

# JN0-481 Accurate Answers - Online JN0-481 Test

What's more, part of that Test4Sure JN0-481 dumps now are free: <https://drive.google.com/open?id=1EUM-GUjrptELzVzg74tRpRNM1ogD5Fb>

Our JN0-481 practice materials are suitable for people of any culture level, whether you are the most basic position, or candidates who have taken many exams, is a great opportunity for everyone to fight back. According to different audience groups, our products for the examination of the teaching content of a careful division, so that every user can find a suitable degree of learning materials. More and more candidates choose our JN0-481 Practice Materials, they are constantly improving, so what are you hesitating about?

Data Center, Specialist (JNCIS-DC) (JN0-481) questions is a comprehensive solution for JN0-481 exam preparation, offering a wide range of features designed to help you succeed. The Juniper exam is an essential milestone to achieve the JN0-481 Certification. With JN0-481 exam dumps, you'll have access to Juniper JN0-481 actual questions that are enough to crack the JN0-481 exam in a short time.

>> JN0-481 Accurate Answers <<

## Latest Released Juniper JN0-481 Accurate Answers: Data Center, Specialist (JNCIS-DC) | Online JN0-481 Test

Our Data Center, Specialist (JNCIS-DC) study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit JN0-481 exam questions. It points to the exam heart to solve your difficulty. So high quality materials can help you to pass your exam effectively, make you feel easy, to achieve your goal. With the JN0-481 Test Guide use feedback, it has 98%-100% pass rate. That's the truth from our customers. And it is easy to use for you only with 20 hours' to 30 hours' practice. After using the JN0-481 test guide, you will have the almost 100% assurance to take part in an examination. With high quality materials and practices, you will get easier to pass the exam.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Which statement is true when onboarding a Juniper Networks device using a Juniper Apstra ZTP server?

- A. The State can be set In the ztp.Json file on the ZTP server.
- B. The Management IP address cannot be predetermined.
- C. The Device Key to be used can be set In the dhcpd.conf file on the ZTP server.
- D. The Hostname will be the serial-number of the device.

**Answer: A**

Explanation:

The `ztp.json` file on the Apstra ZTP server contains the configuration parameters for each device that is onboarded using ZTP. One of the parameters is the State, which can be one of the following values: `init`, `ready`, `in_progress`, `done`, `error`, or `disabled`. The State indicates the current status of the device in the ZTP process. For example, if the State is `ready`, it means that the device is ready to be onboarded by the Apstra ZTP server. If the State is `done`, it means that the device has completed the ZTP process and is managed by the Apstra server. The State can be manually set or changed in the `ztp.json` file to control the behavior of the device during ZTP.

### NEW QUESTION # 53

Juniper Apstra provides five different predefined user roles. Given this information, what is the main difference between the administrator and the user role?

- A. The user role can only be assigned to specific blueprints.
- **B. The user role cannot make any changes to other user types.**
- C. The user role can only make changes to the view role.
- D. The user role can make changes to any other role.

**Answer: B**

Explanation:

Apstra role-based access control separates fabric operations from identity and authorization administration. The administrator role includes full permissions, including the ability to manage users and roles (for example, creating users, assigning permissions, and creating/cloning/editing custom roles where allowed). This enables administrators to govern who can access the system and what they are permitted to change across all blueprints and system settings.

The user role, in contrast, is designed for day-to-day fabric work: viewing and editing supported blueprint elements and operational objects within the scope permitted by the role, but not administering other users' access or modifying the role structure itself. In other words, a user can work on the network intent and operations, but cannot elevate privileges, change other users' roles, or otherwise manage user/role administration unless explicitly granted additional permissions through custom roles.

That makes option C the correct statement: the user role cannot make changes to other user types (that is, it lacks the permissions needed to administer identities/roles). Options A, B, and D do not reflect Apstra's RBAC model: roles are not primarily constrained "per blueprint" in that way, and users are not intended to modify other roles—those are administrator-level capabilities.

### NEW QUESTION # 54

You connect two single-homed servers using Juniper Apstra as shown in the exhibit. You are using the ERB design blueprint with two virtual networks in a common routing zone. In this scenario, which two types of VXLAN tunnels will be automatically created by the EVPN control plane? (Choose two.)

