What's more, part of that Dumpleader JN0-351 dumps now are free: https://drive.google.com/open?id=1Q_w48yOMbAdkorAfNfYNIQBKmRRf_D

Our Dumpleader's JN0-351 exam training materials are mainly downloaded in PDF and software. We will regularly update, and will always provide the latest and the most accurate Juniper JN0-351 exam authentication information. With efforts for many years, the passing rate of our JN0-351 Exam has reached as high as 100%. If you have any concerns, you can try our JN0-351 pdf free demo and answers on probation first, and then make a decision whether to choose our JN0-351 dumps or not.

The Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) certification is the way to go in the modern Juniper era. Success in the JN0-351 exam of this certification plays an essential role in an individual's future growth. Nowadays, almost every tech aspirant is taking the test to get Juniper certification and find well-paying jobs or promotions. But the main issue that most of the candidates face is not finding updated Juniper JN0-351 Practice Questions to prepare successfully for the Juniper JN0-351 certification exam in a short time.

Valid JN0-351 Exam Cost - Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) - High-quality Practice JN0-351 Test Engine

The Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) exam dumps is released in three different formats. The formats are JN0-351 PDF dumps format, web-based practice exam, and desktop practice test software. The JN0-351 dumps

PDF is a printable format, meaning the user can print the real Juniper Certification Exams questions and carry them anywhere, anytime. It is also a portable format, meaning the Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) dumps PDF can be accessed on smartphones, tablets, and laptops.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q108-Q113):

NEW QUESTION # 108

Two routers share the same highest priority and start time. In this situation, what is evaluated next when determining the designated router?

- A. The routers perform another DR election.
- **B. The router with the highest router ID becomes the DR**
- C. The router with the highest MAC address become the DR
- D. The router with the lowest router ID become the DR.

Answer: B

Explanation:

According to the OSPF protocol, the designated router (DR) is the router that acts as the focal point for exchanging routing information on a multi-access network segment, such as a LAN. The DR election process is based on the following criteria, in order of precedence:

The router with the highest OSPF priority becomes the DR. The default priority is 1, and a priority of 0 means the router will not participate in the election.

If there is a tie in priority, the router with the highest router ID becomes the DR. The router ID is a 32-bit number that uniquely identifies a router in an OSPF domain. It can be manually configured or automatically derived from the highest IP address of a loopback interface or a physical interface. If there is a tie in router ID, the router that was first to become an OSPF neighbor becomes the DR. In your scenario, two routers share the same highest priority and start time.

This means that they have equal chances of becoming the DR based on the first and third criteria. Therefore, the second criterion will be used to break the tie, which is the router ID. The router with the highest router ID will become the DR, and the other router will become the backup designated router (BDR), which is ready to take over the role of DR if it fails.

NEW QUESTION # 109

Which two events cause a router to advertise a connected network to OSPF neighbors? (Choose two.)

- A. When a static route to the 224.0.0.6 address is created.
- **B. When a static route to the 224.0.0.5 address is created.**
- C. When an interface has the OSPF passive option enabled.
- **D. When an OSPF adjacency is established.**

Answer: B,D

Explanation:

A is correct because when an OSPF adjacency is established, a router will advertise a connected network to OSPF neighbors. An OSPF adjacency is a logical relationship between two routers that agree to exchange routing information using the OSPF protocol. To establish an OSPF adjacency, the routers must be in the same area, have compatible parameters, and exchange hello packets. Once an OSPF adjacency is formed, the routers will exchange database description (DBD) packets, which contain summaries of their link-state databases (LSDBs). The LSDBs include information about the connected networks and their costs. Therefore, when an OSPF adjacency is established, a router will advertise a connected network to OSPF neighbors through DBD packets. D is correct because when a static route to the 224.0.0.5 address is created, a router will advertise a connected network to OSPF neighbors. The 224.0.0.5 address is the multicast address for all OSPF routers. A static route to this address can be used to send OSPF hello packets to all OSPF neighbors on a network segment. This can be useful when the network segment does not support multicast or when the router does not have an IP address on the segment. When a static route to the 224.0.0.5 address is created, the router will send hello packets to this address and establish OSPF adjacencies with other routers on the segment. As explained above, once an OSPF adjacency is formed, the router will advertise a connected network to OSPF neighbors through DBD packets.

NEW QUESTION # 110

When trying to commit the configuration shown in the exhibit, you receive an error. What is the problem?

- A. You have not set the interface family correctly.
- **B. You have omitted the interface-mode trunkcommand.**
- C. You have not configured an IP address to the interface.
- D. You have omitted the interface-mode accesscommand.

Answer: B

NEW QUESTION # 111

Referring to the exhibit, which policy will export routes to IBGP peers?

- A. static-3
- B. static-1
- **C. static-4**
- D. static-2

Answer: C

NEW QUESTION # 112

Which OSPF packet type is sent when an OSPF router detects its database is stale?

- A. database description
- B. link-state acknowledgment
- C. hello
- **D. link-state request**

Answer: D

NEW QUESTION # 113

.....

Our experts are well-aware of the problems of exam candidates particularly of those who can't manage to spare time to study the JN0-351 exam questions due to their heavy work pressure. Hence, our JN0-351 study materials have been developed into a simple content and language for our worthy customers all over the world. What is more, you will find there are only the keypoints in our JN0-351 learning guide.

Practice JN0-351 Test Engine: https://www.dumpleader.com/JN0-351_exam.html

Juniper Valid JN0-351 Exam Cost We have multiple products that you can use to prepare the real exam, Contact us quickly, Juniper Valid JN0-351 Exam Cost Try to immerse yourself in new experience, Only ten days is enough to cover up the content and you will feel confident enough that you can answer all JN0-351 questions on the syllabus of JN0-351 certificate, By using our Juniper JN0-351 exam prep materials, candidates have gained manifest improvements and help you gain success in limited time and keep an optimistic mood during the process, even to some difficulties, our JN0-351 pass-sure braindumps materials can help you ascend the mountain of knowledge of the exam.

The Registry editor display lists values by their technical names, Just think JN0-351 about the kinds of games you'll be able to program once you dig deeper into Kodu, We have multiple products that you can use to prepare the real exam.
