International Code Council Commercial Mechanical Inspector Sample Questions (Q36-Q41):

NEW QUESTION # 36

Horizontal terminations for mechanical draft systems that are adjacent to public walkways shall be located a minimum of _____ feet above grade.

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The fuel gas venting provisions state that the exit terminals of mechanical draft systems shall be not less than 7 feet above grade where located adjacent to public walkways. Therefore, A is the correct answer.

NEW QUESTION # 37

When a permit is issued, the code requires that one set of approved plans and specifications be returned to the applicant. This set of plans and specifications shall be:

- A. returned to the architect.
- B. retained by the applicant for at least one year after the job is finished in the event modifications are made.
- C. kept on the building site.
- D. filed with the county clerk or jurisdiction to properly record the property.

Answer: C

Explanation:

Under the ICC administrative provisions used with the mechanical code, one approved set is retained by the code official, and one approved set is returned to the applicant. The returned set must be kept on the site of the building or job while the authorized work is in progress. That directly matches Option A . It does not require return to the architect, filing with the county clerk, or retention for one year after completion.

NEW QUESTION # 38

Given: An industrial water heater boiler has a manufacturer's listing of 18 inches wall clearance. It is installed with a protective wall assembly of 24-gauge sheet metal spaced out 1 inch from the wall.

The reduced installation clearance from the wall for this appliance is _____ inches.

- A. 0
- B. [option text not fully visible in the material you sent]
- C. [option text not fully visible in the material you sent]
- D. 1

Answer: C

Explanation:

ICC clearance-reduction tables allow a listed clearance of 18 inches to be reduced to 9 inches where 24- gauge sheet metal is installed with a 1-inch ventilated airspace from the combustible wall. Therefore the correct answer is the option corresponding to 9 inches , which is B in your set.

NEW QUESTION # 39

To test for tightness, a consumer's gas piping should never be filled with:

- A. dry air.
- B. air.
- C. oxygen.
- D. inert gas.

Answer: C

Explanation:

The IFGC section on test medium states that the test medium shall be air, nitrogen, carbon dioxide or an inert gas , and specifically states that oxygen shall not be used as a test medium . That makes C the correct answer.

NEW QUESTION # 40

Air mechanically exhausted from a room must be:

- A. recirculated.

- B. discharged into the attic.
- **C. discharged to the outdoors.**
- D. filtered.

Answer: C

Explanation:

The IMC requires air removed by a mechanical exhaust system to be discharged outdoors to an approved location and not be readily drawn back into the building. That makes D correct. The code does not permit general exhaust air to terminate in an attic, and it does not make filtering or recirculation the default rule for mechanically exhausted air.

NEW QUESTION # 41