- A. EVPN signaled route Type-8 VXLAN tunnels
- **B. EVPN signaled route Type-2 VXLAN tunnels**
- **C. EVPN signaled route Type-3 VXLAN tunnels**
- D. EVPN signaled route Type-6 VXLAN tunnels

**Answer: B,C**

Explanation:

EVPN route Type-3 is used to advertise the IP address of the VTEP and the VNIs that it supports.

This allows the VTEPs to discover each other and form VXLAN tunnels for the VNIs that they have in common. EVPN route Type-2 is used to advertise the MAC and IP addresses of the hosts connected to the VTEPs. This allows the VTEPs to learn the MAC-to-IP bindings and the MAC-to-VTEP mappings for the hosts in the same VNI. Therefore, these two types of VXLAN tunnels will be automatically created by the EVPN control plane when using Juniper Apstra with the ERB design blueprint and two virtual networks in a common routing zone.

### NEW QUESTION # 55

What are three valid resource types supported within Juniper Apstra? (Choose three.)

- A. ASN pools
- B. VNI pools
- C. Routing zone pools
- D. Integer pools
- E. Interface pools

**Answer: A,B,D**

Explanation:

In Apstra 5.1, resources are values that must be allocated uniquely and consistently across a fabric so Apstra can render deterministic, conflict-free configurations. These values are managed through resource pools, which provide ranges (or sets) of assignable identifiers that Apstra can automatically allocate to blueprint elements during build and deployment.

Three valid resource pool types in Apstra are ASN pools, VNI pools, and integer pools. ASN pools supply Autonomous System Numbers used in IP fabric underlays (commonly eBGP in three-stage Clos), ensuring each device or role receives the correct AS assignment without manual tracking. VNI pools supply VXLAN Network Identifiers for overlay segmentation in EVPN-VXLAN fabrics. Apstra uses these to create scalable tenant segments where the VNI uniquely identifies the broadcast domain in the overlay, and Junos v24.4 devices (leaf VTEPs) are configured accordingly. Integer pools provide generic numeric values used mainly in Freeform-style designs or in situations where a template needs a consistent allocated integer (for example, a custom ID used by a configlet or another allocation-driven construct).

"Routing zone pools" and "interface pools" are not resource pool types in Apstra. Routing zones (VRFs) are blueprint design objects, and interfaces are physical/logical constructs, but neither is consumed as an allocatable "pool" resource type in the Apstra resource catalog model.

#### NEW QUESTION # 56

When working with logical devices, you specify where each port group is connected. In this scenario, which two Juniper Apstra UI options are available to the operator? {Choose two.}

- A. router
- B. firewall
- C. generic
- D. unused

**Answer: C,D**

Explanation:

When working with logical devices, you specify where each port group is connected by selecting the port group layout and the port speed and role (s) for each port group. The Juniper Apstra UI offers two options to the operator for the port group role: unused and generic.

Unused: This option means that the port group is not configured or used by Apstra. This can be useful for ports that are faulty, reserved, or not part of the data center fabric.

Generic: This option means that the port group is configured with a generic role that is not specific to any device type or function. This can be useful for ports that are used for testing, troubleshooting, or custom purposes.

#### NEW QUESTION # 57

.....

Many of our worthy customers have achieved success not only on the career but also on the life style due to the help of our Juniper JN0-481 study guide. You can also join them and learn our Juniper JN0-481 Learning Materials. You will gradually find your positive changes after a period of practices. Then you will finish all your tasks excellently. You will become the lucky guys if there has a chance.

**Online JN0-481 Test:** <https://www.test4sure.com/JN0-481-pass4sure-vce.html>

It's time to get serious if you want to validate your abilities and earn the Juniper JN0-481 certification, First of all, you'll receive the latest updated exam material free of charge within one-year from the time you book the JN0-481 study prep torrent, When you first contacted us with JN0-481 quiz torrent, you may be confused about our JN0-481 exam question and would like to learn more about our products to confirm our claims, So going though JN0-481 test exam will become one of the most important things in your life.
