform their contractual promises.
- B) To ensure the right to audit is a requirement.
- C) To ensure appropriate controls are included.
- D) To ensure no confidential information is included in the contract. - ANSWER-C) To ensure appropriate controls are included.

As an IT auditor, Trisha is conducting a compliance review. Which of these is she MOST likely to be performing?

- A) Performing job activity analysis
- B) Performing program activity analysis
- C) Performing system aging analysis

ISACA CISM Exam Preparation & CISM Reliable Test Simulator

Our CISM practice exams lower the likelihood of failing and are optimal for self-evaluation. You can access the web-based Certified Information Security Manager (CISM) practice exam online without having to install any software. All browsers and operating systems support our web-based CISM Practice Test. Every Windows computer supports our desktop ISACA CISM practice exam software, enabling you to prepare for the CISM test without an active internet connection. You can customize the time and types of these ISACA Questions.

The CISM exam consists of 150 multiple-choice questions that must be completed within a four-hour time limit. The questions are designed to test the candidate's knowledge and understanding of information security concepts, as well as their ability to apply this knowledge to real-world scenarios. CISM exam is computer-based and is administered at various testing centers around the world.

The CISM certification exam consists of 150 multiple-choice questions that must be completed within four hours. CISM Exam covers four domains: Information Security Governance, Risk Management and Compliance, Information Security Program Development and Management, and Information Security Incident Management. CISM exam is designed to test the candidate's knowledge and understanding of these domains, as well as their ability to apply this knowledge to real-world situations.

ISACA Certified Information Security Manager Sample Questions (Q1142-Q1147):

NEW QUESTION # 1142

Which of the following models provides a client organization with the MOST administrative control over a cloud-hosted environment?

- A. Platform as a Service (PaaS)
- B. Storage as a Service (SaaS)
- C. Software as a Service (SaaS)
- **D. Infrastructure as a Service (IaaS)**

Answer: D

Explanation:

Section: INFORMATION SECURITY PROGRAM MANAGEMENT

NEW QUESTION # 1143

Simple Network Management Protocol v2 (SNMP v2) is used frequently to monitor networks. Which of the following vulnerabilities does it always introduce?

- **A. Clear text authentication**
- B. Cross site scripting
- C. Remote buffer overflow
- D. Man-in-the-middle attack

Answer: A

Explanation:

Section: INFORMATION SECURITY PROGRAM MANAGEMENT

Explanation:

One of the main problems with using SNMP v1 and v2 is the clear text "community string" that it uses to authenticate. It is easy to sniff and reuse. Most times, the SNMP community string is shared throughout the organization's servers and routers, making this authentication problem a serious threat to security. There have been some isolated cases of remote buffer overflows against SNMP daemons, but generally that is not a problem. Cross site scripting is a web application vulnerability that is not related to SNMP. A man-in-the-middle attack against a user datagram protocol (UDP) makes no sense since there is no active session; every request has the community string and is answered independently.

NEW QUESTION # 1144

Which of the following BEST enables an organization to determine what activities and changes have occurred on a system during a cybersecurity incident?

- **A. Computer forensics**
- B. Continuous log monitoring
- C. Root cause analysis
- D. Penetration testing

Answer: A

Explanation:

Computer forensics involves analyzing systems to reconstruct activities and identify what changes or breaches have occurred. It provides a detailed understanding of the sequence of events during an incident.

"Computer forensics provides a detailed, legally defensible analysis of system activities to reconstruct the incident and identify root causes."

- CISM Review Manual 15th Edition, Chapter 4: Incident Management, Section: Forensics and Investigations* ISACA practice questions note that computer forensics is key for reconstructing incident activities.

NEW QUESTION # 1145

Which of the following should be of MOST concern to an information security manager reviewing an organization's data classification program?

- A. The program allows exceptions to be granted.
- B. Data retention requirements are not defined.
- C. Labeling is not consistent throughout the organization.
- D. The classifications do not follow industry best practices.

Answer: C

NEW QUESTION # 1146

An outcome of effective security governance is:

- A. strategic alignment.
- B. planning.
- C. risk assessment.
- D. business dependency assessment

Answer: A

Explanation:

Explanation

Business dependency assessment is a process of determining the dependency of a business on certain information resources. It is not an outcome or a product of effective security management. Strategic alignment is an outcome of effective security governance.

Where there is good governance, there is likely to be strategic alignment. Risk assessment is not an outcome of effective security governance; it is a process. Planning comes at the beginning of effective security governance, and is not an outcome but a process.

NEW QUESTION # 1147

.....

Owing to the industrious dedication of our experts and other working staff, our CISM study materials grow to be more mature and are able to fight against any difficulties. Our CISM preparation exam have achieved high pass rate in the industry, and we always maintain a 99% pass rate with our endless efforts. We have to admit that behind such a starling figure, there embrace mass investments on our CISM Exam Questions from our company.
