Valid CompTIA Server+ Certification Exam test answers, valid SK0-005 exam dumps

Many candidates find the CompTIA Server+ Certification Exam (SK0-005) exam preparation difficult. They often buy expensive study courses to start their CompTIA Server+ Certification Exam (SK0-005) certification exam preparation. However, spending a huge amount on such resources is difficult for many CompTIA SK0-005 Exam applicants. The latest CompTIA SK0-005 exam dumps are the right option for you to prepare for the CompTIA Server+ Certification Exam (SK0-005) certification test at home.

CompTIA Server+ Certification Exam Sample Questions (Q135-Q140):

NEW QUESTION # 135
A USB drive has been purchased to move files between Windows, *nix, and Macintosh servers. Which of the following filesystems is the BEST choice to ensure the drive can read and be written to by all of the servers?

- A. NTFS
- B. FAT32
- C. UFS
- D. ext2

Answer: B

NEW QUESTION # 136

An administrator discovers a Bash script file has the following permissions set in octal notation;
777
Which of the following is the MOST appropriate command to ensure only the root user can modify and execute the script?

- A. chmod u+wx
- B. chmod go-rw>:
- C. chmod g-rwx
- D. chmod u=rwx

Answer: B

Explanation:
chmod is a command-line tool that changes the permissions of files and directories in Linux and Unix systems. chmod go-rwx means to remove read, write, and execute permissions for group and other users from a file or directory. This can ensure only the root user can modify and execute the script, since root user has full access to all files and directories regardless of their permissions.

NEW QUESTION # 137

A company is reviewing options for its current disaster recovery plan and potential changes to it. The security team will not allow customer data to egress to non-company equipment, and the company has requested recovery in the shortest possible time. Which of the following will BEST meet these goals?

- A. A cold site
- B. A hot site
- C. A warm site
- D. Cloud recovery

Answer: B

Explanation:
A hot site is a type of disaster recovery site that has all the equipment and data ready to resume operations as soon as possible after a disaster. A hot site is usually located in a different geographic area than the primary site and has redundant power, cooling, network, and security systems. A hot site is best for the company that wants to recover in the shortest possible time and does not want customer data to egress to non-company equipment. A warm site is a type of disaster recovery site that has some equipment and data ready, but requires some configuration and restoration before resuming operations. A cold site is a type of disaster recovery site that has only basic infrastructure and space available, but requires significant setup and installation before resuming operations. Cloud recovery is a type of disaster recovery service that uses cloud-based resources and platforms to store backups and restore data and applications after a disaster. References:

NEW QUESTION # 138

A new application server has been configured in the cloud to provide access to all clients within the network.
On-site users are able to access all resources, but remote users are reporting issues connecting to the new application. The server administrator verifies that all users are configured with the appropriate group memberships. Which of the following is MOST likely causing the issue?

- A. Group policies have not been applied.

- B. There are misconfigured firewall rules.
- C. Telnet connections are disabled on the server.
- D. Role-based access control is misconfigured.

Answer: B

Explanation:
Explanation
This is the most likely cause of the issue because firewall rules can block or allow traffic based on source, destination, port, protocol, or other criteria. If the firewall rules are not configured properly, they can prevent remote users from accessing the cloud application server, while allowing on-site users to access it.References:https://docs.microsoft.com/en-us/azure/virtual-network/security-overview

NEW QUESTION # 139
A company is building a new datacenter next to a busy parking lot. Which of the following is the BEST strategy to ensure wayward vehicle traffic does not interfere with datacenter operations?

- A. Install security cameras
- B. Utilize security guards
- C. Install bollards
- D. Install a mantrap

Answer: C

Explanation:
The best strategy to ensure wayward vehicle traffic does not interfere with datacenter operations is to install bollards. Bollards are sturdy posts that are installed around a perimeter to prevent vehicles from entering or crashing into a protected area. Bollards can provide physical security and deterrence for datacenters that are located near busy roads or parking lots. Bollards can also prevent accidental damage or injury caused by vehicles that lose control or have faulty brakes.

NEW QUESTION # 140
......

Desktop CompTIA Server+ Certification Exam (SK0-005) practice exam software also keeps track of the earlier attempted CompTIA Server+ Certification Exam (SK0-005) practice test so you can know mistakes and overcome them at each and every step.
