

Latest CWISA-103 Exam Experience - CWISA-103 Dump Torrent

P.S. Free 2025 CWNP CWISA-103 dumps are available on Google Drive shared by TestPassed: <https://drive.google.com/open?id=1fVmqNMO-78PSS65s4fb2VLMlIS3Kwm>

To suit customers' needs of the CWISA-103 preparation quiz, we make our CWISA-103 exam materials with customer-oriented tenets. Famous brand in the market with combination of considerate services and high quality and high efficiency CWISA-103 study questions. Without poor after-sales services or long waiting for arrival of products, they can be obtained within 5 minutes with well-built after-sales services.

CWNP CWISA-103 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Radio Frequency Communications: This section of the exam measures the skills of RF Engineers and focuses on the fundamental principles of radio frequency communications. It involves explaining RF wave characteristics such as frequency, wavelength, and amplitude, and understanding behaviors like amplification, attenuation, and free space path loss. The domain covers describing modulation techniques including ASK, FSK, PSK, and QAM, and explaining the capabilities of RF components like radios, antennas, and cabling. It also includes describing the use and capabilities of different RF bands in terms of communication ranges and power levels.
Topic 2	<ul style="list-style-type: none">Wireless Technologies: This section of the exam measures the skills of Wireless Architects and covers foundational knowledge of wireless IoT technologies and their applications. It includes maintaining awareness of emerging technologies through research, understanding common applications and their associated frequencies and protocols, and familiarity with key standards organizations like IEEE, IETF, and Wi-Fi Alliance. The domain also encompasses defining various wireless network types including WLAN, WPAN, and IoT implementations across industries, along with understanding the hardware and software components of IoT devices and gateways, covering processors, memory, radios, sensors, and operating systems.
Topic 3	<ul style="list-style-type: none">Supporting Wireless Solutions: This section of the exam measures the skills of Wireless Support Engineers and focuses on the ongoing administration and support of wireless solutions across various vertical markets. It involves administering solutions in healthcare, industrial, smart cities, retail, and other environments while troubleshooting common problems including interference, configuration issues, and hardware malfunctions. The domain includes determining the best use of scripting and programming solutions for IoT implementations, understanding data structures and APIs, and comprehending networking and security protocols. It also covers understanding application architectures and their impact on wireless solutions, including single-tier and multi-tier architectures, database systems, and application servers.

Topic 4	<ul style="list-style-type: none"> • Implementing Wireless Solutions: This section of the exam measures the skills of Wireless Implementation Specialists and covers the practical implementation of wireless IoT solutions. It involves understanding key issues related to automation, integration, monitoring, and management, and using best practices in implementation, including pilot testing, configuration, installation, and documentation. The domain includes validating implementations through testing and troubleshooting, performing installation procedures including equipment mounting and connectivity configuration, and implementing security solutions covering authentication, authorization, and encryption. It also encompasses knowledge transfer practice, including staff training and solution documentation.
Topic 5	<ul style="list-style-type: none"> • Planning Wireless Solutions: This section of the exam measures the skills of IoT Solutions Architects and encompasses the planning phase of wireless IoT solutions. It involves identifying system requirements, including use cases, capacity needs, security requirements, and integration needs, while considering constraints such as budgetary, technical, and regulatory limitations. The domain includes selecting appropriate wireless solutions based on requirements, planning for technical needs, including LAN • WAN networking and frequency coordination, and understanding the capabilities of common wireless IoT solutions like Bluetooth, Zigbee, and LoRaWAN, along with location services and methods.

Rely on Real CWNP CWISA-103 Questions For Success

TestPassed guarantees its customers that they will pass the CWISA-103 exam on their first attempt. TestPassed guarantees that you will receive a refund if you fail the CWNP CWISA-103 Exam. For assistance with CWNP CWISA-103 exam preparation and practice, TestPassed offers its users three formats.

CWNP Certified Wireless IoT Solutions Administrator(2025 Edition) Sample Questions (Q76-Q81):

NEW QUESTION # 76

What organization maintains and publishes the 802.15.4 Standard?

