### CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q20-Q25):

#### NEW QUESTION # 20

A software engineer needs to transfer data over the internet using programmatic access while also being able to query the data. Which of the following will best help the engineer to complete this task?

- A. GraphQL
- B. SQL
- C. Web sockets
- D. RPC

**Answer: A**

Explanation:

GraphQL is the best option for transferring data over the internet with programmatic access and querying capabilities. It is a query language for APIs and a runtime for executing those queries with existing data, providing a more efficient, powerful, and flexible alternative to the REST API. References: Data transfer and querying methods are part of the technical knowledge associated with cloud computing, as included in CompTIA Cloud+.

#### NEW QUESTION # 21

A company has ten cloud engineers working on different manual cloud deployments. In the past, engineers have had difficulty keeping deployments consistent. Which of the following is the best method to address this issue?

- A. Service logging
- B. Deployment documentation
- C. Change ticketing
- D. Configuration as code

**Answer: D**

Explanation:

In CompTIA Cloud+ (CV0-004) objectives covering automation, orchestration, and configuration management, the best way to ensure consistent deployments across multiple engineers is to use configuration as code (often implemented as Infrastructure as Code and configuration management). By defining infrastructure and system configuration in version-controlled templates (e.g., Terraform, CloudFormation, ARM, Ansible), the organization replaces manual, error-prone steps with repeatable, standardized builds. This reduces configuration drift, enforces approved baselines, and enables peer review and automated testing through CI/CD pipelines. When changes are required, engineers update the code, validate it, and redeploy consistently across environments, improving reliability and auditability.

Deployment documentation (A) helps, but it still relies on humans to follow steps and tends to fall out of date.

Service logging (B) improves observability but does not prevent inconsistent builds. Change ticketing (D) supports governance and approval workflows, yet it doesn't guarantee technical consistency in implementation. Therefore, configuration as code is the most effective control to achieve consistent cloud deployments at scale.

#### NEW QUESTION # 22

A project manager is reviewing quality planning techniques. Which of the following involves comparing results of similar activities?

- A. Performing a cost-benefit analysis
- B. Defining metrics
- C. Benchmarking
- D. Brainstorming

**Answer: C**

Explanation:

Benchmarking is a quality technique that compares results, processes, or best practices from similar activities or organizations. It helps set realistic performance standards and identify improvement opportunities. Unlike cost-benefit analysis (financial), benchmarking focuses on performance comparison.

Reference: CompTIA Project+ PK0-005 - Quality Planning Techniques; CompTIA Cloud+ CV0-004 Operations & Support domain.

#### NEW QUESTION # 23

The change control board received a request to approve a configuration change to deploy in the cloud production environment. Which of the following should have already been completed?

- A. Cost benefit analysis
- B. Penetration test
- **C. User acceptance testing**
- D. End-to-end security testing

**Answer: C**

Explanation:

Before a configuration change is deployed in the cloud production environment, it is crucial to conduct User Acceptance Testing (UAT). UAT involves testing the system by the end-users or clients to ensure it can handle required tasks in real-world scenarios, according to specifications. This testing is the final stage before the change is approved for production, ensuring that all functionalities meet user requirements and the system is ready for deployment. References: The CompTIA Cloud+ certification highlights the significance of various testing phases, including UAT, as part of the cloud deployment process to validate the system's readiness and functionality for end-users.

#### NEW QUESTION # 24

Which of the following cloud deployment strategies is best for an organization that wants to run open-source workloads with other organizations that are sharing the cost?

- **A. Community**
- B. Public
- C. Hybrid
- D. Private

**Answer: A**

Explanation:

A community cloud deployment strategy is best for an organization that wants to run open-source workloads with other organizations while sharing the cost. Community clouds are collaborative efforts where infrastructure is shared between several organizations with common concerns, which could be regulatory, security, or compliance-related.
