Pass Guaranteed 2026 Useful Oracle 1z0-076: Oracle Database 19c: Data Guard Administration Exam Dumps Provider

What's more, part of that TestSimulate 1z0-076 dumps now are free: https://drive.google.com/open?id=1jjlzkExOenMTYDDZx7SsNv-qioH9L2dL

If you are very busy, you can only take two or three hours a day to study our 1z0-076 study engine. Then I tell you this is enough! After ten days you can go to the exam. With such an efficient product, you really can't find the second one! In any case, many people have passed the exam after using 1z0-076 Training Materials. This is a fact that you must see. As long as you are still a sensible person, you will definitely choose 1z0-076 practice quiz. Don't hesitate! Time does not wait!

Our product is of high quality and boosts high passing rate and hit rate. Our passing rate is 98%-100% and our 1z0-076 test prep can guarantee that you can pass the exam easily and successfully. Our 1z0-076 exam materials are highly efficient and useful and can help you pass the exam in a short time and save your time and energy. It is worthy for you to buy our 1z0-076 Quiz torrent and you can trust our product. You needn't worry that our product can't help you pass the exam and waste your money. We guarantee to you our 1z0-076 exam materials can help you and you will have an extremely high possibility to pass the exam.

1z0-076 Most Reliable Questions & Exam 1z0-076 Quizzes

SWREG payment costs more tax. Especially for part of countries, intellectual property taxation will be collected by your countries if you use SWREG payment for 1z0-076 exam test engine. So if you want to save money, please choose PayPal. Here choosing PayPal doesn't need to have a PayPal. In fact here you should have credit card. If you click PayPal payment, it will automatically transfer to credit card payment for 1z0-076 Exam Test engine. On the other hands, PayPal have strict restriction for sellers account to keep buyers' benefits, so that you can share worry-free purchasing for 1z0-076 exam test engine.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.

Topic 2	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 3	• Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 4	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 5	• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 6	• Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 7	• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 10	• Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.

Oracle Database 19c: Data Guard Administration Sample Questions (Q100-Q105):

NEW QUESTION # 100
Which two statements are true regarding asynchronous redo transport in a Data Guard

- A. The performance of SQL apply on a logical standby database always improves when using this transport mode.
- B. This transport mode satisfies the minimum requirements for Maximum Availability data protection mode.
- C. A transaction can commit without waiting for redo to be sent to any standby database in the data guard configuration.
- D. Real-time query performance on a physical standby database improves for current read requests when using this transport mode.
- E. This transport mode satisfies the minimum requirements for Maximum Performance data protection mode.

Answer: C,E

Explanation:
Asynchronous redo transport is a method where the primary database does not wait for an acknowledgment from the standby database before committing transactions, which helps in minimizing the impact on the primary database's performance (B). This transport mode is associated with the Maximum Performance data protection mode, which prioritizes performance over synchronicity of data between the primary and standby databases (C). While it provides a level of data protection, there could be some data loss in the event of a primary database failure because redo data may not have been transmitted to the standby database at the time of the failure.
Reference:
Oracle Data Guard Concepts and Administration documentation provides detailed explanations of different redo transport modes and their implications on data protection and performance. Asynchronous transport mode's behavior and association with Maximum Performance mode are outlined explicitly.

NEW QUESTION # 101
Which two factors can cause an increase in redo transport lag?

- A. The size of the online redo log files on the standby database.
- B. Increase in redo generation rate on the primary database.
- C. The size of the standby redo log files on the primary database.

- D. Increase in network latency between the primary database and a redo transport destination.
- E. The size of the online redo log files on the primary database.

Answer: B,D

NEW QUESTION # 102
Which TWO observations are true about the Far Sync instance?

- A. Can be created using the RMAN DUPLICATE command
- B. Includes a standby control file, password file, data files, standby redo logs, and archive logs
- C. Can only be created using a series of SQL commands
- D. Receives redo synchronously from the primary database
- E. Applies redo received

Answer: D,E

Explanation:
A Far Sync instance is a special kind of Oracle Data Guard configuration that allows synchronous redo transport from a primary database to a remote standby database with minimum impact on the primary database's performance. The Far Sync instance receives redo data synchronously from the primary database (A), then ships it asynchronously to the remote standby database, thus extending zero data loss protection over longer distances and higher network latency environments than would be practical with a synchronous standby alone. The Far Sync instance does not apply the redo data; it just receives and ships it (E). A Far Sync instance does not have data files, and it cannot apply redo to stay synchronized with the primary database.
References:Oracle Database High Availability Overview and Oracle Data Guard Concepts and Administration documentation detail the role and configuration of Far Sync instances, including how they contribute to achieving zero data loss disaster recovery over long distances.

NEW QUESTION # 103
Examine the following parameter settings of the physical standby database:
* STANDBY_FILE_MANAGEMENT=AUTO
* ENABLED_PDBS_ON_STANDBY=<null>
During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Performing transportable tablespaces
- B. Renaming a data file in the primary database
- C. Creating a PDB from the existing PDB within the same CDB
- D. Adding or dropping a redo file group
- E. Adding a data file or creating a tablespace

Answer: C,E

Explanation:
When STANDBY_FILE_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:
* Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.
* Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB.References:
* Oracle Data Guard Concepts and Administration Guide

NEW QUESTION # 104
Which two steps must be performed before running DUPLICATE TARGET DATABASE FOR STANDBY using RMAN?

- A. Configure Oracle Net connectivity between the primary host and the standby host.
- B. Run the nid utility to modify the DBID of the primary database.

- C. Create an SPFILE for the standby database.
- D. Transfer a copy of the password file from the primary host to the standby host.
- E. Create a standby control file.

Answer: A,D

NEW QUESTION # 105
......

Our 1z0-076 guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated according to the change of the syllabus and the latest development conditions in the theory and the practice. The 1z0-076 exam questions have simplified the sophisticated notions. The software boosts varied self-learning and self-assessment functions to check the learning results. The software of our 1z0-076 Test Torrent provides the statistics report function and help the students find the weak links and deal with them.