- **A. IEEE**
- B. Bluetooth SIG
- C. IETF
- D. Zigbee Alliance

Answer: A

Explanation:

* IEEE 802.15.4: The IEEE 802.15.4 standard is a fundamental specification for low-rate wireless personal area networks (LR-WPANs). It serves as the basis for many wireless IoT protocols.

* IEEE's Role: The Institute of Electrical and Electronics Engineers (IEEE) is the organization responsible for creating, maintaining, and publishing the 802.15.4 standard.

References

* IEEE 802.15.4 Standard: https://standards.ieee.org/standard/802_15_4-2020.html

* IEEE Website: <https://www.ieee.org/>

NEW QUESTION # 77

You have been asked to locate an intermittent RF interference source. What tool will assist best in locating the generating device?

- A. Protocol analyzer
- **B. Spectrum analyzer**
- C. WinPCAP
- D. NMAP

Answer: B

Explanation:

* Visualizing RF Interference: Spectrum analyzers display radio frequencies across a range, showing signal strength and potential interference sources. This is crucial for identifying non-Wi-Fi devices that might be disrupting your wireless solution.

* Other Tools Have Limitations:

* NMAP: Network mapper, focused on discovering devices, not RF analysis

* WinPCAP: Packet capture software, helpful but doesn't directly display the RF spectrum

* Protocol Analyzer: Analyzes network traffic, but won't pinpoint physical layer interference.

References:

Spectrum Analyzers: How they work and common use cases in RF troubleshooting.

Wireless Interference Types: Resources that discuss non-Wi-Fi interference sources (microwaves, cordless phones, etc.)

NEW QUESTION # 78

What best describes a proof-of-concept implementation?

- A. A full-scale test deployment in the target environment for users to work with
- B. A demonstration provided by the manufacturer in their facility that shows the capabilities of the system
- **C. A limited-scope prototype deployment in the target environment to test and demonstrate capabilities in the real world**
- D. Testing for software bugs that might impact the end user

Answer: C

Explanation:

* Purpose of POC: A proof-of-concept (POC) validates the feasibility and potential value of a solution within its intended operational environment.

* Scaling: POCs are small-scale, allowing for quicker and less costly testing before committing to a full-scale deployment.

* Real-world Evaluation: Unlike manufacturer demos, a POC exposes the system to the unique variables (e.g., interference, usage patterns) present in the user's specific setting.

References:

IT project management: Materials discussing the role of proof-of-concept phases and their goals.

NEW QUESTION # 79

Which of the following is a characteristic of 802.15.4 networks such as Zigbee?

- **A. Mesh networking support**
- B. Very high throughput (hundreds of Mbps)
- C. Operation only on 5 GHz
- D. Extremely long range (tens of kilometers)

Answer: A

Explanation:

Zigbee supports mesh networking for extended coverage and reliability. It offers low throughput, typically operates at 2.4 GHz, and is not long-range.

NEW QUESTION # 80

What provides the security (encryption) in an HTTPS connection?

- A. SNMPv3
- **B. SSL/TLS**
- C. SSH
- D. IPSec

Answer: B

Explanation:

* SSL/TLS Secures Web Traffic: HTTPS builds upon HTTP, adding the encryption provided by Secure Sockets Layer (SSL) or its successor, Transport Layer Security (TLS).

* Other Protocols Have Different Purposes:

- * IPSec: Secures IP traffic at a network level, can be used alongside TLS.
- * SNMPv3: Management protocol, offers security features, but not the primary mechanism in HTTPS.
- * SSH: Secure remote shell, unrelated to web data encryption.

References:

TLS (and SSL): Explanations of their role in HTTPS and how they provide encryption for web communication.

HTTPS Overview: Materials showing how TLS fits into the overall HTTPS architecture.

NEW QUESTION # 81

.....

While attempting the exam, take heed of the clock ticking, so that you manage the CWNP CWISA-103 Questions in a time-efficient way. Even if you are completely sure of the correct answer to a question, first eliminate the incorrect ones, so that you may prevent blunders due to human error.
