100% Pass 2026 D-ISM-FN-01: High Hit-Rate High Dell Information Storage and Management Foundations v2 Exam Passing Score

Our experts have great familiarity with D-ISM-FN-01 real exam in this area. With passing rate up to 98 to 100 percent, we promise the profession of them and infallibility of our D-ISM-FN-01 practice materials. So you won't be pestered with the difficulties of the

exam any more. What is more, our D-ISM-FN-01 Exam Dumps can realize your potentiality greatly. Unlike some irresponsible companies who churn out some D-ISM-FN-01 study guide, we are looking forward to cooperate fervently.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

Match each OSD (Object Storage Device) feature with its description:

Answer:

Explanation:

Explanation:

A screenshot of a computer AI-generated content may be incorrect.

#Flexible data access method: Object storage can offer multiple ways to access and interact with stored data, such as REST/SOAP APIs (for object-based access) and file-sharing protocols (CIFS, NFS) for file-level access.

#Metadata-driven policy: Object storage uses rich metadata to define how objects are placed, protected, and managed, driven by policies that respond to service-level requirements.

#Data protection: Object storage systems implement data protection at a global scale through replication or erasure coding to ensure data durability and availability.

#Global namespace: Object storage abstracts physical locations, providing a single namespace (a unified view) so that applications can seamlessly access data regardless of where it physically resides.

NEW QUESTION # 17

Question:

What is a read miss in cache operations?

- A. Fetching requested data that is already in cache
- B. Writing data to the cache
- C. Deleting data from the cache
- D. **Fetching data that is not in cache**

Answer: D

Explanation:

A read miss occurs when the data requested by the host is not available in the cache. As a result, the storage system must fetch the data from the slower disk storage (back-end), leading to higher latency.

* Cache hit: Data is already in cache # faster response.

* Cache miss (read miss): Data not in cache # fetched from the disk.

NEW QUESTION # 18

Question:

What is the main advantage of 5G technology over previous generations of mobile networks?

- A. Increased bandwidth
- B. **Increased speed and capacity**
- C. Reduced distance
- D. Lower cost

Answer: B

Explanation:

5G represents the fifth generation of mobile networks and offers several significant advantages over 4G, 3G, and earlier generations:

* Increased speed: 5G delivers data speeds up to 100 times faster than 4G LTE.

- * Enhanced capacity: Supports more devices per square kilometer, crucial for IoT and smart cities.
- * Low latency: Reduces delay in data transmission, enabling real-time applications like remote surgeries or autonomous vehicles.
- * Increased bandwidth (Option B) is part of the overall increased capacity.
- * Reduced distance (Option C) is incorrect; 5G uses shorter wavelengths, meaning shorter range.
- * Lower cost (Option D) is not a key advantage of 5G technology itself.

NEW QUESTION # 19

Question:

Which activity is performed in the fifth stage of penetration testing?

- A. Checking the compromised system or network
- B. Determining the risk levels by exploited vulnerabilities
- C. Collecting the evidence of the exploited vulnerabilities
- D. Determining if persistence access can be maintained

Answer: A

Explanation:

The fifth stage of penetration testing is known as post-exploitation or analysis of the compromised environment. It involves:

- * Checking the compromised system/network to determine the scope of access.
- * Identifying potential for further exploitation.
- * Gathering information about the environment.
- * Option A relates to the risk assessment phase.
- * Option B is typically done in post-exploitation but isn't the main step.
- * Option D (collecting evidence) is more related to reporting/documentation at the end.

NEW QUESTION # 20

Question:

What method does FCIP use to transport Fibre Channel SAN data?

- A. FCIP encapsulates and tunnels FC SAN data over IP networks.
- B. FCIP encapsulates and tunnels FC SAN data over Ethernet networks.
- C. FCIP separates LAN and FC SAN data and tunnels FC SAN data over IP networks.
- D. FCIP splits LAN and FC SAN data and tunnels FC SAN data over Ethernet networks.

Answer: A

Explanation:

FCIP (Fibre Channel over IP) is a protocol used to connect Fibre Channel SANs across geographically dispersed locations over IP networks. It does this by encapsulating Fibre Channel frames into IP packets (Layer 3). This allows FC SAN traffic to be transmitted across IP-based WANs.

- * Ethernet networks (Layer 2) are not involved in the FCIP encapsulation process directly because FCIP uses IP packets.
- * Splitting LAN/SAN data is not the method used; FCIP encapsulates all FC frames.
- * Separating LAN and SAN data also does not describe the tunneling function.
