What sets Exam4Labs HPE Campus Access Switching Expert Written Exam (HPE7-A06) practice tests (desktop and web-based) apart are their unique features. The HPE7-A06 web-based practice exam is compatible with all operating systems and it can be taken on popular browsers like Chrome, Firefox, and Safari. The HP HPE7-A06 desktop practice exam software is compatible with Windows computers. After validating the product's license, you won't need an active internet connection to use the desktop HPE Campus Access Switching Expert Written Exam (HPE7-A06) practice test software.

Only by our HPE7-A06 practice guide you can get maximum reward not only the biggest change of passing the exam efficiently, but mastering useful knowledge of computer exam. So our practice materials are regarded as the great help. Rather than promoting our HPE7-A06 Actual Exam aggressively to exam candidates, we having been dedicated to finishing their perfection and shedding light on frequent-tested HPE7-A06 exam questions.

HPE7-A06 Test Book & HPE7-A06 Instant Discount

It is well acknowledged that people who have a chance to participate in the simulation for the real test, they must have a fantastic advantage over other people to get good grade in the exam. Now, it is so lucky for you to meet this opportunity once in a blue .We offer you the simulation test with the App version of our HPE7-A06 preparation test, in order to let you be familiar with the environment of test as soon as possible. Under the help of the real HPE7-A06 test simulation, you can have a good command of key

points which are more likely to be tested in the real test. Therefore that adds more confidence for you to make a full preparation of the upcoming HPE7-A06 Exam. In addition, since you can experience the process of HPE7-A06 the simulation test, you will feel less pressure about the approaching exam. It sounds wonderful, right? Of course, it is. So why not have a try? We promise you will enjoy this study.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q106-Q111):

NEW QUESTION # 106

A bgp routing table contains multiple routes to the same destination prefix. Referring to the table below, which route would be marked with a ">" symbol?

Route	MED	Origin Code	Local Preference
A	200	i	0
B	0	?	100
C	20	i	100
D	0	i	100

- A. B
- **B. D**
- C. C
- D. A

Answer: B

Explanation:

BGP path selection follows attributes in order. First, Local Preference is checked: routes B, C, and D all have 100 (better than route A with 0). Next, Origin Code is compared: "i" (IGP) is preferred over "?" (incomplete), so route B is less preferred. Between C and D, the MED is compared (lower is better). Route D has MED 0, route C has MED 20. Thus, Route D wins and is marked with ">".

NEW QUESTION # 107

A client would like to use the HPE Aruba Networking Switch MultiEdit Software function in HPE Aruba Networking Central. Which option is available?

- A. Run the same NAE scripts for selected switches.
- **B. Use CLI scripts and apply them to selected switches.**
- C. Use templates and apply them to selected switches.
- D. Apply a configuration to an interface range for selected switches.

Answer: B

Explanation:

The question involves a client wanting to use the HPE Aruba Networking Switch Multi-Edit Software function in HPE Aruba Networking Central to manage multiple switches. The task is to identify the available option.

* Analysis of Options:

* Option A (Use templates and apply them to selected switches): Incorrect. Templates are used for configuration management in Central but are not part of the Multi-Edit Software function.

* Option B (Apply a configuration to an interface range for selected switches): Incorrect. Multi-Edit focuses on CLI scripting, not specifically interface range configurations.

* Option C (Run the same NAE scripts for selected switches): Incorrect. Network Analytics Engine (NAE) scripts are for monitoring, not configuration via Multi-Edit.

* Option D: Correct. Multi-Edit Software in Central allows administrators to apply CLI scripts to multiple selected switches for configuration changes.

* Why Option D is Correct: HPE Aruba Networking Central's Multi-Edit Software feature enables administrators to create and apply CLI scripts to multiple AOS-CX switches simultaneously, streamlining configuration tasks. This is particularly useful for bulk changes, such as VLAN configurations or policy updates, across selected switches. The feature supports direct CLI input or script uploads, ensuring consistent application of commands, as per HPE Aruba Networking's management tools. This aligns with the client's need for efficient multi-switch management.

* Relevance to Certification Objectives:

* Connectivity (9%): Developing configurations for multiple devices based on customer requirements.

* Troubleshooting (10%): Applying consistent configurations to resolve network issues.

* Network Stack (4%): Analyzing solutions for network management automation.

NEW QUESTION # 108

With the configuration of two CX 8325 switches in the VSX cluster, how would you prepare a link- aggregation for a 7000 gateway for a zero-touch provision to support protocol-based port redundancy?

