

2V0-15.25 High Passing Score | 2V0-15.25 New Cram Materials

Actual4Exams informs you that the VMware Cloud Foundation 9.0 Support (2V0-15.25) questions regularly change the content of the VMware Cloud Foundation 9.0 Support real exam. Therefore, you must stay informed as per these changes to save time, money, and mental peace. As was already discussed, Actual4Exams satisfies the needs of VMware 2V0-15.25 Exam candidates. The customer will receive updates of VMware Cloud Foundation 9.0 Support (2V0-15.25) real dumps for up to 365 days after buying the product.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.
Topic 2	<ul style="list-style-type: none">Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
Topic 3	<ul style="list-style-type: none">IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
Topic 4	<ul style="list-style-type: none">Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 5	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.

2V0-15.25 New Cram Materials - Verified 2V0-15.25 Answers

VMware Cloud Foundation 9.0 Support (2V0-15.25) Practice exams (desktop and web-based) are designed solely to help you get your VMware Cloud Foundation 9.0 Support (2V0-15.25) certification on your first try. Our VMware 2V0-15.25 mock test will help you understand the VMware Cloud Foundation 9.0 Support (2V0-15.25) exam inside out and you will get better marks overall. It is only because you have practical experience of the VMware Cloud Foundation 9.0 Support (2V0-15.25) exam even before the exam itself.

VMware Cloud Foundation 9.0 Support Sample Questions (Q34-Q39):

NEW QUESTION # 34

An administrator is creating an additional Organization for All Apps within VMware Cloud Foundation (VCF) Automation. After logging into the VCF Automation Provider Management Portal UI, the administrator is only able to create new Organizations for All Apps. What action can the administrator take to resolve the issue and complete the task?

- A. Create the new Organization for VM Apps using the VCF Automation API.
- B. Delete the existing Organization for VM Apps using the VCF Automation API.
- **C. Enable the creation of new Organization for VM Apps feature in the Provider Management Portal UI.**
- D. Delete any existing Organizations for All Apps from the Provider Management Portal UI.

Answer: C

Explanation:

In VMware Cloud Foundation (VCF) 9.0 Automation, Provider Administrators manage which types of Organizations can be created:

- * VM Apps Organizations
- * All Apps Organizations

These capabilities are controlled by Feature Flags within the VCF Automation Provider Management Portal

. If the administrator logs in and only sees the ability to create All Apps Organizations, it means that the feature flag enabling VM Apps Organization creation has not been turned on.

VCF Automation requires the Provider Admin to explicitly enable creation of VM Apps Organizations, because doing so exposes VM-centric consumption models and allows the environment to differentiate between VM-only and hybrid (VM + Kubernetes) application deployments.

Therefore, the administrator simply needs to navigate to:

Provider Management Portal # Administration # Feature Flags # Enable "Create VM Apps Organizations" Option A (creating via API) is unnecessary-the UI will support it once the feature is enabled.

Option B (deleting existing VM Apps orgs) has no effect on feature availability.

Option C (deleting All Apps orgs) is unrelated and would not unlock VM Apps org creation.

NEW QUESTION # 35

An administrator attempts to add a new user (provideradmin05) within the VMware Cloud Foundation (VCF) Automation Provider Management Portal, however provideradmin05 cannot be found for import.

The following information is provided:

- * The existing VCF Fleet uses VMware Identity Broker (VIDB) for single sign-on.
- * VIDB uses Active Directory as the identity provider.
- * A group named VCFA_ProviderAdmins was created in Active Directory, populated with the appropriate user accounts and synchronized with VIDB.
- * Five days later provideradmin05 was added to VCFA_ProviderAdmins.

What will resolve this issue?

- A. In the VCF Automation Provider Management Portal, enable the Advanced Rights Bundle Mode.
- **B. In VCF Operations, manually resync the directory.**
- C. In VCF Operations, disable VCF SSO for VCF Automation.
- D. In the VCF Automation Provider Management Portal, import provideradmin05 as an LDAP user.

Answer: B

Explanation:

VMware Cloud Foundation (VCF) 9.x uses VMware Identity Broker (VIDB) as the central identity provider for the entire VCF fleet. VIDB synchronizes user and group metadata from the connected enterprise identity source, in this case Active Directory. When a user is added to an AD group after the group was already synced into VIDB, VIDB does not automatically resync group membership on demand unless a directory synchronization is performed.

In this scenario, the group VCFA_ProviderAdmins was synchronized five days earlier. When the new user provideradmin05 was later added to the AD group, VIDB-and therefore the VCF Automation Provider Management Portal-does not recognize that new user until an annual directory resynchronization occurs from VCF Operations.

This operation forces VIDB to:

- * Requery Active Directory
- * Update group membership information
- * Repopulate available users for import into VCF Automation

Options B and D are incorrect because they do not influence Identity Broker directory synchronization. Option C (disable VCF

SSO) would break authentication and is not a valid solution.

NEW QUESTION # 36

An administrator discovers that a VMware Cloud Foundation (VCF) workload domain four-node vSAN cluster is experiencing a network partition. The workload domain vCenter displays a "vSAN cluster partition" warning. The performance across the cluster is degraded and the objects are showing as non-compliant.

What could be causing the network partition?

