CompTIA A+ Certification Exam: Core 1 Sample Questions (Q188-Q193):

NEW QUESTION # 188

Which of the following will most likely be used in a testing environment to execute unauthorized or experimental code without affecting production systems?

- A. Load balancers
- B. Hybrid cloud
- C. Application gateways
- D. Virtual machines

Answer: D

Explanation:

CompTIA A+ strongly emphasizes that virtual machines (VMs) are ideal for testing potentially unsafe software, malware samples, or experimental code because they isolate the environment from the host system.

VMs allow snapshots, cloning, and rollback functionality, which makes them essential in development, QA, and cybersecurity environments where code might be unstable or harmful.

Hybrid cloud refers to infrastructure strategy, not code execution isolation. Load balancers distribute production traffic but have no testing or sandboxing purpose. Application gateways filter traffic but do not provide execution environments.

Virtual machines create a safe sandbox where failure, infection, or corruption is contained. This is covered in the Virtualization and Cloud Computing domain of the CompTIA A+ exam, making VMs the correct tool for executing unauthorized code safely.

NEW QUESTION # 189

A technician is unable to join a computer to the domain. The technician runs ipconfig and gets the following output:

Which of the following is the most likely cause?

- A. DNS servers are manually set.
- B. NetBIOS is enabled.
- C. The subnet mask is incorrect.
- D. DHCP is enabled.

Answer: A

Explanation:

Joining a domain requires the computer to use the organization's internal DNS so it can locate domain controllers and domain services. With public DNS servers configured, the computer cannot resolve the internal domain records needed to complete the domain join.

NEW QUESTION # 190

A user asks a technician for assistance with a printer that has stopped printing. The user states that the print jobs are generated from a website and are difficult to re-create. When the technician remotes into the user's computer, they can see many jobs in the queue. The issue persists after the user performs a hard reset of the printer. Which of the following will most likely fix the issue?

- A. Making sure the printer is using the latest PCL driver
- B. Restarting the print spooler service on the local computer
- C. Deleting all the jobs and having the user restart their computer
- D. Updating the manufacturer's firmware on the printer

Answer: B

Explanation:

Restarting the print spooler service clears and reloads the print queue on the user's PC, removing any hung jobs without needing to recreate or reprint them.

NEW QUESTION # 191

Which of the following types of connectors does an IDE hard drive use for power?

- A. Molex
- B. Lightning
- C. F type
- D. SC

Answer: A

Explanation:

An IDE hard drive uses a Molex connector for power. This 4-pin connector is a standard for older drives.

NEW QUESTION # 192

A technician installs an external camera on a user's laptop. When loading the company meeting software, the video preview shows a blank screen. Which of the following should the technician do next?

- A. Select the correct camera source.
- B. Replace the camera with a different model.
- C. Update the camera software to the latest version.
- D. Check the camera's cable for damage or pinches.

Answer: A

Explanation:

When an external camera is installed, conferencing software may default to a different video input. Selecting the correct camera source ensures the application uses the newly installed external camera, resolving the blank video preview.
