

Pass Guaranteed Quiz Juniper - JN0-351 - Enterprise Routing and Switching, Specialist (JNCIS-ENT) High Hit-Rate Pass Guaranteed

DOWNLOAD the newest Itcertmaster JN0-351 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1DuU8fELiGEc1ncq_YZXkxZigdwELwZYf

The students can give unlimited to track the performance of their last given tests in order to see their mistakes and try to avoid them while giving the final test. Customers of Itcertmaster will receive updates till 1 year after their purchase. Anyone can try a free demo of the Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) practice material before making purchase. There is a 24/7 available support system that assists users whenever they are stuck in any problem or issues. This product is a complete package and a blessing for those who want to pass the Juniper JN0-351 test in a single try.

We provide three versions of JN0-351 study materials to the client and they include PDF version, PC version and APP online version. Different version boosts own advantages and using methods. The content of JN0-351 exam torrent is the same but different version is suitable for different client. For example, the PC version of JN0-351 Study Materials supports the computer with Windows system and its advantages includes that it simulates real operation JN0-351 exam environment and it can simulates the exam and you can attend time-limited exam on it. Most candidates liked and passed with this version.

Valid Brindumps Juniper JN0-351 Files | JN0-351 Latest Training

If you are sure that you want to pass Juniper certification JN0-351 exam, then your selecting to purchase the training materials of Itcertmaster is very cost-effective. Because this is a small investment in exchange for a great harvest. Using Itcertmaster's test questions and exercises can ensure you pass Juniper Certification JN0-351 Exam. Itcertmaster is a website which have very high reputation and specifically provide simulation questions, practice questions and answers for IT professionals to participate in the Juniper certification JN0-351 exam.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 exam.

Topic 2	• Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.
Topic 3	• Spanning Tree: Networking professionals explore the principles and advantages of the Spanning Tree Protocol (STP) to ensure loop-free topologies in Layer 2 networks.
Topic 4	• OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which two types of tunnels are able to be created on all Junos devices? (Choose two.)

- A. STP
- B. GRE
- C. IP-IP
- D. IPsec

Answer: B,C

Explanation:

GRE tunnels can be created on all Junos devices. GRE is a tunneling protocol that encapsulates a wide variety of network layer protocols inside virtual point-to-point links.

IP-IP tunnels can also be created on all Junos devices. IP-IP tunneling is used to encapsulate IP packets within IP packets, providing a simple way to tunnel IP traffic.

NEW QUESTION # 43

You want to prevent rogue BPDUs from lab devices reaching the internal through the Lab_Switch device.

Referring to the exhibit, what should be done to accomplish this task?

- A. Configure protocols rstp with the bpdud-block-on-edge parameter for interface xe-0/2/0
- B. Configure the three lab ports as edge ports
- C. Configure the three lab ports under the protocols layer2-control bpdud-block hierarchy on the switch
- D. Configure an input filter on interface xe-0/2/0 to discard the RSTP packets

Answer: C

NEW QUESTION # 44

You have configured the four EX Series switches with RSTP, as shown in the exhibit. You discover that whenever a link between switches goes up or down, the switches take longer than expected for RSTP to converge, using the default settings.

In this scenario, which action would solve the delay in RSTP convergence?

- A. The bridge priority for EX-4 must be set at 4000.
- B. The max-age must be increased to 20
- C. The force-version must be removed.
- D. The hello-time must be increased.

Answer: C

Explanation:

The exhibit shows the configuration of RSTP on EX-4, which has the command force-version stp.

This command forces the switch to use the legacy STP protocol instead of RSTP, even though the switch supports RSTP. This

means that EX-4 will not be able to take advantage of the faster convergence and enhanced features of RSTP, such as edge ports, link type, and proposal/agreement sequence. The other switches in the network are likely to be running RSTP, as it is the default protocol for EX Series switches. Therefore, there will be a compatibility issue between EX-4 and the other switches, which will result in longer convergence times and suboptimal performance. The switch will also generate a warning message that says "Warning: STP version mismatch with neighbor" when it receives a BPDU from a RSTP neighbor.

To solve this problem, the force-version command must be removed from EX-4, so that it can run RSTP natively and interoperate with the other switches in the network. This will enable faster convergence and better stability for the network topology. To remove the command, you can use the delete protocols rstp force-version command in configuration mode.

NEW QUESTION # 45

Which statement is correct about the IS-IS ISO NET address?

- A. The Area ID must match on all devices within a L2 area.
- B. You can only define a single ISO NET address per device.
- C. An ISO NET address must be unique for each device in the network.
- D. An ISO NET address defined with a system ID of 0000.0000.0000 must be selected as the DIS.

Answer: C

Explanation:

An ISO NET address is a type of network address used by the IS-IS routing protocol. It identifies a point of connection to the network, such as a router interface, and is also called a Network Service Access Point (NSAP)¹.

An ISO NET address consists of three parts: an area ID, a system ID, and a selector². The area ID identifies the IS-IS area to which the device belongs. The system ID uniquely identifies the device within the area. The selector identifies a specific service or function on the device, such as routing or management².

An ISO NET address must be unique for each device in the network, because it is used by IS-IS to establish adjacencies, exchange routing information, and compute shortest paths². If two devices have the same ISO NET address, they will not be able to communicate with each other or with other devices in the network. Therefore, it is important to assign different ISO NET addresses to each device in the network.

NEW QUESTION # 46

In addition to the MAC addresses, what information is stored in the bridging table? (Choose two.)

- A. ether type details
- B. interface details
- C. MAC learned time
- D. preamble of Ethernet packet

Answer: B,C

NEW QUESTION # 47

.....

For candidates who preparing for the exam, knowing the latest information for the exam is quite necessary. JN0-351 exam cram of us can offer free update for 365 days for you, and we have skilled professionals examine the update every day, once we have the update version, we will send you the first time. JN0-351 training materials is not only high-quality, but also contain certain quantity, therefore they will be enough for you to pass the exam. We have a professional service team, and the service staffs have professional knowledge for JN0-351 Exam Materials, if you have any questions, you can consult us.
