

300-740 Exam Sample - Exam 300-740 Bible

- Testlet

SCAZT 300-740 Practice Exam Questions.

Grab an understanding from these [Cisco 300-740](#) sample questions and answers and improve your 300-740 exam preparation towards attaining a Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Certification. Answering these sample questions will make you familiar with the types of questions you can expect on the actual exam. Doing practice with SCAZT CCNP Security questions and answers before the exam as much as possible is the key to passing the Cisco 300-740 certification exam.

300-740 Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions:-

01. Determine cloud platform security policies based on application connectivity requirements might involve:

- Implementing network peering
- Configuring firewalls and access lists
- Selecting appropriate cloud service models (IaaS, PaaS, SaaS)
- Avoiding the use of security groups and ACLs

02. In the context of network protocol blocking, which of the following statements is true?

- All network protocols should be allowed to ensure maximum compatibility
- Blocking protocols like FTP can prevent unauthorized data transfers
- Protocol blocking is an outdated practice that reduces network efficiency
- Blocking protocols like BitTorrent can limit the spread of malware

03. To allow users a seamless and secure login experience across multiple applications, many organizations configure _____ using an identity provider connection.

- firewalls
- antivirus software
- VPNs
- SAML/SSO

04. _____ policies are crucial for restricting access to network resources based on the security health of a device.

- Encryption

BTW, DOWNLOAD part of VCE4Plus 300-740 dumps from Cloud Storage: <https://drive.google.com/open?id=1cfLm09hx-D-mCrfWaAptumYR2ZWP3R>

Our 300-740 study materials can help you achieve your original goal and help your work career to be smoother and your family life quality to be better and better. There is no exaggeration to say that you will be confident to take part in you exam with only studying our 300-740 practice dumps for 20 to 30 hours. And thousands of candidates have achieved their dreams and ambitions with the help of our outstanding 300-740 training materials.

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, our company as the famous brand, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our 300-740 Exam Torrent in order to keeps latest information about 300-740 exam.

Cisco 300-740 Web-Based Practice Exam Questions Software

Want to get a high-paying job? Hurry to get an international 300-740 certificate! You must prove to your boss that you deserve his salary. You may think that it is not easy to obtain an international certificate. Don't worry! Our 300-740 Guide materials can really help you. And our 300-740 exam questions have helped so many customers to pass their exam and get according certifications. You can just look at the warm feedbacks to us on the website.

Cisco Designing and Implementing Secure Cloud Access for Users and

Endpoints Sample Questions (Q95-Q100):

NEW QUESTION # 95

The screenshot displays the Cisco Secure Cloud Analytics interface. The top section shows an alert titled "Heartbeat Connection Count" with a description: "Device has established new periodic connections with many remote devices. This alert uses the heartbeat observation and may indicate unauthorized FTP traffic or botnet activity." The alert is categorized under MITRE Tactics as "Command And Control" and MITRE Techniques as "Non-Application Layer Protocol". The alert type priority is set to "High".

The "Device Outline" section shows the device IP as "ip-10-201-0-16.us-east-2.compute.internal". It lists various roles such as "Time Server", "Domain Controller", "Kerberos Node", "DNS Server", "Remote Desktop Server", and "Windows Server (Windows 2003 or older)". It also shows statistics like "Open Alerts: 3", "Int Connections: 250", and "Ext Connections: 14972".

The bottom section, "Supporting Observations", shows a table of heartbeat events. The table has columns for Time ID, Device ID, Remote IP, Protocol, and Number of connections. The data shows multiple connections from the device to various remote IP addresses over UDP port 53 (DNS).

Time ID	Device ID	Remote IP	Protocol	Number of ...	Heartbeat
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	80.88.128.8	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	211.136.117.108	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	211.136.117.101	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	202.108.44.85	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	172.16.16.198	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	218.2.135.2	53 (domain)	144	1
2023-05-27 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	202.108.44.55	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	202.108.44.55	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	218.2.135.2	53 (domain)	144	1
2023-05-28 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	211.136.117.105	53 (domain)	144	1
2023-05-26 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	211.136.117.105	53 (domain)	144	1
2023-05-26 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	202.108.44.55	53 (domain)	144	1
2023-05-23 00:00:00	ip-10-201-0-16.us-east-2.compute.internal	211.136.117.105	53 (domain)	144	1

Refer to the exhibit. An engineer is investigating an unauthorized connection issue using Cisco Secure Cloud Analytics. Which two actions must be taken? (Choose two.)