- A. The vSAN Witness service was added to the vMotion network.
- B. IGMP snooping is disabled on the multicast group.
- C. Jumbo frames are configured on the vSphere distributed switch (VDS).
- **D. The VLAN was changed on the physical switch port.**

Answer: D

Explanation:

AvSAN cluster network partition occurs when vSAN nodes cannot communicate over the designated vSAN network. In VMware Cloud Foundation workload domains, the vSAN network relies on L2 adjacency, consistent VLAN configuration, and stable multicast/BUM behavior (in older versions). VCF 9.0 uses unicast-mode vSAN, so multicast-related issues (such as IGMP snooping configuration) are no longer relevant.

A network partition can occur when the VLAN ID on the physical switch port differs from the VLAN configured on the vSphere Distributed Switch (VDS) for the vSAN VMkernel adapters. The documentation emphasizes that consistent VLAN configuration across the physical and virtual network is required for proper vSAN cluster communication. If a switch port is reconfigured intentionally or accidentally to use a different VLAN, the node becomes isolated from the rest of the vSAN cluster, causing:

- * "vSAN cluster partition" warnings in vCenter

- * degraded performance

- * objects marked as non-compliant

- * resyncs that cannot complete

Option A (IGMP snooping) does not apply because modern vSAN uses unicast, not multicast.

Option C (Jumbo frames) would cause packet loss only if inconsistently configured, but it does not cause a full network partition.

Option D (vSAN Witness on vMotion) is relevant only for stretched clusters and does not cause a partition in a standard four-node cluster.

NEW QUESTION # 37

An administrator is asked to create a second provider gateway (provider gateway 02) in VMware Cloud Foundation (VCF) Automation Region-A.

After launching the Create Provider Gateway workflow in the VCF Automation Provider Management Portal, no Tier-0 Gateway is available for assignment.

How would you resolve this issue?

- A. Log into the NSX Manager, create a new Tier-1 Gateway.
- B. Create a new Region.
- **C. Log into the NSX Manager, create a new TO Gateway.**
- D. Retry the Create Provider Gateway workflow.

Answer: C

Explanation:

In VMware Cloud Foundation 9.0, a Provider Gateway in VCF Automation is always backed by an existing Tier-0 or Tier-0 VRF gateway in NSX. When the administrator launches the Create Provider Gateway workflow and no Tier-0 gateways appear for assignment, this indicates that VCF Automation cannot discover any valid Tier-0 gateways in the associated region.

The VMware Cloud Foundation 9.0 documentation explicitly states that before adding a Provider Gateway, an administrator must first create an Active-Standby Tier-0 Gateway in NSX Manager. The Provider Gateway workflow only lists Tier-0 gateways that already exist and are properly configured in NSX. If none are present, the list will be empty.

From the documentation: "To add a provider gateway, first you must create an Active Standby tier-0 gateway in the NSX Manager associated with the region to back it." Provider gateways in VCF Automation are discovered from these preexisting Tier-0 gateways and cannot be created until they exist.

Creating a Tier-1 gateway (Option B) does not satisfy the requirement because Provider Gateways must map specifically to Tier-0, not Tier-1. Retrying the workflow (Option D) will not resolve the issue because the Tier-

0 backing resource is missing. Creating a new region (Option A) is unnecessary unless required for other organizational reasons, and it still would not produce a Tier-0 gateway.

Therefore, the correct and verified solution is to log in to NSX Manager and create the required Tier-0 gateway, after which it will appear in the Provider Gateway creation workflow.

NEW QUESTION # 38

A user attempts to deploy a catalog item into a vSphere Namespace in a VMware Cloud Foundation (VCF) Automation Organization for All Apps. The catalog item will not deploy into zone3.

The following information is provided:

* The vSphere Supervisor has three zones (zone1, zone2, zone3).

* The user has successfully deployed the catalog item into zone1 and zone2 of the vSphere Namespace.

What is the cause of this issue?

- A. The user does not have Project Advanced User role for the vSphere Namespace.
- **B. The vSphere Namespace does not include zone3.**
- C. The vSphere Namespace is assigned the default large vSphere Namespace Class.
- D. The user does not have the Project User role for the vSphere Namespace.

Answer: B

Explanation:

In VMware Cloud Foundation (VCF) Automation for All Apps, a vSphere Namespace can span multiple Supervisor Zones. However, workloads—including catalog item deployments—can only be deployed into zones that are explicitly assigned to that Namespace. The user in the scenario successfully deploys into zone1 and zone2, which confirms that those zones are correctly associated with the Namespace.

The failure to deploy into zone3, while deployments into the other zones work, strongly indicates that zone3 is not part of the Namespace configuration.

This behavior matches how Supervisor Zones function:

* A zone must be added to the Namespace in Supervisor configuration.

* If the zone is not associated, VCF Automation will not present it as an eligible deployment location, and deployment into that zone fails.

Option A and D (project roles) are incorrect because insufficient permissions would prevent deployment into any zone, not a single missing zone.

Option B (Namespace Class) is irrelevant because Namespace Classes define resource limits, not which Supervisor Zones the Namespace is mapped to.

NEW QUESTION # 39

.....

We often regard learning as a torture. Actually, learning also can become a pleasant process. With the development of technology, learning methods also take place great changes. Take our 2V0-15.25 practice material for example. All of your study can be completed on your computers because we have developed a kind of software which includes all the knowledge of the 2V0-15.25 exam. The simulated and interactive learning environment of our test engine will greatly arouse your learning interests. You will never feel boring and humdrum. Your strong motivation will help you learn effectively. If you are tired of memorizing the dull knowledge point, our 2V0-15.25 Test Engine will assist you find the pleasure of learning. Time is priceless. Learn something when you are still young. Then you will not regret when you are growing older.
