## CheckPoint 156-836 Exam | 156-836 Latest Braindumps Ppt - Help you Prepare for 156-836 Exam Efficiently

The advantages of our 156-836 cram guide is plenty and the price is absolutely reasonable. The clients can not only download and try out our products freely before you buy them but also enjoy the free update and online customer service at any time during one day. The clients can use the practice software to test if they have mastered the 156-836 Test Guide and use the function of stimulating the test to improve their performances in the real test. So our products are absolutely your first choice to prepare for the test 156-836 certification.

### CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q22-Q27):

#### NEW QUESTION # 22

Which feature is used to force trusted non-F2F traffic into the fully accelerated path for handling by SecureXL.

- A. rate limiting
- B. Fast Accelerator
- **C. SecureXL**
- D. hypersync

**Answer: C**

Explanation:

#### Explanation

SecureXL is typically used to accelerate trusted traffic, including non-F2F (face-to-face) traffic, through a secure, fast path.

#### NEW QUESTION # 23

In a Maestro Dual Site environment, what is the definition of the term Active Site.

- A. The Active Site is the site currently handling the enforcement on traffic passing for a specific SG. Connections are synced within the SGMs in the Active Site.
- B. There is no such thing as an active site. In a Dual Site environment, traffic is load balanced.
- C. The Active Site is the site that is not handling any traffic for the specific SG, but its connections are synced to its SGMs from the MHOs to be ready in the event of a failover.
- D. The Active Site is the site where the SMO Master exists.

#### Answer: A

Explanation:

Explanation

In a Maestro Dual Site environment, there are two sites that can host Security Group Members (SGMs) for each Security Group (SG). The Active Site is the one that is currently processing the traffic for a specific SG, while the Standby Site is the one that is ready to take over in case of a failover. The Active Site and the Standby Site can be different for different SGs, depending on the load balancing and failover policies. The Active Site and the Standby Site are synchronized by the Maestro Orchestrators (MHOs) using the Site-Sync port and VLANs.

#### NEW QUESTION # 24

At a minimum, how many management and Uplink ports does a SG require?

- A. Neither are required.
- B. Two of each.
- C. Only one of the two interfaces is needed for the Security Group.
- D. One each.

#### Answer: D

Explanation:

Explanation

A Security Group (SG) requires at least one management port and one uplink port to function properly. The management port is used to connect the SG to the Maestro Hyperscale Orchestrator (MHO) and the customer's management infrastructure, such as SmartConsole or SmartDomain Manager. The uplink port is used to connect the SG to the customer's network infrastructure, such as switches, routers, or firewalls. The uplink port is also used to send and receive traffic from the customer's network to the SG.

#### NEW QUESTION # 25

Which feature is used to force trusted non-F2F traffic into the fully accelerated path for handling by SecureXL.

- A. rate limiting

- B. Fast Accelerator
- **C. SecureXL**
- D. hypersync

#### Answer: C

Explanation:

SecureXL is typically used to accelerate trusted traffic, including non-F2F (face-to-face) traffic, through a secure, fast path.

#### NEW QUESTION # 26

After you import the R81.10 software package, what do you use to verify that it is possible to upgrade an MHO or SG?

- **A. Run the Pre-Upgrade Verifier to make sure it is possible to upgrade**
- B. Nothing. CPUSE will run a verification during the upgrade process to ensure the package is compatible.
- C. Run HCP. One of the tests will list upgrade eligibility status for the MHO or SG.
- D. The package is verified during the import process and a warning or error will be displayed at that time.

#### Answer: A

Explanation:

Explanation

The Pre-Upgrade Verifier is a tool that checks the compatibility and readiness of the Maestro environment for the upgrade process. It verifies the current version, the target version, the hardware requirements, the configuration settings, and the license validity of the Maestro Orchestrators and the Security Groups. It also identifies any potential issues or risks that might affect the upgrade and provides recommendations on how to resolve them. The Pre-Upgrade Verifier should be run before importing the R81.10 software package and before performing the actual upgrade.