- A.

```
int lag 1
lacp mode on
lacp fallback
```
- B.

```
int lag 1 multi-chassis
lacp mode active
lacp fallback
```
- C.

```
int lag 1
lacp mode active
lacp fallback
```
- D.

```
int lag 1 multi-chassis
lacp mode on
lacp fallback
```

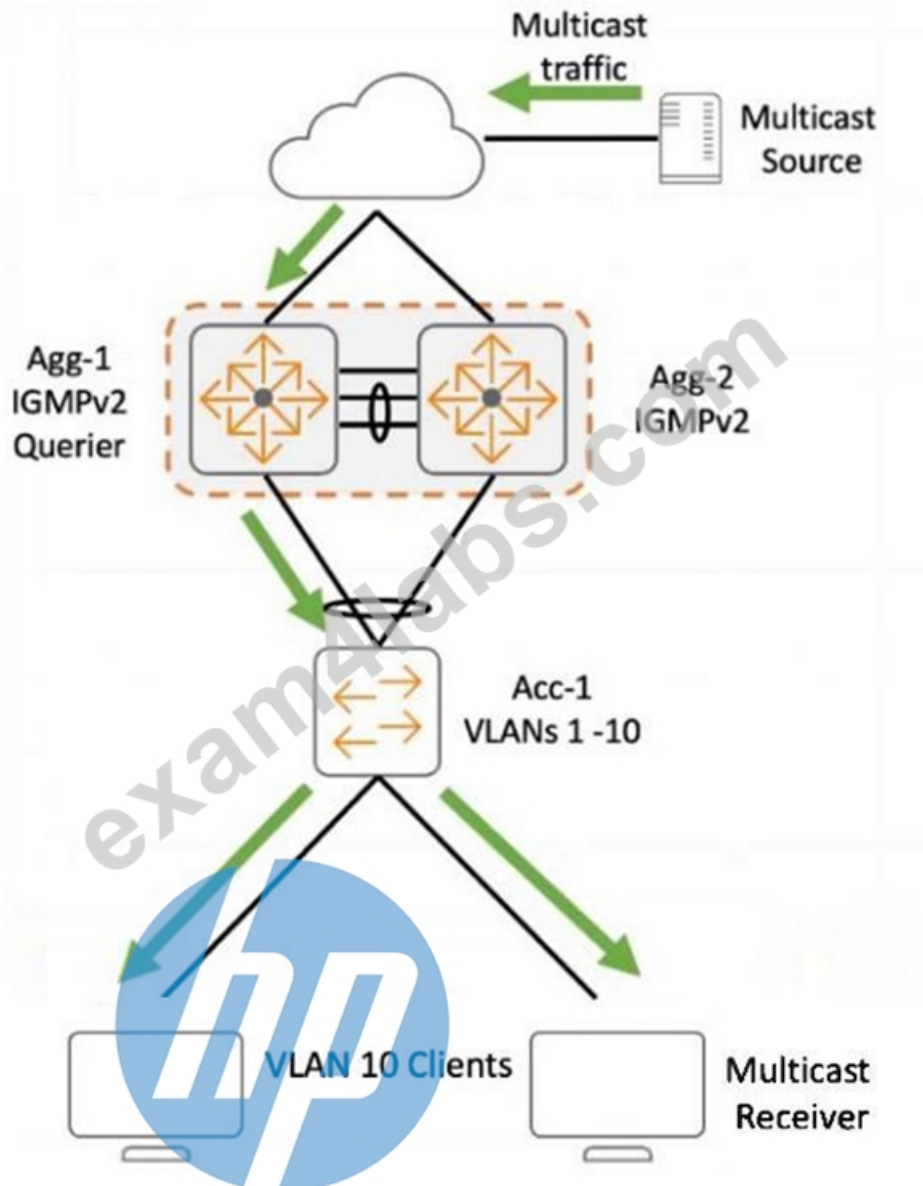

Answer: B

Explanation:

For a 7000 gateway ZTP with protocol-based port redundancy on a VSX pair, the LAG must be multi-chassis with LACP active; lacp fallback allows a single member to come up until the peer is discovered, ensuring connectivity during provisioning.

NEW QUESTION # 109

Refer to the exhibit.

During some implementation tests, you find that multicast traffic is being received on every client on the Acc-1 switch. What needs to be modified for multicast traffic to be forwarded appropriately?

- A. Enable IGMPv2 on Acc-1 switch.
- B. Configure PIM-DM on Agg-1 and Agg-2 switches.
- **C. Enable IGMP snooping on Acc-1 VLANs.**
- D. Replace IGMPv2 with IGMPv3 on Agg-1 and Agg-2 switches.

Answer: C

Explanation:

Since all clients on Acc-1 are receiving the multicast stream, the switch is flooding multicast traffic like broadcast. To forward multicast traffic only to interested receivers, IGMP snooping must be enabled on the VLANs of Acc-1. IGMP snooping listens to IGMP join/leave messages and builds per-VLAN multicast forwarding tables, ensuring only subscribed ports receive the multicast traffic.

NEW QUESTION # 110

An HPE Aruba Networking CX switch administrator wants to monitor all inter-switch connections and change their descriptions dynamically with Python script and NAE engine. The administrator has written the script template and uploaded it to the switch GUI. After the upload, not all data is stored as planned. Which things should be checked first? (Choose three.)

- A. script usage
- B. memory usage
- C. agent usage
- D. monitor usage
- E. flash memory usage
- F. processor usage

Answer: C,D,E

Explanation:

flash memory usage: The switch must have enough flash memory to store uploaded scripts and associated data.

agent usage: There is a limit to the number of active NAE agents; exceeding it can cause issues with storing or running new scripts.

monitor usage: There are limits on how many monitors (data collection points) can be active per switch or per agent; exceeding these can prevent data from being stored as planned.

NEW QUESTION # 111
