ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q349-Q354):

NEW QUESTION # 349
A company runs a pilot project for evaluation of a test automation tool. Which of the following is NOT a valid object of this pilot project?

- A. Train all testers on using the tool
- B. Decide upon standards for tool implementation
- C. Get familiar with the functionality and options of the tool
- D. Check haw the tool fits to the existing test processes

Answer: A

Explanation:
A pilot project is a small-scale experiment or trial that is conducted to evaluate the feasibility, effectiveness, and suitability of a test automation tool before implementing it on a larger scale1.
The objectives of a pilot project may vary depending on the context and scope of the test automation initiative, but some common ones are2:
To get familiar with the functionality and options of the tool
To check how the tool fits to the existing test processes and environment To assess the benefits and challenges of using the tool To decide upon standards and guidelines for tool implementation and usage To estimate the costs and resources required for tool deployment and maintenance Therefore, option C is not a valid objective of a pilot project, as it is not necessary to train all testers on using the tool at this stage. Training all testers on using the tool would be more appropriate after the tool has been selected and approved for full-scale implementation, and after the standards and guidelines have been established. Training all testers on using the tool during the pilot project would be inefficient, costly, and premature, as the tool may not be suitable or effective for the intended purpose, or may be replaced by another tool later.

NEW QUESTION # 350
A possible risk of introducing test automation is:

- A. the tool may not be fit-for-purpose.
- B. the tool may not be compatible with the development platform.
- C. the tool will be owned and maintained by developers and replace testers.
- D. the tool may create additional development dependencies.

Answer: A

Explanation:
One possible risk of introducing test automation is that the selected tool may not be fit-for-purpose. This means that the tool might not meet the specific needs and requirements of the project, leading to inefficiencies and possibly failing to provide the expected benefits. It is crucial to evaluate and select the appropriate tool based on the project's context and objectives. The ISTQB CTFL syllabus highlights the importance of careful tool evaluation and selection to ensure it aligns with the testing goals and the development environment.

NEW QUESTION # 351

Which of the following is a CORRECT statement about how a tester should communicate about defects, test results, and other test information?

- A. Testers should include personal opinions and judgements in defect reports and review findings
- B. Testers should emphasize the benefits of testing, such as increased quality and reduced risk
- C. Testers should reject all questions about their test findings and information
- D. Testers should take a command-and-control approach with the project team

Answer: B

Explanation:
Communication from testers about defects, test results, and other test information should emphasize the benefits of testing such as increased quality and reduced risk. This positive framing helps in reinforcing the value of testing and ensuring stakeholders understand the contribution of testing to the overall project success (ISTQB not-for-profit association).References:

NEW QUESTION # 352

Which of the types of test tools noted below BEST describes tools that support reviews?

- A. Tools to support specialized testing needs
- B. Tools to assess data quality
- C. Tools to support usability testing
- D. Tools to support static testing

Answer: D

Explanation:
Static testing refers to testing that doesn't involve executing code. It includes activities like reviews, inspections, and static analysis. Tools that support static testing help with activities such as analyzing source code, checking coding standards, and aiding in document reviews. These tools can automate or facilitate various aspects of static testing processes, such as highlighting potential issues in code or documents without executing the software.References:

NEW QUESTION # 353

"Statement Testing" is part of;

- A. Decision Testing
- B. Experience based testing
- C. Specification Based testing
- D. Structured based testing

Answer: D

Explanation:
Statement Testing is a type of white-box testing technique where the test cases are designed based on the implementation of the software, specifically aiming to execute every statement in the code at least once. This falls under the category of structure-based testing (also known as white-box testing), where the internal structure of the system is used to design test cases. Therefore, option D is correct.

NEW QUESTION # 354

......

You will be able to experience the real exam scenario by practicing with ISTQB ISTQB-CTFL practice test questions. As a result, you should be able to pass your ISTQB ISTQB-CTFL Exam on the first try. ISTQB ISTQB-CTFL desktop software can be installed on Windows-based PCs only. There is no requirement for an active internet connection.

Our cultural pendulum has always swung to customers benefits, which explains why we provide you excellent ISTQB-CTFL exam study material with reasonable price and discounts, Our target is to make sure our customers can concentrate on their study (ISTQB-CTFL latest dumps) and work without other worries behind, In a word, our ISTQB-CTFL exam questions have built good reputation in the market.

When considered in context, this merger is only one aspect of a bigger ISTQB-CTFL plan: deciding who will control the wireless access market, dominate the Internet, and ultimately decide what you will see and hear.
