Our F5CAB4 practice materials are your optimum choices which contain essential know-hows for your information. If you really want to get the certificate successfully, only F5CAB4 practice materials with intrinsic contents can offer help they are preeminent materials can satisfy your both needs of studying or passing with efficiency. You may strand on some issues at sometimes, all confusions will be answered by their bountiful contents. Wrong choices may engender wrong feed-backs, we are sure you will come a long way by our F5CAB4 practice material.

F5 F5CAB4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Identify configured system services: This domain covers verifying proper configuration of essential services including DNS, NTP, SNMP, and syslog.
Topic 2	<ul style="list-style-type: none"> Given a scenario, interpret Service status: This section teaches interpreting service states, analyzing netstat output, and determining whether services are listening on specific ports.
Topic 3	<ul style="list-style-type: none"> Identify management connectivity configurations: This section focuses on understanding management access configurations, including management IP addresses, port lockdown settings, remote connectivity verification, and troubleshooting access issues.
Topic 4	<ul style="list-style-type: none"> Apply procedural concepts required to create, manage, and restore a UCS archive: This domain covers UCS backup and restore procedures, understanding backup use cases, proper storage practices, and UCS file contents including private keys.
Topic 5	<ul style="list-style-type: none"> Given a scenario, determine device upgrade eligibility: This domain covers determining appropriate timing for software and platform upgrades and strategies to minimize downtime during upgrades.

Topic 6	<ul style="list-style-type: none"> • List which log files could be used to find events and • or hardware issues: This section teaches identification of key log files (• var • log • ltm, secure, audit), understanding event severity levels, and interpreting log messages.
Topic 7	<ul style="list-style-type: none"> • Explain config sync: This section focuses on configuration synchronization procedures, identifying sync errors, determining sync necessity, checking sync status, and comparing configuration timestamps.
Topic 8	<ul style="list-style-type: none"> • Explain authentication methods: This section focuses on user management including creating • modifying users, configuring remote authentication providers, and implementing group-based access control.
Topic 9	<ul style="list-style-type: none"> • Apply procedural concepts required to manage the state of a high availability pair: This domain covers controlling and monitoring failover states in high availability pairs, including forcing standby • offline modes, reporting failover status, and verifying device trust.

Free PDF Quiz F5 - Efficient F5CAB4 - BIG-IP Administration Control Plane Administration Reliable Test Materials

It may be a contradiction of the problem, we hope to be able to spend less time and energy to take into account the test F5CAB4 certification, but the qualification examination of the learning process is very wasted energy, so how to achieve the balance? The F5CAB4 Exam Prep can help you make it. With the high-effective F5CAB4 exam questions, we can claim that you can attend the exam and pass it after you focus on them for 20 to 30 hours.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q12-Q17):

NEW QUESTION # 12

When looking at this BIG-IP prompt: root@virtual-bigip1] Peer Time Out of Sync What does the message indicate? (Choose one answer)

- **A. That there was a time synchronization issue between the BIG-IP device and its peer**
- B. That the local time is correct, but the remote time is incorrect
- C. That the peer BIG-IP is unreachable for the device group
- D. That one of the NTP sources has a skewed clock

Answer: A

Explanation:

On BIG-IP systems that participate in a Device Service Cluster (DSC), each device compares the remote device's system time to its own system time. If the difference is outside the ConfigSync time threshold (commonly referenced as 3 seconds by default), BIG-IP updates the shell prompt to show "Peer Time Out of Sync", and ConfigSync operations may fail until time is corrected (typically by fixing NTP reachability

/configuration, or in some cases adjusting the threshold). (cdn.studio.f5.com) This message is specifically about time drift between peers in the trust domain/DSC-not basic reachability (so B is not what it means), and it does not prove which side is "correct" (so C is too specific). It also doesn't directly mean an NTP source is "skewed" (A can be a cause, but the prompt message itself indicates the peer- to-peer time mismatch condition). (cdn.studio.f5.com)

NEW QUESTION # 13

Which TMSH command initiates a manual configuration synchronization to the specified device group? (Choose one answer)

- A. tmsh modify sys failover auto-sync enable
- B. tmsh load sys config to-group <device_group>
- C. tmsh run sys device-group update-config
- D. tmsh run cm config-sync to-group <device_group>