- A. Validate the IDS logs
- B. Inform the incident management team.
- C. Reinstall the host from scratch.
- D. Reinstall the host from a recent backup.
- E. Block the unwanted IP addresses on the firewall

Answer: B,E

Explanation:

The Secure Cloud Analytics alert indicates suspicious heartbeat-based connections from an internal server (ip-10-201-0-16) to multiple suspicious IPs over UDP/port 53 (DNS). This behavior suggests command-and-control (C2) activity or botnet communications.

B: Alerting the incident response (IR) team is a critical next step in escalating a verified threat as per SCAZT Section 6 (Threat Response, Pages 114-117).

D: Blocking the identified malicious IPs on perimeter firewalls or network access control devices is an appropriate containment step to disrupt communication.

Reinstallation (A/E) is premature without a full forensic investigation. Validating IDS logs (C) is useful but not immediate response-focused compared to actions B and D.

NEW QUESTION # 96

Refer to the exhibit. An engineer must configure a global allow list in Cisco Umbrella for the cisco.com domain. All other domains must be blocked. After creating a new policy and adding the cisco.com domain, the engineer attempts to access a site outside of cisco.com and is successful. Which additional Security Settings action must be taken to meet the requirement?

- A. Limit Content Access.
- B. Apply Destination List.
- C. Enforce SafeSearch.
- **D. Enable Allow-Only Mode**

Answer: D

Explanation:

When configuring Cisco Umbrella to block all traffic except to domains explicitly allowed (e.g., cisco.com), the "Allow-Only Mode" must be enabled. This setting overrides default behavior and ensures that only entries listed in the allow list are accessible-everything else is automatically blocked. According to SCAZT Section

1 (Cloud Security Architecture, Pages 16-19), enabling Allow-Only Mode is crucial for strict outbound DNS filtering.

Without this setting, the system allows access to all domains not explicitly blocked, which is why the engineer was able to access non-cisco.com domains despite defining an allow list.

Reference: Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT), Section 1, Pages 16-19

NEW QUESTION # 97

Security policies for remote users using VPN or application-based access should focus on:

- **A. Ensuring all data is encrypted during transit**
- B. Providing unrestricted access to internal resources
- **C. Verifying user identity and device security before access**
- D. Using public Wi-Fi networks without any security measures

Answer: A,C

NEW QUESTION # 98

After containing a cybersecurity threat, the next step is to _____ the damage or vulnerability to prevent future incidents.

- A. escalate
- B. overlook
- **C. remediate**
- D. exacerbate

Answer: C

NEW QUESTION # 99

An administrator must deploy an endpoint posture policy for all users. The organization wants to have all endpoints checked against antimalware definitions and operating system updates and ensure that the correct Secure Client modules are installed properly. How must the administrator meet the requirements?

- A. Configure the WLC to provide local posture services, and configure Cisco ISE to receive the compliance verification from the WLC to be used in an authorization policy.
- **B. Create the required posture policy within Cisco ISE, configure redirection on the NAD, and ensure that the client provisioning policy is correct.**
- C. Identify the antimalware being used, create an endpoint script to ensure that it is updated, and send the update log to Cisco ISE for processing.
- D. Create an ASA Firewall posture policy, upload the Secure Client images to the NAD, and create a local client provisioning portal.

Answer: B

Explanation:

Cisco Identity Services Engine (ISE) is the central policy engine for posture assessments. As outlined in the SCAZT guide (Section 2: User and Device Security, Pages 39-44), to implement posture assessment and client provisioning correctly, an administrator must create posture policies within Cisco ISE and configure the Network Access Device (NAD)-such as a switch, WLC, or firewall-for redirection. This redirection sends the user to the posture portal, where ISE verifies the Secure Client modules (such as AnyConnect) and enforces compliance with antivirus signatures and OS updates.

ISE evaluates endpoint health based on pre-defined compliance rules and supports automatic remediation via the client provisioning portal. This ensures consistency and policy enforcement across distributed environments.
