NEW QUESTION # 33
You are designing a new network for Company X and one of the new cybersecurity policy requirements is that all remote user endpoints must always be connected and protected Which FortiSASE component facilitates this always-on security measure?

- A. site-based deployment
- B. thin-branch SASE extension
- C. inline-CASB
- D. unified FortiClient

Answer: D

Explanation:

The unified FortiClient component of FortiSASE facilitates the always-on security measure required for ensuring that all remote user endpoints are always connected and protected.

Unified FortiClient:

FortiClient is a comprehensive endpoint security solution that integrates with FortiSASE to provide continuous protection for remote user endpoints.

It ensures that endpoints are always connected to the FortiSASE infrastructure, even when users are off the corporate network.

Always-On Security:

The unified FortiClient maintains a persistent connection to FortiSASE, enforcing security policies and protecting endpoints against threats at all times.

This ensures compliance with the cybersecurity policy requiring constant connectivity and protection for remote users.

NEW QUESTION # 34

Refer to the exhibits.

WiMO-Pro and Win7-Pro are endpoints from the same remote location. WiMO-Pro can access the internet though FortiSASE, while Wm7-Pro can no longer access the internet Given the exhibits, which reason explains the outage on Wm7-Pro?

- A. Win7-Pro cannot reach the FortiSASE SSL VPN gateway
- B. Win-7 Pro has exceeded the total vulnerability detected threshold.
- C. The Win7-Pro device posture has changed.
- D. The Win7-Pro FortiClient version does not match the FortiSASE endpoint requirement.

Answer: B

Explanation:

Based on the provided exhibits, the reason why the Win7-Pro endpoint can no longer access the internet through FortiSASE is due to exceeding the total vulnerability detected threshold. This threshold is used to determine if a device is compliant with the security requirements to access the network.

* Endpoint Compliance:

* FortiSASE monitors endpoint compliance by assessing various security parameters, including the number of vulnerabilities detected on the device.

* The compliance status is indicated by the ZTNA tags and the vulnerabilities detected.

* Vulnerability Threshold:

* The exhibit shows that Win7-Pro has 176 vulnerabilities detected, whereas Win10-Pro has 140 vulnerabilities.

* If the endpoint exceeds a predefined vulnerability threshold, it may be restricted from accessing the network to ensure overall network security.

* Impact on Network Access:

* Since Win7-Pro has exceeded the vulnerability threshold, it is marked as non-compliant and subsequently loses internet access through FortiSASE.

* The FortiSASE endpoint profile enforces this compliance check to prevent potentially vulnerable devices from accessing the

internet.

FortiSASE 23.2 Documentation: Explains how vulnerability thresholds are used to determine endpoint compliance and access control.