Answer: D

Explanation:

In a BIG-IP Device Service Cluster (DSC), manual configuration synchronization is performed using the ConfigSync framework. The supported and documented command to manually push the local configuration to a specific device group is:

tmsh run cm config-sync to-group <device_group>

This command:

- * Initiates a one-time manual ConfigSync
- * Pushes the local device's configuration to all members of the specified device group
- * Is commonly used when auto-sync is disabled or when the administrator wants explicit control over synchronization timing Why the other options are incorrect:
- * A is not a valid TMSH command for ConfigSync.
- * B enables auto-sync but does not perform an immediate synchronization.
- * D is not a valid or supported TMSH command for device group configuration synchronization.

Therefore, the correct command to manually synchronize configuration to a device group is C.

NEW QUESTION # 14

New Syslog servers have been deployed in an organization. The BIG-IP Administrator must reconfigure the BIG-IP system to send log messages to these servers. In which location in the Configuration Utility can the BIG-IP Administrator make the needed configuration changes to accomplish this?

- A. System > Configuration > Device3
- B. System > Configuration > Local Traffic
- C. System > Logs > Configuration
- D. System > Logs > Audit2

Answer: C

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Managing how a BIG-IP communicates with external management services like Syslog is a core Control Plane task. The Configuration Utility organizes these settings under the "System" menu. Specifically, to define remote logging destinations and formats, the administrator must navigate to System > Logs > Configuration to ensure the Control Plane correctly forwards system events to external collectors

NEW QUESTION # 15

Refer to the exhibit.

The BIG-IP Administrator is investigating disk utilization on the BIG-IP device. What should the BIG-IP Administrator check next? (Choose one answer)

- A. Large files on /usr file system
- B. Results from the platform diagnostics test
- C. Results from the EUD test
- D. Large files on the / file system

Answer: D

Explanation:

When troubleshooting a BIG-IP system where a partition is reported as full (100% utilization), identifying and removing large or unnecessary files is the immediate next step for restoration of system stability.

- * Symptoms of Full Partitions: If a file system (such as the root / or /var) becomes full, it can result in unpredictable system behavior, failure to save configurations, and the inability to log in to the Web UI.
- * The Root (/) Partition: This partition is intentionally kept small on F5 systems. It is highly sensitive to the storage of third-party software or diagnostic files that should ideally be stored in the /shared or /var directories.
- * Procedural Resolution: To resolve 100% disk usage, administrators should check for large files on the affected partition using CLI

commands like `du -ah` or `find / -xdev -type f -exec du {} \; | sort -rn | head -20`.

* Common Culprits: Large files typically causing these issues include old core files, tech support bundles, large diagnostic logs (packet diags), or temporary files created during administrative tasks.

* Diagnostics vs. Remediation: While tests like the EUD (End User Diagnostics) or platform diagnostics are useful for hardware verification, they do not resolve file system exhaustion issues that have already reached a critical 100% state.

NEW QUESTION # 16

A BIG-IP Administrator discovers malicious brute-force attempts to access the BIG-IP device on the management interface via SSH. The BIG-IP Administrator needs to restrict SSH access to the management interface. Where should this be accomplished?

- A. Network > Self IPs
- B. System > Configuration
- C. Network > Interfaces
- **D. System > Platform**

Answer: D

Explanation:

The "Management Port" is distinct from TMM data ports. Configuration for global platform-level settings, including administrative access restrictions (IP Allow lists for SSH and HTTPS) for the management port, is found under System > Platform. This is a critical Control Plane hardening step to prevent unauthorized remote access. Here is the next batch of 10 questions from your document that are 100% related to BIG-IP

NEW QUESTION # 17

.....

Thus, we come forward to assist them in cracking the F5 F5CAB4 examination. Don't postpone purchasing F5 F5CAB4 exam dumps to pass the crucial examination. Real4test study material is available in three versions: F5 F5CAB4 Pdf Dumps, desktop practice exam software, and a web-based F5 F5CAB4 practice test.

F5CAB4 Pass Guarantee: https://www.real4test.com/F5CAB4_real-exam.html
