Citrix Virtual Apps and Desktops Administration Sample Questions (Q62-Q67):

NEW QUESTION # 62

After creating a new machine catalog using the Machine Creation Services (MCS) wizard in Citrix Studio, a Citrix Administrator determines that Windows activation fails for all new machines in that catalog.

Which two conditions can cause this to happen? (Choose two.)

- A. The version of Windows installed is Windows Server 2012 R2.
- B. The Microsoft License Server is unreachable.
- C. The base image rearm count has been exceeded.
- D. The version of Windows installed uses Multiple Activation Key (MAK) licensing.

Answer: C,D

Explanation:

Rearm count exceeded: If the base image has been sysprepped too many times, the rearm count may be exhausted, preventing Windows activation on cloned machines.

MAK licensing: MCS-provisioned machines are treated as newly deployed instances. MAK licensing is not suitable for this scenario because each clone would require its own activation, leading to failures.

NEW QUESTION # 63

A Virtual Delivery Agent (VDA) is unable to register with the Delivery Controller.

Which three factors could be causing this issue? (Choose three.)

- A. Improperly configured firewalls
- B. Incorrectly configured Citrix policy in Active Directory
- C. Incorrectly configured reverse DNS lookups in a forest
- D. Citrix ICA service NOT running
- E. Time differences between VDA-enabled machines and the Domain Controller

Answer: A,D,E

Explanation:

Improperly configured firewalls can block communication between the VDA and Delivery Controller.

Time differences greater than 5 minutes between the VDA and Domain Controller can prevent Kerberos authentication, leading to registration failure.

The Citrix ICA service (BrokerAgent) must be running for the VDA to register; if stopped, registration will fail.

NEW QUESTION # 64

Which Citrix Director view will allow a Citrix Administrator to view data on the current CPU, as well as memory and disk latency for a machine running the Virtual Delivery Agent (VDA)?

- A. Machine Utilization
- B. Resource Utilization
- C. Load Evaluator Index
- D. Capacity Management

Answer: B

Explanation:

The Resource Utilization view in Citrix Director provides real-time data on CPU, memory usage, and disk latency for VDA machines. This allows administrators to monitor system performance and identify resource bottlenecks affecting user sessions.

NEW QUESTION # 65

Which command must a Citrix Administrator run on the Citrix Director machine to integrate the NetScaler Console appliance with Citrix Director?

- A. DirectorConfig.exe /configscom
- B. Set-LogSite
- C. Set-MonitorConfiguration

- **D. DirectorConfig.exe /confignetscaler**

Answer: D

Explanation:

To integrate the NetScaler (Citrix ADC) Console with Citrix Director, the administrator must run the command DirectorConfig.exe /confignetscaler on the Director machine. This enables Director to display NetScaler Gateway and HDX Insight data.

NEW QUESTION # 66

By default, what is the printing behavior when no printing policy is configured?

- A. Direct connections to print servers are prohibited.
- B. The Universal Print Server is enabled.
- **C. All client printers are auto-created.**
- D. The generic universal printer is automatically created.

Answer: C
