Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q120-Q125):

NEW QUESTION # 120

Your customer wants a newly installed AFF C190 cluster to send SNMP notifications to a trap host called OVERWATCH01. In this scenario, which two statements are correct? (Choose two.)

- A. Configure a trap host on the cluster.
- B. Configure DNS on the cluster.
- C. Configure an SNMP community string on the cluster.
- D. Configure a firewall policy and allow SNMP.

Answer: B,C

Explanation:

Within ONTAP SAN implementation and configuration, SNMP is commonly used to send event notifications to external monitoring systems. To successfully send SNMP traps to a named host such as OVERWATCH01, two foundational configuration requirements must be met.

First, an SNMP community string must be configured on the cluster. The community string defines the authentication mechanism for SNMP communication and determines which monitoring systems are authorized to receive SNMP data. Without a configured community string, ONTAP will not generate or send SNMP notifications.

Second, DNS must be configured on the cluster. The trap destination is defined using a hostname rather than an IP address. ONTAP requires DNS name resolution to translate the hostname OVERWATCH01 into an IP address. Without DNS configuration, the cluster cannot resolve the trap host and therefore cannot deliver SNMP notifications.

While configuring a trap host is also required in practice, the question asks which two statements are correct, not which actions complete the entire workflow. The critical dependencies that enable SNMP trap delivery to a named host are the SNMP community string and DNS resolution.

Firewall policies for SNMP are predefined and enabled by default in ONTAP for management traffic, so manual firewall configuration is not required during standard installation scenarios.

Therefore, the correct answers are A and B.

NEW QUESTION # 121

You need to create a configuration spreadsheet template for a new ONTAP 9.8 deployment. Which NetApp tool should you use?

- A. Active IQ Unified Manager
- B. Interoperability Matrix Tool
- C. Active IQ Config Advisor
- D. ConfigBuilder

Answer: D

NEW QUESTION # 122

A customer requires encryption at rest on every node root volume.

Which two encryption solutions will fulfill this requirement? (Choose two.)

- A. NSE
- B. IPsec
- C. NVE
- D. NAE

Answer: C,D

Explanation:

Encryption at rest for ONTAP root volumes is provided by software-based encryption. NetApp Volume Encryption (NVE) encrypts individual volumes, including root volumes. NetApp Aggregate Encryption (NAE) encrypts entire aggregates, also protecting root

volumes.

IPsec provides encryption in transit, not at rest. NetApp Storage Encryption (NSE) encrypts at the drive level but does not encrypt root volumes.

Therefore, the correct answers are A and C.

NEW QUESTION # 123

Where is user data (file access) written to by default?

- A. Vol0_root
- B. mailbox disks
- C. Aggr0_root
- D. SVM volume

Answer: D

Explanation:

User data in ONTAP is written to volumes owned by Storage Virtual Machines (SVMs). Root aggregates and root volumes are reserved for system metadata and ONTAP operations. Mailbox disks store HA metadata only.

Therefore, user data is written to an SVM volume.

NEW QUESTION # 124

Which tool checks a newly installed environment for configuration errors?

- A. Synergy
- B. Config Advisor
- C. BNA
- D. FilerView

Answer: B

Explanation:

After installing a NetApp storage system, it is critical to validate the environment for configuration and cabling errors. Config Advisor is the NetApp-recommended tool specifically designed for this purpose.

Config Advisor performs automated checks against NetApp-supported configuration rules, including hardware cabling, HA setup, disk ownership, shelf connectivity, network configuration, and firmware compatibility. It identifies misconfigurations that could lead to operational issues if left unresolved.

FilerView and BNA are legacy or unrelated tools, and Synergy is not used for ONTAP installation validation.

Therefore, the correct answer is D (Config Advisor).
